Field of use

Mains unit for use in a decentralised electronic drive technology frequency inverter. The voltage / frequency converter which is integrated into the module enables conversion of analogue signals from a potentiometer into a digital pulsed signal. This pulsed signal can be interpreted as an analogue signal by certain digital inputs of the drive electronics.

The module has a water-repellent coating. Reliable operation is retained even with condensation.

Compliance with the radio interference class can only be ensured if the mains filter is active (jumper plugged into the upper position).

In the event of use in non-earthed networks (IT network), the mains filter must be deactivated.

To do this, the jumper must be transferred from the top to the bottom.
