NORD DRIVESYSTEMS GROUP

Headquarters and Technology Centre

- in Bargteheide,
near Hamburg

Industrial gear units

Gear unit motors

Electronic products

Frequency inverters, motor starters
and field distributors

Innovative drive solutions

- for more than 100 branches
of industry

Gear unit production

Motor production

Inverter production

7 production locations with cutting edge technology

- Produce gear units, motors, inverters, etc. for complete drive solutions from a single source

The map shown above is for information only and does not claim to be created for or applicable to any legal purpose. For this reason, we do not assume any liability for legality, correctness and completeness.

Subsidiaries and sales partners in 98 countries on 5 continents

- Provide local supplies
- Assembly centres
- Technical support
- and customer service

More than 4,000 employees worldwide

- Create customised solutions

Introduction

For many decades, NORD DRIVESYSTEMS has supplied drive units for use in potentially explosive environments. Since 2003 this range has also included specially designed gear units which comply with EU Ex directives (ATEX).

Over the past years a great deal of work has been invested in order to comply with other international regulations such as IEC Ex, EAC Ex as well as the specifications for the North American market.

This catalogue contains information about gear units, motors and inverters for use in gas or dust explosion protection.

The catalogue has a modular structure and if necessary can be compiled separately for gas or dust areas.

In addition, this catalogue provides a large amount of additional technical information and supplements catalogues

- catalogues G1000 (Geared Motors) and M7000 (Motors)
- the operating instructions B2000 for gear units and B1091 or B1091-1 for motors.

This catalogue provides assistance for use of software tools such as myNORD and NORDcad. The myNORD tool enables quick and simple verification of whether a particular drive is Ex compliant.

Certificates and declarations of conformity can be found on our homepage www.NORD.com - see ⇒ chapter **Documentation**  Page J 6-7

The nameplates shown in this catalog are examples only.

NORD Drivesystems assumes no responsibility for the up-to-dateness of the data contained on the nameplates.

Throughout the world; states, confederations of states or organisations define the technical requirements and the necessary standards for explosion protected devices.

The resulting variety is a barrier to trade and places great demands on globally active manufacturers. As a result, harmonized technical standards have been used to define uniform, supraregional standards. These are also used by countries which themselves have no individual legal regulation regarding explosion-protected drives.

NORD DRIVESYSTEMS is a globally active company which is able to produce motors, gear units and frequency inverters according to various Ex standards. To enable this, it cooperates closely with the DEKRA EXAM GmbH as well as with the Physikalisch-Technischen Bundesanstalt PTB and other international institutions.

Conformity of the products as well as production and quality control are ensured by regular audits, which are performed by the PTB as well as the company NANIO CCVE. This is completed by a wide range of examination of motors and gear units by the responsible bodies worldwide.

In addition to fulfilling purely technical specifications, the corresponding labelling of drive units as well as provisions of the required specific documentation is of great importance.

This enables NORD DRIVESYSTEMS not only to ensure the safe operation of plant and machinery with its specific products, but also the simple and smooth import of products into designated countries.

In the following sections of this Ex catalogue, products are differentiated according to the type of their certification. Four major acceptance systems are described in greater detail below.

Due to the complexity of this topic and for reasons of clarity, the following overview describes the facts which relate to selected products from NORD DRIVESYSTEMS. It does not claim to be complete or fully up-to-date.

Specific national specifications

European Union "ATEX"

For many decades, the EU has been using the ATEX technical standards to ensure the safe operation of machinery and equipment.

With its Ex specifications for mechanical devices regarding the former Directive 94/9/EG the EU acted as a pioneer at that time.

Scope of Application

EU member states + others such as Norway and Switzerland

Basis

Technical standards based on IEC standards
(IEC - International Electrotechnical Commission)

Based on ...

Directive 2014/34/EU relates to mechanical and electrical devices for use in explosion hazard areas.

(In addition to this directive, which directly relates to explosion protection, the Ecodesign, EMC and RoHS directives must also be complied with).

Ex standards

- for motors

- DIN EN 60079-0, DIN EN 60079-7, DIN EN 60079-31

- for inverters + starters

- DIN EN 60079-0:2012, DIN EN 60079-31:2019, DIN EN ISO 80079-36, DIN EN ISO 80079-37

- or gear units

- DIN EN ISO 80079-36:2016, DIN EN ISO 80079-37:2016

Documents

The suitability of the device for explosion protection is documented by:

- Type Test Certificate and Declaration of Conformity for Category 2 motors
- Declaration of Conformity for Category 3 motors
- Declaration of Conformity for gear units
- Official bodies involved:
 - Physikalisch-Technischen Bundesanstalt PTB
 - DEKRA EXAM

Audits: The production and quality control of NORD DRIVESYSTEMS is audited at regular intervals by a Notified Body according to the regulations of EU 2014/34.

Energy efficient motors

Energy efficiency requirements for motors:

According to Regulation 640/2009 motors for explosion protection (gas and dust) constitute an exception and are therefore not subject to requirements with regard to this. However, customers are increasingly specifying the use of IE2 and IE3 motors.

IECEx

IECEx approval can be helpful for the approval of explosion protected electrical equipment according to national standards.

Australia and New Zealand

Scope of Application

Basis

Based on ...

IECEx 01 IEC Scheme for the Certification to Standards for Electrical Equipment for "Explosive Atmospheres (IECEx Scheme) - Basic Rules" and

IECEx 02 IEC Scheme for the Certification to Standards for Electrical Equipment for "Explosive Atmospheres (IECEx Scheme) - Rules of Procedure"

- IEC 60079-0 Explosive atmospheres
 - Part 0: Equipment - General requirements
- IEC 60079-31 Explosive atmospheres
 - Part 31: Equipment dust ignition protection by enclosure "t"

- ISO 80079-36 Non-electrical equipment for explosive atmospheres - Basic method and requirements
 - Part 36:
- ISO 80079-37 Non-electrical equipment for explosive atmospheres - Non electrical type of protection constructional safety "c", control of ignition source "b", liquid immersion "k"
 - Part 37:

- Official bodies involved:
 - DEKRA EXAM and PTB

Ex standards - for motors

- for gear units

Documents

Audits: IECEx audits by Ex- testing laboratories and (Ex-certification bodies) are mandatory.
Performed by the PTB as the notified body.

Energy efficiency requirements for motors:

From the point of view of the IECEx there are neither requirements nor restrictions with regard to energy efficiency classes. NORD supplies motors with efficiency classes IE1 and IE2 with IECEx approval.

Currently, Getriebbau NORD does not offer EX gear units according to IECEx.

A combination of an IECEx motor and a gear unit, complying with EU standard, is possible, see
⇒  page 4.

Energy efficient motors

Notice

Specific national specifications

EAC EX

EAC (abbreviation for EurAsian Conformity) is a label which states that a product complies with the specifications of the Eurasian Economic Union regarding to technical specification, labelling and documentation.

EAC Ex indicated conformity with the standard **TR CU 012/2011** ¹⁾ "On safety of equipment intended for use in explosive atmospheres". This contains technical specifications which are largely based on the IEC Ex as well as standards which are used in the EU.

Certified NORD products

The conformity certification is completed in the form of a declaration and certification. NORD products, their production and quality management have been accepted and approved by the certifying body NANIO CCVE. The corresponding certificates can be found under www.nord.com Documentation / Certificates.

¹⁾ TR CU means "The technical regulation of the customs union"" in Cyrillic script "TP C"

Scope of Application

Russia, Belarus, Armenia, Kazakhstan and Kyrgyzstan

Basis

TR CU 012/2011 "On safety of equipment intended for use in explosive atmospheres". Technical standards based on IEC (International Electrotechnical Commission) standards. In particular IEC 60079 and IEC 80079.

Products from NORD DRIVESYSTEMS compliant with EAC Ex are tested and produced in a similar manner to products according to Directive 2014/34/EU ATEX.

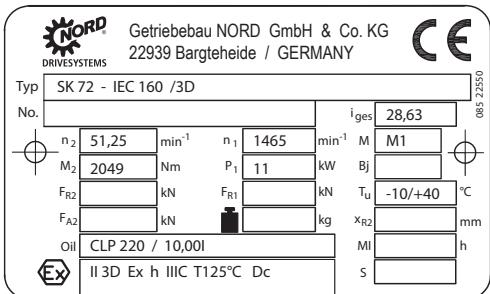

The technical data of the motors correspond to that of ATEX motors used in Europe - see page C1-2 and C5 as well as E1-2.

Standards for NORD EX motors

Applied standards for NORD EX motors

ГОСТ Standard	IEC Standard
ГОСТ 31610.0-2014	IEC 60079-0:2011
ГОСТ Р МЭК 60079-31-2013	IEC 60079-31:2013
ГОСТ Р МЭК 60079-7-2012	IEC 60079-7:2006
ГОСТ 31610.15-2014	IEC 60079-15:2010

This results in comprehensive product labelling which is illustrated with the following example for a drive which is to be operated in a dust Ex atmosphere corresponding to Zone 22.

II 3D Ex tc IIIB T125°C Dc X

Packaging

Energy efficient motors

From the point of view of the EAC Ex there are neither requirements nor restrictions with regard to energy efficiency classes. NORD supplies motors with efficiency classes IE1 and IE2 with EAC Ex approval.

Energy efficiency requirements for motors:

Specific national specifications

Canada CEC

- With the 2015 version of the Canadian Electrical Code (CEC) the IEC concept based on zones was adopted: ⇒ A5, IEC Ex
 - Repairs and extensions of existing systems may continue to be carried out in accordance with the requirements of the division system. ⇒ A8, HazLoc
 - Article 18-000, Annex J (see also NEC 500)

CEC in Canada – with CEC 2015 several articles have been completely revised or deleted entirely!

Article	Contents
18-000	Description of scope of application
18-002	Definition of hazard areas
18-004	Classification of gases and dusts
18-006	Classification of gases – Zone 0, 1 and 2
18-008	Classification of dusts – Zone 20, 21 and 22
18 -Annex J	Classification according to the division system for existing plants

The zone system according to IEC Ex protection is mandatory for all new installations as of 2015!

Hazloc - Explosion protection in North America

Unlike in many other parts of the world, the explosion protection in the US is not based on IEC specifications.

With a similarly high safety level, this results in specific technical solutions as well as a separate categorisation of technical devices with regard to the corresponding explosive environment and the explosive mixture.

The specifications for electrical equipment originate from the NEC The National Electrical Code (NEC) is a safety standard of the United States of America.

This formulates the specifications for the design of electrical installations.

**Safety standard
NEC**

HazLoc

Scope of Application

Basis

USA (and Canada for existing plants)

USA: NEC National Electrical Code

(Canada: CEC Canadian Electrical Code)

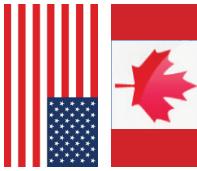

In 1996, the IEC classification system (categorisation according to zones) was also introduced for Class I. This change was made by Article 505 of the NEC, which gives the user the opportunity to choose the system that is technically and economically optimal for their purposes.

In 2005 Zones 20, 21 and 22 for areas with flammable dust (Article 506) were introduced.

**NEC
National Electrical Code**

NEC in the USA

Article	Contents
500	General requirements for Class I, II and III Divisions
501	Requirements for Class I Divisions
502	Requirements for Class II Divisions
503	Requirements for Class III Divisions
504	Requirements for Class I, II and III Divisions with regard to intrinsic safety (IS)
505	General and specific requirements for Zone 0, 1 and 2
506	General and specific requirements for Zone 20, 21 and 22

Class I

Introduction

Class I - Gas groups A, B, C and D

- Gases, vapours or aerosols
- NEC 500 / (CEC 18-000J for Canada up to 2015)
- Division 1
 - Areas in which hazardous concentrations of flammable gases or vapours
 - Can be present under normal operating conditions,
 - Can frequently occur during repair and maintenance work,
 - Can occur throughout malfunctions concerning operation. During which, errors occurring in electrical equipment may result in a source of ignition.
- Division 2
 - Areas in which hazardous concentration of flammable gases or vapours are kept in closed containers or systems and can only be released under fault conditions.

Class II - Dust groups E, F and G

Class II

- Dusts
- NEC 500 / (CEC 18-000J for Canada up to 2015)
- Division 1
 - Areas in which hazardous concentration of explosive dust atmospheres
 - Can be present under normal operating conditions,
 - Can occur throughout malfunctions concerning operation. During which, errors occurring in electrical equipment may result in a source of ignition.
 - Areas with hazardous quantities of conductive dust (Group E).
- Division 2
 - Areas in which hazardous concentrations of explosive dust atmospheres can only be released under fault conditions.

Class III

Class III

- Ignitable fibers and flyings
- NEC 500 / (CEC 18-000J for Canada up to 2015)
- Division 1
 - Areas in which flammable fibres and lint are caused or are processed.
- Division 2
 - Areas in which flammable fibres are stored or handled in a different manner to that in the production process.

Specific national specifications

Comparison of IEC and US explosion protection

Zone 20	Zone 21	Zone 22
is an area in which hazardous explosive atmospheres in the form of a cloud of flammable dust is present in the air constantly, for long periods or frequently.	is an area where it is likely that an explosive atmosphere in the form of a cloud of flammable dust will occasionally occur during normal operation.	is an area where it is likely that an explosive atmosphere in the form of a cloud of flammable dust only occurs in the air for a short period during normal operation.
Division 1	Division 2	
is an area in which hazardous concentrations of explosive dust atmospheres - Can be present under normal operating conditions, - Can occur throughout malfunctions concerning operation. During which, errors occurring in electrical equipment may result in a source of ignition.	is an area in which hazardous concentration of explosive dust atmospheres can only be released under fault conditions.	

Zone 0	Zone 1	Zone 2
is an area in which the hazardous explosive atmosphere consisting of a mixture of air and flammable gases, vapours or aerosols is present constantly, over long periods or frequently.	is an area in which during normal operation a hazardous atmosphere consisting of an explosive mixture of air and flammable gases, vapours or aerosols can form occasionally.	is an area in which during normal operation a hazardous atmosphere consisting of a mixture of air, flammable gases, vapours or aerosols cannot normally occur, or only occur for short periods.
Division 1	Division 2	
is an area in which flammable concentrations or flammable gases aerosols or liquids - Probably occur during normal operating conditions - Regularly occur as a result of maintenance or repair work or due to frequent faults.	is an area in which flammable concentrations of flammable gases, aerosols or liquids - Probably do not occur during normal operating conditions - Normally occur in closed containers and which can only be released in case of accidents, faults or abnormal operation.	

In spite of the same wording, the US temperature classes differ from those which are used in the IEC:

Note

Gas temperature category		
Max. surface temperature	IEC / NEC 505	NEC 500
450°C	T1	T1
300°C		T2
280°C		T2A
260°C		T2B
230°C		T2C
215°C		T2D
200°C		T3
180°C		T3A
165°C		T3B
160°C		T3C
135°C	T4	T4
120°C		T4A
100°C	T5	T5
85°C	T6	T6

For motors, the following specifications apply with regard to energy efficiency classes:

- USA Regulation: Epact 2007 EISA (NEMA MG-1)
- Canada Regulation: CSA C390 (NEMA MG-1)

- Official body involved:
 - UL and CSA

Energy efficient motors

Documents

Notes

Basic information regarding European dust explosion protection

General

Explosive dust atmospheres occur in various areas of industry and crafts. They are usually caused by mixtures of oxygen in combination with circulating or deposited amounts of ignitable dust. Electrical and mechanical equipment for use in explosion hazard areas is subject to special national and international standards and directives.

Explosion protection prescribes rules which have the objective of protecting people and objects from possible explosion hazards.

Integrated explosion protection specifies that the measures for explosion protection must be carried out in a defined sequence:

- Rules of conduct to prevent the occurrence of explosive atmospheres
- Avoiding ignition of explosive atmospheres
- Limiting the effect of an explosion to a safe level

In the design of mechanical and electrical equipment the objective is to prevent ignition or to restrict its effects. For this, the explosion protection regulations come into effect

The term ATEX, which is often used for explosion protection comes from the initial letters of an older French directive "Atmosphères Explosives". Current European explosion protection regulations are based on Directive 2014/34/EU as the successor of the previously valid EU Directive 94/9/EC. This Directive serves for the harmonisation of statutory regulations of member states for devices and protective systems for proper use in explosion hazard areas. This Directive is also known as the "Manufacturer Directive" in order to differentiate it from Directive 1999/92 EC which provides information regarding health and safety requirements for workers as well as details of categorisation according to zones.

Harmonised standards are used to meet basic safety and health requirements, some of which are exemplified below

Standards for electrical devices:

- DIN EN 60 079 - 0 General Regulations
- DIN EN 60 079 - 31 Dust explosion protection with housing "t"

EU Directive

Standards for mechanical devices:

- DIN EN ISO 80079-36:2016 Basics and requirements
- DIN EN ISO 80079-37:2016 Protection by constructional Safety

Standards

- for electrical devices

- for mechanical devices

Device groups

Directive 2014/34 EU differentiates between two groups of devices:

- **Group I** devices - indicate equipment which is particularly suitable for mining with device categories M1 and M2
- **Group II** devices - are suitable for use in other areas which may be endangered by an explosive atmosphere

Device groups

For most applications the Ex protection data on the gear unit type plate begins with II, so that the special features of Group I systems are not considered further here.

„ATEX“ Dust explosion protection

Standards - for motors

While Directive 2014/34 EU differentiates between two groups of devices I and II, it is further sorted into Groups I, II and III on the basis of DIN EN 60079-0 and -31 standards applicable to motors.

- **Group II** - indicates devices for mining
- **Group II .** - indicates devices for gas explosion protection
- **Group III.** - indicates devices for dust explosion protection

Zone

Zone

The categorisation into zones is dependent on specific conditions of the workplace – please refer to the stipulations in Directive 1999/92/EC with regard to the frequency of occurrence of dust.

- Zone 21

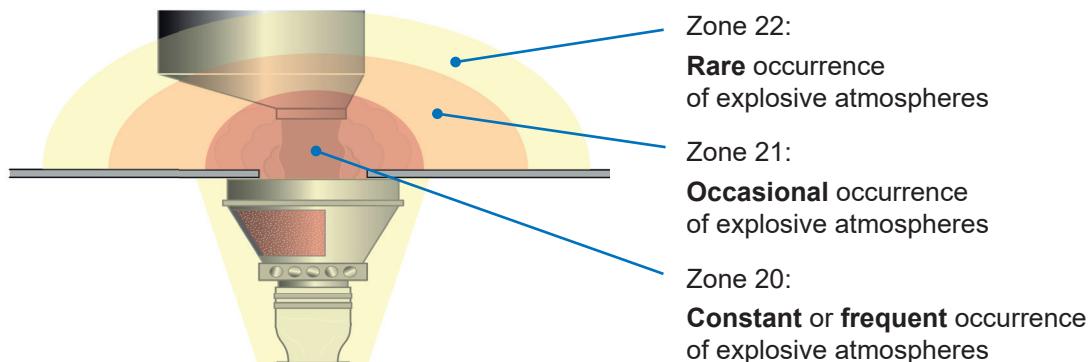

Zone 21:

The area in which an explosive atmosphere consisting of a mixture of air and inflammable dust can occasionally form during normal operation.

- Zone 22

Zone 22:

The area in which, during normal operation, an explosive atmosphere in the form of a cloud of combustible dust in the air normally does not occur, and if so, only rarely or for a short time.

gear units

A gear unit ordinarily becomes an explosion-protected system due to a constructionally safe design, use of specific Ex special parts as well as extensive documentation. For technical requirements of components, please refer to the highly informative DIN EN ISO 80079-37:2016.

Temperature details, e.g.: "125°C"

The Ex protection details on the type plate of Dust Ex drive units provide information about the maximum surface temperature of the device in degrees Celsius.

This is the total of the ambient temperature, the heating as a result of operation as well as safety reserves.

Standard limit value 125°C [140°C]

For most dust-air mixtures in the industry, this temperature is sufficient and practicable. In spite of this, an individual examination must be made for each individual application.

Drive dimensioning

The applications of our customers place a wide variety of demands on ATEX compliant operation. We are happy to consider these requirements in the drive design and thus contribute to the safe and reliable operation of systems and machinery. Documentation of special requirements is made on the type plate of the gear unit ⇒ Section "Explosion Protected Gear Units in General" or in the special documentation enclosed with the standard documentation.

Notes

Motors for dust explosion protection according to Directive 2014/34/EU

The motors listed in the following are explosion protected motors from our own production, which can be fitted NORD gear units either directly or by means of an IEC or NEMA cylinder.

There are two versions which are suitable for mains or inverter operation, which are available as follows:

- Version 2D for Zone 21
- Version 3D for Zone 22 non-conducting dust

The maximum surface temperature is normally 125°C, but may also be 140°C in specially marked exceptions.

ATEX IE2 2D

ATEX IE2 3D

The motors, which comply with the European Directive 2014/34 EU, can be operated in the corresponding design with inverters with frequencies between 3 and 100 Hz. The 50, 87 and 100 Hz characteristic curves can be used. 2D motors for Zone 21 for operation with inverters are always designed for 230/400V in order to enable maximum flexibility.

General

When planning, it must be noted that the continuously usable motor torque is governed by two factors:

- By limits which are specific to the motor. These values can be obtained from B1091-1
- By limits which are specific to the frequency inverter. These values can be obtained from G4014-1

The lower of the two continuously usable motor torques as determined above must always be used for planning purposes.

Category 2D and 3D standard motors supplied by NORD DRIVESYSTEMS comply with the standards DIN EN 60079-0 and DIN EN 60079-31.

The insulation of the windings is designed for operation with frequency inverters. For operation with frequency inverters, the motors are always equipped with triple thermistors as per DIN 44082.

For variable speed drives, the thermistor is the most important protective element to ensure compliance with the maximum surface temperature, which is stated on the type plate of the motor.

Planning of motors with control cabinet inverters from NORD DRIVESYSTEMS, or with inverters which fulfil the following criteria:

Necessary frequency inverter characteristics:

- Only frequency inverters with a vector regulation method which provides load-dependent terminal voltage adjustment in the low speed range may be used.
- The maximum output voltage of the frequency inverter must not be less than 91 % of the mains voltage which is stated as the rated voltage on the type plate.
- The frequency inverter must provide i^2*t monitoring which is adjustable to the rated current for the motor.
- The pulse frequency of the output stage must be adjustable to 4 kHz or higher.
- If the inverter does not have an input for evaluation of the thermistor, evaluation must be carried out by a separate triggering device which switches off the inverter. Operation without evaluation of the thermistor is not permitted.
- Evaluation of the thermistor for motors with ignition protection type tb (Category 2D) must be carried out with an external certified thermistor triggering device with an EU type test certificate.

Thermistor evaluation by the frequency inverter is not permitted. In case of a fault (excessive temperature) the motor and frequency inverter combination must be safely switched off via the external thermistor triggering device.

Dust Explosion protection „ATEX“

NORD®
DRIVESYSTEMS

Increased ambient temperatures for 3D motors

Operation is possible up to an ambient temperature of 60°C. The stated torques must then be reduced to 72 %. Linear interpolation between adjacent frequencies is permissible.

Dust explosion
protection

Continuously usable torques for operation with control cabinet inverters e.g. SK 500E

Torques with use of the 50 Hz characteristic curve for 2D and 3D motors without external fan

Motors for dust explosion protection according to IEC Ex

The motors listed in the following are explosion protected motors from our own production, which can be fitted NORD gear units either directly or by means of an IEC cylinder. They are only suitable for mains operation.

The motors have two versions which are exclusively suitable for mains operation and are available as follows:

- Version IDB IP66 conducting and non-conducting dust
 - Version IDC IP55 non-conducting dust

The maximum surface temperature is normally 125°C, but this may be 140°C in specially labelled exceptional cases.

Technically, these motors are similar to NORD Ex motors for dust application such as those on  Page C1 with acceptance according to Directive 2014/34 EU. However, they have a smaller number of options and are also not suitable for inverter operation.

IEC Ex tb IIIC T* °C Db** (conducting and non-conducting dust)

IEC Ex tc IIIB T* °C Dc** (non-conducting dust)

DRIVESYSTEMS

Motors for the North American market

Class II, Division 2 Group, Groups F and G temperature code 165°C, operating mode S1, IP 55, IP 66, -20°C to +40°C

These are motors which are used in areas in which flammable mixtures of dust and oxygen do not occur under normal conditions, but in exceptional cases can not be ruled out.

These motors are available in efficiency classes High "IE2" and Premium "IE3". The motor data is listed for the voltages 230 / 460 V and 332 / 575 V which are especially important for the USA and Canada.

Mains operation

All motors are suitable for mains operation.

Basic information regarding European gas explosion protection

General

Explosive gas atmospheres occur in various areas of industry and crafts. They are usually caused by mixtures of oxygen in combination with explosive gases. Electrical and mechanical equipment for use in explosion hazard areas are subject to special national and international standards and guidelines.

Explosion protection prescribes rules which have the objective of protecting people and objects from possible explosion hazards.

Integrated explosion protection specifies that the measures for explosion protection must be carried out in a defined sequence:

- Rules of conduct to prevent the occurrence of explosive atmospheres
- Avoidance of ignition of explosive atmospheres
- Limiting the effect of an explosion to a manageable level

In the design of mechanical and electrical equipment the objective is to prevent ignition or to restrict its effects. For this, the explosion protection regulations come into effect.

The term ATEX, which is often used for explosion protection comes from the initial letters of an older French directive "Atmosphères Explosives".

Current European explosion protection regulations are based on Directive 2014/34/EU as the successor of the previously valid EU Directive 94/9/EC. This Directive serves for the harmonisation of statutory regulations of member states for devices and protective systems for proper use in explosion hazard areas.

EU Directive

This Directive is also referred to as the "Manufacturer's Directive" to distinguish it from the "1999/92 EC" directive, which also provides information on improvements to employee health and safety requirements in categories and zones.

Harmonised standards apply in order to meet basic safety and health requirements, some of which are exemplified below:

Standards

Standards for electrical devices:

- for electrical devices

- DIN EN 60079 - 0 General Regulations
- DIN EN 60079 - 1 Pressure-resistant Encapsulation "d"
- DIN EN 60079 - 7 Increased Safety "eb, ec"
- DIN EN 60079 - 15 Non Sparking "n"

Standards for mechanical devices:

- for mechanical devices

- DIN EN ISO 80079-36:2016 Basics and requirements
- DIN EN ISO 80079-37:2016 Protection by Constructional Safety

Equipment group

Device groups

Directive 2014/34 EU differentiates between two groups of devices:

- **Group I** devices - indicate equipment which is especially suitable for mining with device categories M1 and M2
- **Group II** devices - are suitable for use in other areas which may be endangered by an explosive atmosphere

For the majority of applications, the explosion protection data on the type plate begins with "II", therefore the special features of Group I systems will not be described in further detail here.

Gas Explosion Protection „ATEX“

Standards - for motors

While Directive 2014/34 EU distinguishes between two categories of devices I and II, it is differentiated into Groups I, II and III based on EN 60079-0 standards for motors.

- **Group I** - features devices mining
- **Group II** .- features devices for gas explosion protection
- **Group III.** .- features devices for dust explosion protection

Zone

Zone

The categorisation into zones is made according to the conditions of the workplace – please refer to the statements in Directive 1999/92/EC with regard to the frequency of occurrence of the gas.

- Zone 0

Zone 0:

The area in which an explosive atmosphere consisting of a mixture of air and inflammable gases, vapours or aerosols is present permanently, for long periods, or frequently.

- Zone 1

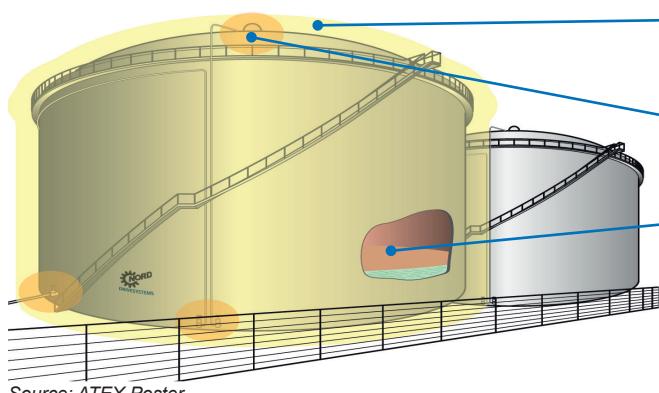

Zone 1:

The area in which an explosive atmosphere consisting of air and inflammable gases, vapours or aerosols can occasionally form during normal operation.

- Zone 2

Zone 2:

The area in which an explosive atmosphere of air and combustible gases, vapours or aerosols normally does not occur, or only occurs for a short time during normal operation.

Temperature classes

Flammable atmospheres are divided into temperature classes, which provide information of how high the temperatures of surfaces may be that can come into contact with these gases.

T1 - T6

For motors, this typically applies to externally accessible housing and shafts as well as for surfaces inside the motor and the terminal box.

The temperature classes are divided into T1-T6, whereby in practice the temperature classes T3 and T4 deserve special attention because they are particularly often implemented by motors.

This means:

The higher the temperature class, the lower the maximum permissible surface temperature.

For example, motors of temperature class T4 have temperatures of up to 135 °C as a result of heating during operation, whereas motors in class T3 do not exceed 200 °C.

Type of ignition protection

Depending on the device category and type of risk, small letters in the explosion protection data identify the precise ignition protection type for a device. Encapsulations and constructional measures mainly come into question as methods of protection.

Different solutions are permissible and possible according to the hazard zone.

Gear units

As a rule, a gear unit becomes an Ex-protected system through a safe design, the use of Ex-specific special parts and detailed documentation.

The very informative EN 80079-37 indicates which requirements the technical components must meet.

Motors with pressure-resistant encapsulation "d" or pressure-resistant encapsulation with terminal boxes with Increased Safety "de"

The idea for protection with "Pressurised encapsulation - Ex d" consists of housing potential source of ignition in a pressure-resistant casing. The sealing surfaces are bounded by gaps which are resistant to ignition penetration. This safely prevents any explosion inside the housing from spreading to the environment.

For ignition protection class "Ex de" a terminal box with ignition protection type "Ex e" is used. The motor itself has ignition protection type "Ex d".

Pressurised encapsulation motors are assigned to Device Category 2G (Zone 1) and also meet the requirements for Device Category 3G (Zone 2). The rated power does not differ from that of the standard motor.

These motors are often used in cases where inverter operation, brakes, encoders and/or a very high level of safety are required. Typically, pressure resistant encapsulated motors supplied by NORD DRIVESYSTEMS fulfil the requirements for Explosion Group IIC and Temperature Class T4.

Motors versions Increased Safety, type "eb"

For motors of device categories 2G and 3G, i.e. Ex-Zones 1 and 2, sparking and impermissible temperatures are prevented as per ignition protection type "e" (Increased Safety). This is achieved by the design of the fans and fan cowls, bearings and terminal boxes.

Characteristic for this is e.g. the low surface resistance of plastic fans (depending on the circumferential speed of the fan). There are large air gaps between the rotating parts and large air gaps and leakage tracks in terminal boxes.

For the selection of the model it should be noted that drives units with igniton protection type "e" often have a reduced output power when compared to the corresponding standard motor.

These motors have different windings and have a larger air gap between the rotor and the stator in comparison with motors for non-explosive areas. This results in a genuine reduction in power. Ex e motors from NORD DRIVESYSTEMS comply with energy efficiency class IE2. "Ex e" motors are usually used up to Temperature Class T3.

Areas of application

Notes

Exeb Motors Successor of the Exe Motors

Exec Motors Successor of the Exn Motors „Non Sparking“

NORD supplies modern Exeb and Exec motors from its own production, which comply with energy efficiency class IE2.

In many cases, due to their high efficiency and modern design, the commonly used reduction of the rated power is not necessary. These motors have type test certification from the PTB (Physikalisch-Technische Bundesanstalt).

PTB Certificates

NORD DRIVESYSTEMS explosion protected motors have the following type codes:

Type code

Size: 63 – 200

Power code: S, M, L, A, X

Efficiency class H = High (IE2)

Number of poles

ATEX category 2G, 3G

Options

80 L H /4 2G

...

Gas explosion
protection

The Exe and Exn motors listed comply with temperature classes T1, T2 and T2.

Temperature classes

These motors may not be operated with frequency inverters.

Notice

Not permitted for use with
frequency inverters

Use of a suitable soft starter is permissible. The permissible ambient temperature or cooling air temperature for NORD Exe and Exn motors is between -20°C and +40°C.

These motors have the following features:

Features

- Housing material: Aluminium
- Protection class: IP55
- Insulation class: F
- Fan cowl material: Metal
- Fan material: Plastic;
above Size 132 metal
- Type plate material: Stainless steel (V2A)
- Cable gland: 63, 71: 1 x M25x1.25 II brass
80, 90: 1 x M25x1.5 II brass
100, 112: 1 x M32x1.5 II brass
132: 1 x M32x1.5 II brass
160, 180: 1 x M40x1.5 II brass
- Blind plugs: 63, 71: 3 x M25x1.25 & 2 x M12x1.5 II brass
80, 90: 3 x M25x1.5 & 2 x M12x1.5 II brass

Notice!

If the time t_A is not indicated on the type plate, the thermistor is not permissible as the sole means of protection.

It is essential that the motor is protected with a motor protection relay which has been approved by a testing facility.

The motor protection relay must be approved for the ignition protection class which is stated on the motor.

Thermistor permissible as the sole protection

Notice
- if t_A is not stated
on the type plate

Gas Explosion protection „ATEX“

Options

NORD DRIVESYSTEMS high efficiency explosion protected motors are available with the following options:

Motor Option	Designation
KB	Condensation hole (closed)
RD	Protective shield
TF	Thermistor (Standard)
WE	Second shaft end
IP66	Protection class IP66
SOSP	Special voltages between 104 - 725 V
60Hz	Motor for 60 Hz mains operation

Documentation

The correct operating and installation instructions B1091 are included in every delivery and can be viewed in advance at www.nord.com.

They are available in the following languages:

- Available languages

German, English, French, Spanish, Italian, Serbian, Chinese, Arabic, Brazilian/Portuguese, Dutch, Bulgarian, Slovenian, Danish, Greek, Lithuanian, Turkish, Latvian, Romanian, Polish, Russian, Slovakian, Czech, Finnish, Swedish, Hungarian, Croatian and Norwegian.

- Siemens range

Exe and Exn motor, which are not stated in the above ranges, are taken from the Siemens product range. This is typical for powers > 17.5 kW, other pole numbers or motor speeds, as well as for Exn motors for inverter operation.

Exd and Exde motors

No other explosion protected motors are offered on the market in a greater variety than pressure resistant encapsulated motors.

To make the advantages of this variety accessible to our customers, NORD DRIVESYSTEMS cooperates closely with various manufacturers. This enables us to provide our customers with an attractively priced and technically engaging drive, which realises the customer demand in the best possible way.

The standard version of these motors is as follows:

- II 2G T4 de IIC T4 Gb as 4-pole version - suitable for mains and inverter operation.

The majority overview of motors does not indicate individual motor features in this catalogue. The following overview presents the range of product and draws attention to special features.

- Power range: 0.12 - 200 kW (in combination with industrial gear units up to 1000 kW)
- Number of poles: 2,4,6 and 8 pole as well as switchable poles for 4-2, 6-4, 8-4 and 8-6 pole
- Cast iron motors in the entire power range and die cast aluminium motors up to 4 kW are possible
- Energy efficiency class IE1 as standard. IE2 and IE3 are possible at extra charge

Motor mounting on the gear unit is typically by means of IEC cylinders in use with IEC B5 standard motors for fast delivery.

In many cases, the motor can also be mounted directly on the gear unit. This has advantages in thermally critical cases or to achieve high output speeds and larger adjustment ranges with inverter operation. This version also has advantages for confined installation spaces.

Pressure resistant encapsulated motors are suitable for gas and dust applications in combination with very low ambient temperatures of < -20°C to -40°C.

High ambient temperatures of >40°C < 60°C are also possible. In some cases, this results in a reduction in motor power and / or ISO H insulation.

Further motor options which can be supplied on request:

- Efficiency class IE2 or IE3
- Exd version with pressure resistant terminal box encapsulation
- Protective or rain cover "RD"
- Foot-mounted version
- Temperature sensor for shut down in case of excess temperature "TF"
- Additional temperature sensors which switch at lower temperatures and are used as a warning. "2TF"
- PT100 for direct measurement of the winding temperature "PT100"
- ISO H
- Tropicalised installation
- External fan
- Special voltage "SOSP"
- IP66
- Standstill heating to prevent condensation "SH"
- Additional explosion protection for Zone 21 or Zone 22 "2D" / "3D"
- Brakes (various versions for combination with other options) as holding or working brakes "BRE"
- Incremental encoder "IG"
- Second shaft end, optionally with hand wheel "WE"
- Insulated bearings for inverter operation for motor sizes above Size 160

These special motors are marked accordingly with temperature specifications and are equipped with powerful standstill heaters.

Standard version

Motor mounting - IEC cylinder

Direct motor mounting - Advantages

Pressure resistant encapsulated motors <-20°C to -40°C

>40°C < 60°C

Options on request

Gas Explosion protection „HazLoc“

Motors for the North American market

- Class I
- Division 2 Groups A, B, C, D
- Temperature Code 165°C
- Operating mode S1
- IP 55, IP 66,
- -20°C to +40°C

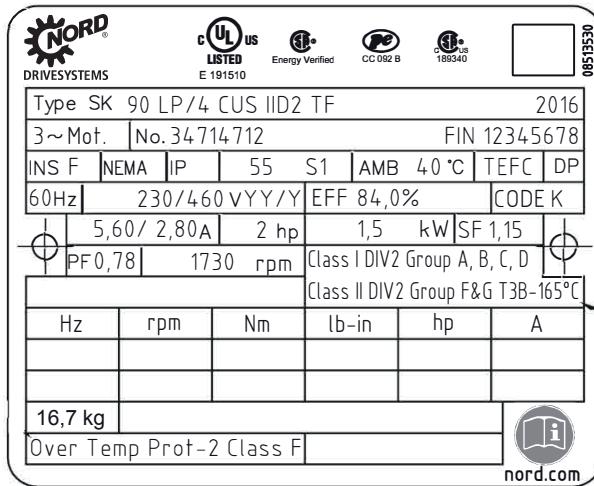

These are motors which are used in areas in which flammable mixtures of gases or vapours do not occur under normal conditions, but in exceptional cases cannot be ruled out.

These motors are available in efficiency classes High "IE2" and Premium "IE3". The motor data is listed for the voltages 230 / 460 V and 332 / 575 V which are particularly important for the USA and Canada ⇒ See type plate.

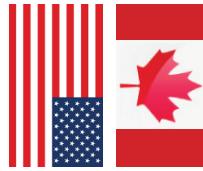

NORD DRIVESYSTEMS motors are suitable for mains operation. Inverter operation is in preparation.

Options

- Special voltages between 200 and 600 V
- Temperature sensor "TF"
- Temperature monitor "TW" bi-metal switch
- Protective cover "RD"
- Double fan cowl "RDD"
- Second shaft end "WE"

In addition to NORD's listed motors for the North American market, various motors from suppliers can be offered in addition.
Please contact us.

Notes

Unlike in much of the world, European strict requirements apply to non-electrical equipment such as e.g. Pumps or gearboxes to be used in potentially explosive atmospheres.

General

The basic requirements for these are defined in Directive 94/9/EC and its successor 2014/34/EU. To facilitate the demonstration that a device meets these requirements, uniform standards have been adopted at the European level, such as DIN EN ISO 80079-36:2016 and DIN EN ISO 80079-37:2016 were created, which apply in particular to the non-electrical area of explosion protection. These standards influence the conception, construction, testing, labelling and documentation of the devices and equipment. Compliance with these standards ensures that a product can be expected to comply with the essential conditions needed for the Declaration of Conformity.

The level of safety in each Member State is determined by these mandatory regulations for equipment and protective devices intended for use in explosion hazard areas. This facilitates free trade within the EU.

The safe operation of gearboxes and gearmotors depends on the standards-compliant design and two other aspects. Firstly, selection of a gearbox corresponding to the application, taking into account all the factors acting on the gearbox, and secondly proper assembly, operation and maintenance of a drive.

Selection of the gear unit should be made according to the technical explanations in the relevant product catalogues G1000, G1012, G1035 and G2000.

The gear unit selections described there must be complied with in order to avoid overloading the gear unit. This must be performed particularly conscientiously.

The selection of a suitable gear unit for the application, especially the necessary operating factor f_B for drive units to be operated in explosion hazard areas also has an influence on safety.

Special technical features of gear units

- Pressure venting to reduce the pressure inside the gear unit and to protect against dirt
- In case of a calculated oil temperature $> 84^\circ\text{C}$, automatic use of synthetic oil and Viton shaft sealing rings
- The strength of the housings, shafts and gears correspond to or exceed the minimum values required by the standards
- In some cases a special housing material may be required. This depends on the method of attachment and the weight of the motor
- In some cases, special coupling materials (electrically conducting)
- Largely closed covers for shrink disk versions
- Possibility of checking the oil level, even for small gear units

„ATEX“ Explosion protected gear units

NORD®
DRIVESYSTEMS

Available gear unit types

Helical gear units (Catalogue G1000)

- ✓ Foot or flange mounted
- ✓ UNICASE housing

Sizes	11
kW	0.12 – 160
Nm	10 – 26,000
i	1.35:1 – 14,340.31:1

Parallel shaft gear units (Catalogue G1000)

- ✓ Push-on, foot or flange mounted versions
- ✓ Hollow or solid shaft
- ✓ Compact design
- ✓ UNICASE housing

Sizes	15
kW	0.12 – 200
Nm	65 – 90,000
i	4.03:1 – 6,616.79:1

Helical worm gear units (Catalogue G1000)

- ✓ Push-on, foot or flange mounted versions
- ✓ Hollow or solid shaft
- ✓ UNICASE housing

Sizes	6
kW	0.12 – 15
Nm	46 – 3,090
i	4.40:1 – 7,095.12:1

NORDBLOC.1 helical gear units (Catalogue G1000, G1012)

- ✓ Foot or flange mounted
- ✓ Die-cast aluminium housing (5 sizes)
- ✓ UNICASE housing
- ✓ Dimensions according to industrial standards

Sizes	13
kW	0.12 – 37
Nm	55 – 3,300
i	2.10:1 – 456.77:1

2-stage bevel gear units (Catalogue G1000, G1014)

- ✓ Up to 97% efficiency
- ✓ Push-on, foot or flange mounted versions
- ✓ Hollow or solid shaft
- ✓ UNICASE housing
- ✓ Die-cast aluminium housing

Sizes	5
kW	0.12 – 9.2
Nm	90 – 660
i	3.55:1 – 70:1

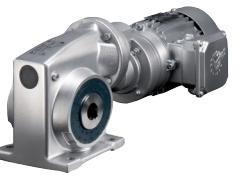

3-stage bevel gear units (Catalogue G1000)

- ✓ Up to 95% efficiency
- ✓ Push-on, foot or flange mounted versions
- ✓ Hollow or solid shaft
- ✓ UNICASE housing

Sizes	11
kW	0.12 – 200
Nm	180 – 50,000
i	8.04:1 – 13,432.68:1

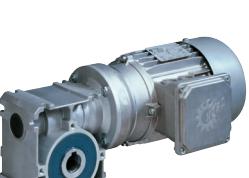

SMI worm gear units (Catalogue G1035)

- ✓ Smooth surface
- ✓ Lifetime oil filling

Sizes	4
kW	0.12 – 1.5
Nm	21 – 246
i	5.00:1 – 540.0:1

SI worm gear units (Catalogue G1035)

- ✓ Modular
- ✓ Universal fastening facilities
- ✓ IEC versions

Sizes	5
kW	0.12 – 4.0
Nm	21 – 427
i	5.00:1 – 3,000.00:1

„ATEX“ Explosion protected gear units

Details on the type plate

- Component strength

For the examination of a drive unit with regard to its suitability for use in explosion hazard areas, in particular the strength of the components as well as heating of the drive are examined individually with regard to the intended use. Many of these details are documented directly on the type plate.

In particular the following details have a direct influence on the strength of the components:

- Gear unit type, possible as the result of specification of the operating factor or the minimum bearing life
- Motor attachment directly or by means of an IEC or NEMA cylinder
- Output torque
- Gear ratio in combination with the motor torque
- Type and dimension of the output shaft
- Output shaft bearing type
- Forces and torques acting on the output shaft
- Braking torque

- Temperature calculation

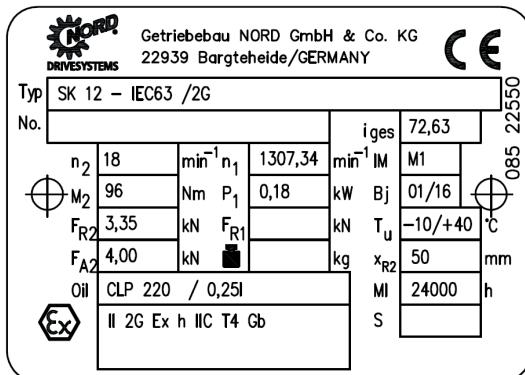

These details are especially important for calculation of the drive temperature

- Gear unit type
- Motor attachment directly or by means of an IEC or NEMA cylinder
- Presence of a free input shaft (i.e. without attached motor)
- Speed of rotation of all rotating components
- Installation orientation - this has a great influence on the oil filling
- Bearing type
- Oil type
- Rated capacity
- Ventilation of the motor, whose cooling air flow also has an influence on the gear unit
- Inverter operation
- Maximum ambient temperature / cooling air temperature
- Installation altitude
- Number and type of seals

Many of the customer's details are documented directly on the type plate.

Ex Gear unit type plate

Explanation of the type plate

Abbreviations	Unit	Designation	⇒ B2000 Section
Type	-	NORD gear unit type	
No.	-	Serial number	
iges	-	Overall gear unit ratio	
n2	rpm	Rated speed of gear unit output shaft*	
n1	rpm	Rated speed of the gear unit drive shaft or the drive motor*	
IM	-	Version (installation orientation)	6.1
M2	Nm	Max. permissible gear unit output shaft torque	
P1	kW	Max. permissible drive power or motor power	
Bj	-	Year of manufacture	
FR2	kN	Max. permissible transverse force on the gear unit output shaft	3.9
FR1	kN	Max. permissible transverse force on the gear unit drive shaft for option W	3.9
Tu	°C	Permissible ambient temperature for the gear unit	
FA2	kN	Max. permissible axial force on the gear unit output shaft	3.9
	kg	Total weight	3.8
MI	h	Interval for general overhaul of the gear unit in operating hours or according to the specification of the dimensionless maintenance class CM	5.2
xR2	mm	Max. dimension for the point of application of the transverse force FR2	3.9
Oil	-	Gear unit oil type (standard designation)	6.2
Last line 		ATEX labelling, as per (DIN EN 13463-1): 1. Group (always II, not for mines) 2. Category (2G, 3G for gas or 2D, 3D for dust) 3. Ignition protection type if fitted (c) 4. Explosion group if applicable (IIC, IIB) 5. Preventative maintenance

Scheduled and proper maintenance of gear units is especially important for explosion protection as it has a direct impact on safe operation. In particular, operators of Category 2 (2D or 2G) drives for use in Zone 1 or 21 must take expected errors into account.

This includes scheduled replacement of the gear oil as well as regular checks on the oil level – refer to the details in the operating and maintenance manual B2000.

In addition, the bearings and shaft sealing rings must be replaced as a preventative measure depending on the requirements of drive selection and application. Maintenance in case of damage or signs of imminent bearing damage results in a potentially dangerous situation and must be avoided at all costs!

To enable this preventative maintenance, according to a draft version of DIN EN ISO 80079-37:2016, NORD labels its Category 2 gear units with a maintenance interval "MI". This interval indicates the number of operating hours after which replacement of the bearings and seals is advisable. In association with this, other components of the gear unit are subjected to a visual inspection and are replaced in rare cases.

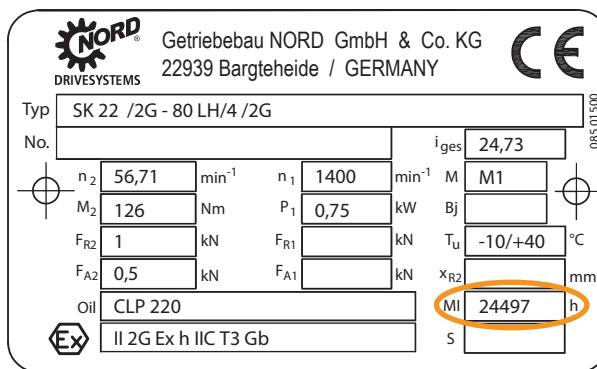

The maintenance interval assumes use of the gear unit with the rated power / rated torque. Lower powers have a positive effect on the maintenance interval.

Example for a gear unit with a maintenance interval of 24497 hours.

Oil level check

Maintenance interval

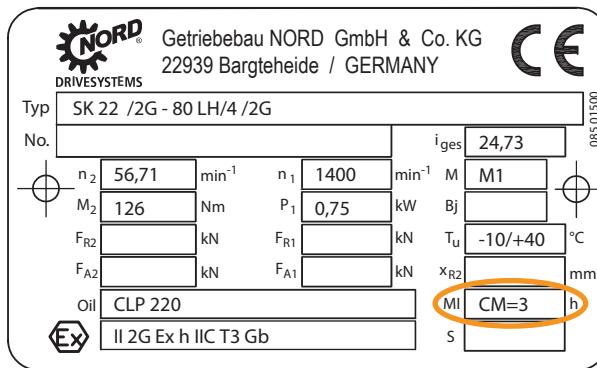

Examples

Explosion protected gear units

On customer's request, it is also possible to specify a maintenance class, which enables the customer to calculate the maintenance interval depending in the period of use per day and the actual average output power. Further details can be found in the operation and maintenance manual B2000.

Notes

Hybrid mixtures

Both the gear units and motors, which are used in the context of explosion protection, take into account the specific requirements of the respective explosive substance.

For example, gases may penetrate into cavities in the motor or terminal box, which must be taken into account during construction.

Dust, on the other hand, is prevented by IP55 or higher protection from accumulating in the motor in an ignitable concentration, which facilitates the motor design on this point and saves costs.

In contrast, in the case of motors in a dust environment, electrostatic charging may occur more easily, which may result in hazardous corona discharge. In summary, it can be said that the ignition hazards in dust and gas atmospheres differ and result in specific technical solutions.

In rare cases, e.g. in mining, a mixture of flammable dust and flammable gas may occur - so-called hybrid mixtures. In the case of mining, this would typically be a mixture of methane, coal dust and air.

In view of the large number of flammable gases, dust and their resulting mixtures, the potential hazards are extremely numerous and complex.

The selection of a suitable drive can therefore not be made without the precise analysis of the situation on site. It must be acknowledged that a drive which can be used safely in a pure gas or dust atmosphere cannot provide an adequate level of safety in an environment with a hybrid mixture. In this case, the operator or plant constructor has to endeavour to avoid danger in the context of tertiary explosion protection - ie to reduce the effect of a possible explosion.

Currently no standard exists which provides specifications for the technical design of motors or gear units in environments with hybrid mixtures. NORD DRIVESYSTEMS therefore does not offer motors or gear units for this purpose.

For logistical reasons it may be advisable to use a drive unit which can be used in either an explosive gas or dust atmosphere. Here it should be weighed whether the higher price of the drive is outweighed by the flexibility gained. Such drives are offered by NORD DRIVESYSTEMS in the following combinations: 2G/2D, 2G/3D and 3G/3D.

The type plates of the gear unit and the motor indicate suitability for both gas and dust.

Notes

Cooling systems

Compliance with the maximum permissible temperatures is of great importance in explosion protection. External application-related influences, a high power density in the gear unit, high speeds, as well as gear unit installation with maximum oil level in the gear unit may lead to gear units having to be cooled. For this purpose, NORD offers both water coolers as well as oil/air coolers for cooling gear units.

Water cooling

Gear unit option CC: Casing cover with cooling spiral

An integrated heat exchanger is optionally available for parallel shaft gear units and bevel gear units. The cooling water flows through the heat exchanger, and cools the gear unit. Monitoring of the temperature or the cooling water flow is recommended. As the cooling coil is not located in the oil space, the NORD water cooling design is very safe (German industrial design registration 20 2005 005 452.6).

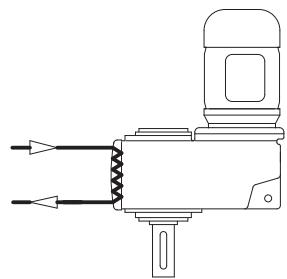

**Integrated heat
exchanger**

NORD water cooling

Water cooling is also suitable for use in areas with potentially explosive atmospheres (ATEX).

** In preparation - Supply on request

✓ Full cooling power

○ Reduced cooling power

Oil cooler

Gear unit option CS2

An oil/air cooler is a separate system which is connected to the gear unit with hoses which cools the oil in the gear unit and therefore directly reduces the surface temperature of the gear unit.

For this, the gear unit is drawn in by a pump and flows through a heat exchanger. The oil is cooled by an air stream which is generated by a fan. The oil is then returned to the housing from the heat exchanger. The temperature is controlled by a thermostat.

Temperature-monitoring

- EX-compliant PT100

Temperature monitoring is necessary and is enabled by an Ex-compliant PT100 which is supplied with the system. Depending on the ambient temperature, the cooling power is approx. 5 kW.

Can be used for the following gear units

- Helical gear units SK62 – SK103
- Parallel shaft gear units SK6282 – SK11382.1
- Bevel gear units SK9072.1 – SK9096.1

The cooling system is suitable for

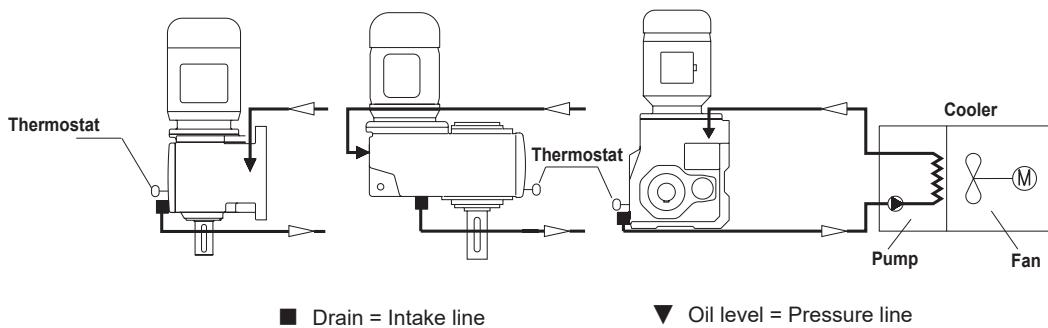

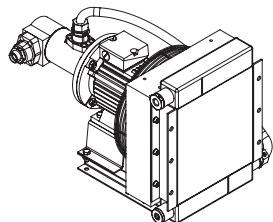

- II 2G Ex h IIB + H2 T4 GB
- II 3D Ex h IIIC T130°C Dc
- Ambient temperatures (hoses and cooler) in operation
 - Minimum +5°C with 2 m hose length
 - For $\geq +20^\circ\text{C}$ 2 or 4 m hoses can be used
- Max. ambient temperature +40°C
 - Higher temperatures on request

Planning of this cooling system is always carried out by experienced engineers, who modify the system to the special features of the application and the gear unit which is to be cooled.

Commissioning, maintenance

Separate special documentation exists, which provides detailed information about the commissioning, operation and maintenance of the system.

Oil cooler

Delivery

Oil cooler, gear unit with special type plate, hose pack, PT100

Decentralised Product Group

NORD DRIVESYSTEMS understands decentralised inverters and starters to be devices which are mounted on the motor or mounted in the vicinity of the drive with the aid of wall mounting kits. This means that the devices must provide the same level of explosion protection as the drives with which they are associated. A 1:1 connection is required for this.

It is not permissible for an inverter to operate two motors simultaneously. NORD DRIVESYSTEMS is the manufacturer of all inverters and starters sold by NORD and can take all of the necessary measures from development and production up to quality control to ensure that the combination and electrics are ideally matched.

NORD has the following decentralised product groups which may all be installed in Ex Zone 22.

Decentralised product groups

- **NORDAC Start motor starter SK 135E**

The motor starter NORDAC START is a decentralised wear-free electronic motor starter for soft starting of all kinds. It is equipped with a reversing function and internal motor protection and can therefore be flexibly integrated into any system.

- **NORDAC BASE – Frequency inverter SK 180E**

The NORDAC BASE is NORD's economical drive solution for the decentralised frequency inverter technology sector. With the NORDAC BASE, you purchase technology with a robust design that has been specially developed for simple drive solutions for installation outside the control cabinet at low cost.

- **NORDAC FLEX – Frequency inverter SK 200E**

Flexible to install, easy to service. The NORDAC FLEX is our most flexible inverter that can be tailored to any customer application by means of scalable functions. Installing and servicing the SK 200E can be carried out quickly and reliably due to its extensive plug-in capability and easy parameter transfer via EEPROM memory.

Device	Within ATEX-Zone 22	Outside of a zone
NORDAC START	0.25 ... 7.5 kW	0.25 ... 7.5 kW
NORDAC BASE	0.25 ... 2.2 kW	0.25 ... 2.2 kW
NORDAC FLEX	0.55 ... 7.5 kW	0.55 ... 22 kW

Extensions for devices which are used within the ATEX zone:

- Internal CU4 modules / internal braking resistors
- ATEX Potentiometer
- Wall mounting kit without fan

Protection class	IP55	IP66
Non-conducting dust II3D Ex tc IIIB T125°C Dc X		Yes
Conducting dust II3D Ex tc IIIC T125°C Dc X	-	Yes

Sealing of the devices is essential for safe and reliable operation. For this, special IP66 cable glands and exceptionally reliable housing seals are used. Conversions may only be made by NORD or by persons certified by NORD!

Notice

Decentralised frequency inverters for „ATEX“ dust explosion protection

To ensure smooth commissioning, documentation is available in the following languages:

Available languages

Documentation	EN	EN	FR	ES	P	RU	PL	CN	US	CZE	IT	NL

BU 0180 / 0185	X	X	X	X	Y	X	Y	X		Y	Y	Y
BU 0200 / 0240	X	X	X	X	Y	X	X	X	X		Y	Y

X ⇒ Main instruction

Y ⇒ Brief instruction

Usable characteristic curves

The frequency inverters can be operated with variously set characteristic curves. The settings for this are stated in B1096. The following are possible:

- 50 Hz characteristic curve (only for ASM asynchronous motors)
- 60 Hz characteristic curve (only for ASM asynchronous motors)
- 87 Hz characteristic curve (only for ASM asynchronous motors)
- 100 Hz characteristic curve (for ASM)

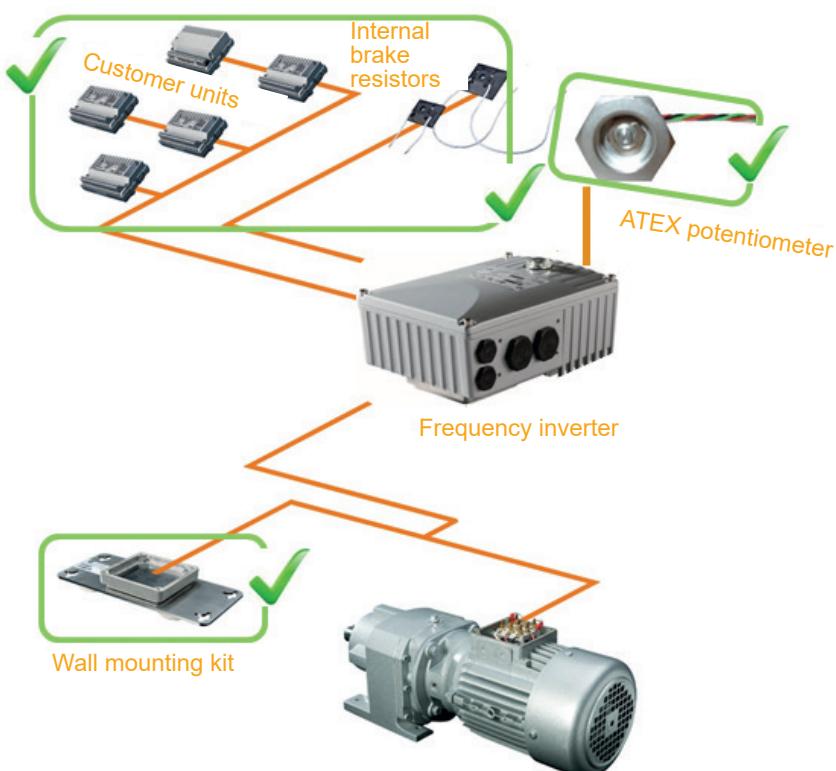

Settings

It is essential that the following settings are complied with for operation:

- Pulse frequency 4 – 6 kHz
- Vector regulation
- Setting of the I^2t trigger curve
- Maximum frequency 100 Hz
- Temperature sensor triggering must be used and tested

Options

The otherwise extensive range of options is reduced to just a few for starters and inverters which are operated in the Ex zone.

Frequency inverters and starters for installation outside of the Ex zone

For safe operation of motors within the Ex zone, motor manufacturers specify requirements for the technical design and settings of inverters and starters.

Details of these can be found in the relevant operating and maintenance instructions.

If the motors and inverters from the same manufacturer are used, it is very likely the devices will be in sync.

For explosion protection a 1:1 connection between the motor and the inverter is necessary. It is not permissible for an inverter to operate two motors simultaneously. NORD DRIVESYSTEMS is the manufacturer of all inverters and starters which are sold by NORD and can take all of the necessary measures from development and production up to quality control to ensure that the combination and electrics are ideally matched.

■ NORDAC LINK Motor starter SK155E

One product, many advantages. The NORDAC LINK motor starter impresses with its high plug-in capability and its easy installation. It can be freely configured and easily installed. Commissioning and servicing of the motor starter is performed easily with the integrated maintenance switch and the local manual control facility. It can also be integrated into various field bus systems. In short: The SK 155E is simply convenient.

■ NORDDAC LINK Frequency inverter SK250E

The NORDAC LINK is the convenient NORD drive solution for flexible decentralised installation. Depending on the application and the requirements, NORDAC LINK can be freely configured, which results in a large number of different potential applications for this inverter. The high level of plug-in capability enables fast and easy installation of the units. Commissioning and servicing of the system is performed quickly with the integrated maintenance switch and the local manual control facility. The NORDAC LINK can be integrated into all common bus systems.

■ NORDAC PRO Frequency inverter SK500E

The NORDAC PRO is the inverter for all drive applications. It offers a wide power range, and its functionality can be extended with plug-in option modules. For this inverter, variable cooling concepts are used to remove heat, which can enable the removal of heat outside of the control cabinet and can be simply adapted to the requirements of the application with various option modules.

Notes

A large area of light blue graph paper for writing notes.

NORD DRIVESYSTEMS provides extensive documentation. It ranges from the description of the product groups gearboxes, motors and inverters in catalogues, to the provision of drawings and data sheets, to operating and maintenance instructions.

This section is intended to provide a brief overview.

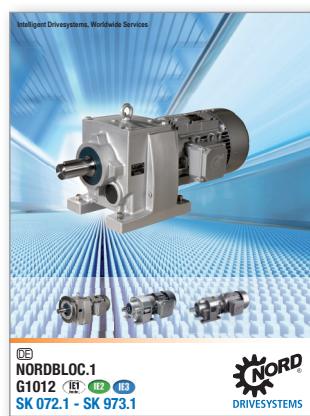

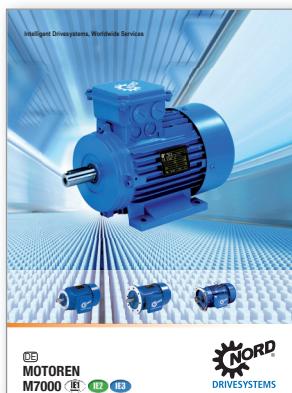

Catalogues

This Ex-catalogue is a supplement to motor and gear unit catalogues M7000, G1000, G2000, G1012 and G1035.

These can provide important information for the selection of the gear unit as well as descriptions of the various kinds and types of gear units and their options. Possible speeds and gear ratios as well as the associated output torques are shown.

Use of Ex motors may result in slightly changed data, which can be obtained from the offer in case of an enquiry.

Motor catalogue M7000 contains information for motor selection and technical explanations.

Drive Expert / MYNORD

The product configurator in the myNORD customer portal (www.mynord.com) is also available as an alternative to catalogues. In this, all drive units, including Ex drive units and their options can be selected for

- Precise configuration.
- Direct generation of CAD- data (3D models, dimensioned drawings, outline drawings).
- Create offers online

It must be emphasised that the configurator indicates whether or not a selected drive unit is ATEX compliant. Price information as well as an enquiry/order form are also included.

Here are some impressions from this program:

NORDBLOC.1 GEARMOTOR

Type name: SK 172.1F /3D - 63S/4 3D TF

PRODUKT KONFIGURATION

DATENBLATT

▼ GETRIEBEMOTOR

Motorleistung (Pn2)	0.12 kW
Drehzahl (n22)	146 1/min
Drehmoment (Ma2)	7.7 Nm
Betriebsfaktor (fB2)	2.2

▼ GETRIEBE

Abtriebsdrehzahl (n2_05)	151 1/min
Max. Drehmoment (Ma_05)	17 Nm
Eingangsdrehzahl (05)	1400 1/min
Eingangsdrehzahl (04)	930 1/min
Abtriebsdrehzahl (n2_04)	100 1/min
Max. Drehmoment (Ma_04)	17 Nm
Eingangsdrehzahl (03)	700 1/min
Abtriebsdrehzahl (n2_03)	75 1/min
Max. Drehmoment (Ma_03)	17 Nm
Eingangsdrehzahl (02)	450 1/min
Abtriebsdrehzahl (n2_02)	48 1/min
Max. Drehmoment (Ma_02)	17 Nm
Eingangsdrehzahl (01)	250 1/min
Abtriebsdrehzahl (n2_01)	27 1/min
Max. Drehmoment (Ma_01)	17 Nm
Ölmenge Hauptgetriebe	0.22

Motorleistung (Pn2)	0.12	kW
Drehzahl (nn2)	1385	1/min
Motor Betriebsfaktor 2	1.00	
Strom (In1)	0.88	A
Strom (In2)	0.51	A
Wirkungsgrad 2 (100%)	50.5	%
Nenndrehmoment (Mn)	0.83	Nm
Massenträgheitsmoment	0.00021	kgm ²
Synchrongeschwindigkeit	1500	1/min
Leistungsfaktor 2	0.62	
Zulässige Umgebungstemperatur	40	°C
Maximale Aufstellhöhe	1000	m
Isolationsklasse	F	
Temperaturklasse	B	
Isolationswiderstand	100	MΩ
Spannung 1	230	VAC
Spannung 2	400	VAC
Phase	3	
Ständerschaltung	D/Y	
Frequenz	50	Hz
Ma/Mn	2.8	
Kippmoment (Mk/Mn2)	2.8	
Ia/In	3.26	
Sattelmoment (Ms / Mn2)	2.7	
Motorlieferant	NORD	
Schalldruckpegel LPA	40	dB
ATEX Staub OT	125	
Einschaltdauer	S1	

Documentation accompanying the order

All deliveries of Ex drives to destination countries in the EU contain complete printed documentation in German, as well as in a language which can easily be understood by the operator.

Customers are requested to state the required language in their request for an offer.

- For Ex gear units, **B2000** is supplied, which specifically deals with explosion protection,

- **B1091** is intended for main operating motors,

- **B1091** and **B1091-1** are intended for motors operated with inverters,

- For use of motor mounted inverters for **Zone 22** documents **B1091**, **B1091-1** and **G4014-1** are supplied.

NORD homepage

All operating and maintenance instructions, spare parts lists and certificates can be found under www.nord.com.

The screenshot shows the NORD homepage with the following elements:

- Logo:** NORD DRIVESYSTEMS
- Top Navigation:** Getriebbau NORD GmbH & Co. KG (with German flag), Contact ENGLISH
- Main Navigation:** Products | myNORD | Documentation | Industries | NORD
- Documentation Section:** A heading "Documentation" followed by the text "To ensure that we always understand you, we communicate with our customers in 20 different languages."
- Document Thumbnails:** Three images representing different types of documentation:
 - Manuals:** Shows a stack of white manuals.
 - Catalogues:** Shows a stack of blue catalogues.
 - Flyers/Brochures:** Shows a stack of brochures with the NORD logo.

Rapid access enables a targeted search for documents:

Abbreviations

2D	Category 2D
3D	Category 3D (non-conducting dust)

ATEX:	ATmosphères EXplosibles
DIN	Deutsches Institut für Normung e.V. [German Standards Institute]
EN	European standard

IE1	Efficiency as per IE1
IE2	Efficiency as per IE2
V/f	Voltage/frequency characteristic curve

Legend / Formula symbols

cos φ	Power factor	M	Torque [Nm] or [%]
T_u	Ambient temperature [°C]	n	Speed [rpm]
T125 / T140	max. surface temperature [°C]	P_N	Rated power [kW]
f_s	Stator frequency [Hz]	R_{St}	Resistance on line [Ω]
f_N	Nominal frequency [Hz]	U_N	Rated voltage [V]
I_N	Nominal motor current [A]		

Notes

Notes

An overview of NORD range

G1000 Fixed speeds

UNICASE housing 50 Hz, 60 Hz

- Helical geared motors
- Parallel geared motors
- Bevel geared motors
- Helical worm geared motors

G4014 Electronic variable speed drives

- NORDBLOC.1 Helical geared motors
- Helical geared motors
- Parallel geared motors
- Bevel geared motors
- Helical worm geared motors

G1050 MAXXDRIVE® Industrial gear units UNICASE housing 50 / 60 Hz

- Parallel-Axis
- Right-Angle

G1035 UNIVERSAL Worm gear units

- SI and SMI

F3018_E3000 Frequency inverter SK180E F3020_E3000 Frequency inverter SK200E

F3060_E3000 NORDAC PRO Frequency inverter SK500P

NORD DRIVESYSTEMS® Group

Headquarters and Technology center
in Bargteheide, Germany, close to Hamburg

Innovative drive solutions
for more than 100 branches of industry

Mechanical products
parallel shaft, helical gear, bevel gear and worm gear units

Electrical products
IE2/IE3/IE4 motors

Electronic products
centralised and decentralised frequency inverters,
motor starters and field distribution systems

Seven state-of-the-art production plants
for all drive components

Subsidiaries and distributors
in 98 countries on 5 continents
provide local stocks, assembly, production,
technical support and customer service

More than 4,000 employees throughout the world
create customer oriented solutions
