FLEXBLOC & MINICASE®

Innovative Design

FLEXBLOC™ and MINICASE®

This catalog includes two series of worm gear products, the FLEXBLOC™ and MINICASE®. Both products offer you superior performance in a compact package.

FLEXBLOC™

The FLEXBLOC™ (SI Series) is compact universal worm gear housing offering exceptional modularity and adaptability to any mounting position. Accessory kits that are easily assembled by NORD or the customer help to provide maximum flexibility and various mounting possibilities.

Our hollow-bore gear units are quickly converted to solid shaft models using a plug-in shaft kit. The shaft may be extended out either side or both sides of the worm unit; in addition, a longer solid shaft kit may be provided for use with our bolt-on flange-kits.

All FLEXBLOC™ worm modules and accessory kits are stocked at the factory to guarantee quick-shipment upon order. Motorized units are commonly supplied with NEMA or IEC input and NORD motor or brake motor. Special provisions may be made to provide integral motor assemblies.

Key Features:

- Universal foot and flange-mount housings.
- Factory-stocked worm-modules & accessory kits.
- Keyed hollow-bore units with solid shaft kits.
- Adaptable to any mounting position (universal oil fill).
- Easy to assemble accessories.
- NEMA, IEC, or solid shaft input as standard.
- Accommodates stocked C-Face motors or brakemotors.
- Integral motor options available (upon request).

MINICASE®

The MINICASE® (SMI Series) worm gear is a compact worm gear characterized by its smooth outer surface design and its separate foot-mount and flange-mount housings, that are designed to accommodate the bolt-on torque arm or flange kit. NORD's latest MINICASE® worm gear offering is designed to readily accept our FLEXBLOC™ accessory kits.

Standard solid-shaft units are assembled with a one-piece output shaft while specific hollow-bore versions can accommodate the plug-in solid shaft accessory kits as well as bushing kits.

MINICASE® gearmotors and reducers are available with very short lead-times and are assembled from stocked parts. Motorized units are commonly supplied integrally or with a NEMA or IEC input paired with a NORD motor.

Key Features:

- Separate smooth-bodied foot & flange-mount housings.
- Factory-assembled from stocked parts.
- Designed to accommodate FLEXBLOC™ accessory kits.
- Keyed hollow-bore or one-piece solid shaft as standard.
- Specific bores accommodate FLEXBLOC™ plug-in shafts.
- Easy to assemble accessories.
- Commonly supplied with an integral motor or brakemotor.
- Also available with NEMA or IEC input and NORD motor.

Company Overview

Since 1965, NORD has become well established in the power transmission industry and grown to global proportions on the strength of product performance, superior customer service, and intelligent drive solutions.

NORD designs and manufactures drivesystems engineered for adaptability. NORD's improving, expanded and innovative drive solutions are specified and utilized for a range of applications in nearly every industry throughout the world.

NORD Drivesystems' product portfolio is extensive and continuously evolving in order to meet the needs of today's fast-changing markets. NORD's range of drive equipment includes: helical in-line, helical shaft-mount, helical-bevel, helical-worm and worm gear units with torques from 90 lb-in to 2,200,000 lb-in, readily available AC motors from 1/6 HP to 250 HP, variable frequency drives up to 250 HP, & mechanical variable speed drives.

NORD does far more than manufacture the world's finest drive components. We provide our customers with optimum drive configurations for their specific purposes, providing each and every one with truly complete and efficient systems at a price/quality ratio unmatched in today's competitive markets.

Short, On-Time Delivery

As a NORD customer, you can rest assured that your order will be delivered on time. Because NORD has both decentralized assembly and manufacturing operations and a linked global network, we offer our customers:

- Fast, reliable delivery
- Greater product versatility
- Shorter lead times
- Timely shipping
- Global Availability

Global Availability

NORD makes its wide product range easily available through a global network that includes representation in over 60 countries. Providing all customers with prompt delivery, and expert support services, we are firmly committed to exceeding customer expectations and being totally responsive to the ideas and specifications of every customer, anywhere in the world.

Increased North American Presence

NORD covers North America with over 30 district offices and over 500 distributor branches. NORD operates a manufacturing and assembly facility in Waunakee, WI, Charlotte, NC, Corona, CA, Brampton, ON, and Monterrey, Mexico, resulting in an ever-increasing capacity in the United States and Canada and giving our customers the shortest lead times in the industry.

Manufacturing

NORD Gear continually invests in the latest research, manufacturing and automation technology. This ensures our ability to provide you with the utmost quality at an affordable price. Not only do we invest in our North American facilities, we invest in our factories throughout the world. We continually try to improve our practices to provide our customers with the most superior product available.

Quality

Quality is assured at NORD assembly and manufacturing facilities, based on ISO 9000 standards — from careful inspection of incoming materials to closely monitored machining operations including gear cutting, turning, hardening & grinding as well as finishing and assembly.

Worldwide Standards

NORD products are designed and manufactured based on the latest North American and global standards.

Energy Efficiency

Lowering your operating costs is one of our greatest goals! NORD research and development focuses on energy efficiency, with gearboxes, motors, and frequency inverters designed for lower energy consumption. Our fully diverse line of in-line or right-angle units and motors has been developed to suit your needs.

NORD 911

Trouble? Just call 715-NORD-911 (in Canada, 905-796-3606). Emergency service is available 24 hours a day, 7 days a week. We'll answer your call, ship the parts, or build a unit and have it shipped directly to you to provide what you need, when you need it.

Modular Worm Product Introduction

UNICASE® One Piece Housing

FLEXBLOC™ and MINICASE® housings are a heavy-duty one-piece UNICASE® design. Optimally designed internal reinforcements provide increased torsional strength and rigidity. Bearing and seal seats are contained within the casting, eliminating housing splits and bolt-on carriers that can weaken the housing and be more prone to oil leaks. Bores and mounting faces are precisely machined in one set-up ensuring accurate positioning of gears, bearings and seals while providing high load bearing capacity, minimal vibration, low noise and longer life for all components. In addition FLEXBLOC™ and MINICASE® housings are adaptable with versatile mounting options and accessory kits.

- Increased torsional strength and rigidity.
- Eliminates housing splits and bolt-on carriers.
- Leak-free housing design.
- Versatile mounting options and accessory kits.

Aluminum Alloy Housing – High Strength, Light Weight, Corrosion-Resistant

The NORD modular worm products are optimally designed with a high strength, light-weight aluminum alloy housing material. The oxidation layer that forms naturally on the aluminum alloy is inherently corrosion resistant in many applications, making paint and protective surface treatments optional. The aluminum alloy housing conducts heat better than cast iron providing lower internal operating temperatures and ensuring increased service life for the lubricating oil, bearings, seals and gears.

- High strength / light-weight.
- Natural corrosion resistance.
- Optional paint and protective surface treatments.
- Improved heat dissipation.
- Lower operating temperatures.
- Longer overall service life.

Factory Oil-Filled / Maintenance-Free

NORD modular worm gear units are inherently maintenance-free, factory oil filled, and supplied with a high-quality, long-life synthetic gear oil intend to be suitable for the life of the gear unit. Proper lubrication is essential to reduce friction, heat and component wear as well as to help prevent corrosion and oxidation. NORD modular worm gear units as standard supplied with oil plugs in the housing, and vent plugs are optionally offered.

Modular Construction

Modular, flexible mounting options, and common accessories are a core aspect to NORD modular worm gear products.

The FLEXBLOC™ universal worm gear housing offers exceptional modularity and adaptability since all worm modules and input and output accessory kits are stocked at the factory for easy assembly by NORD or the customer.

The MINICASE® gear units are assembled to order from stocked parts and are offered in either a footed-housing or flange-mount/shaft-mount housing. The MINICASE® also shares common input and output options and accessories with the FLEXBLOC™.

Oversized Output Shaft Bearings

NORD modular worm gear units are designed with oversized output bearings. Bearing sizes are significantly larger than required to absorb the internal forces within the gear unit. As a by-product of the larger bearings, the internal shaft diameters increase, resulting in increased shaft strength and durability as well as larger hollow-shaft bore capacities. Compared to competitive worm gear units, NORD'S intentional selection of oversized output bearings provides the following advantages:

- Longer bearing life.
- Ability to support large overhung and thrust loads.
- Larger internal shaft diameters/Increased strength.
- Larger hollow bore capacities.

Optimized Worm-Gear Design

Optimized worm-gear design includes the selection of high quality materials combined with state-of-the-art design techniques and manufacturing. Surface hardened steel pinion gears and bronze-alloy worm wheels are designed for superior wear resistance and long life.

The precise sliding interaction of worm gear teeth eliminates abrupt tooth to tooth contact, and will minimize vibrations as well as noise. The optimization between materials and gear design also provide increased resistance to intermittent shock and overload conditions found in many applications.

- Designed for superior wear resistance / long life.
- Smooth and quiet operation.
- Increased resistance to shock & overload conditions.

Size Offering

The FLEXBLOC™ (SI) and MINICASE® (SMI) gear unit share the following common sizes.

Type	SK 1S1xx / SK 1SM1xx (xx = mm, center distance)				
Center Distance	31 mm	40 mm	50 mm	63 mm	75 mm
	1.2 inch	1.6 inch	2.0 inch	2.5 inch	3.0 inch

Industry-Standard Worm Ratios

NORD FLEXBLOC™ and MINICASE® modular worm gear units cover a wide-range of industry-standard ratios from 5:1 to 100:1.

Standard Worm Ratios											
5	7.5	10	12.5	15	20	25	30	40	50	60	100

- By adding a helical pre-stage option standard ratios are expandable up to 1000:1.
- Compound configurations are easily assembled to create ratios up to 10,000:1.

High Performance Motors and Brake Motors

High performance NORD motors and brake motors are internationally accepted, conforming to North American (NEMA MG 1) and international (IEC) electrical specifications. NORD motors are constructed with high quality materials and insulating components, are designed to run cool as well as provide exceptional service life. Low rotor inertia and high starting torque capabilities allow for peak performance in the most difficult dynamic applications.

NORD motors are inverter and vector duty rated and designed to handle voltage spikes in accordance with NEMA MG 1-2009, Section 31.4.4.2. NORD offers standard-efficiency, high-efficiency and premium-efficiency motors designed to meet the latest global energy requirements. Motor options are numerous and include a wide variety of options such as brakes, thermal overload protection, space heaters, encoders, and forced cooling fans.

Close-Coupled Input Adapters (NEMA or IEC)

Modular worm gear reducers are offered with both NEMA or IEC motor input adapters. The worm pinion shaft includes a male gear spline and the c-face adapter utilizes a one-piece coupling sleeve to offer a compact or close-coupled design. The proprietary light-weight nylon coupling sleeve offers very high torsional stiffness, minimal backlash and low inertia. The coupling is easy to install and helps to eliminate motor misalignment and shaft fretting corrosion that are common with quill-type input adapters.

Worm Modularity with Ease

NORD's compact modular worm product offering includes both the FLEXBLOC™ (SI Series) worm gear with its universal housing and the MINICASE® (SMI Series) worm gear characterized by its smooth outer surface design and its separate foot-mount and flange-mount housings. Exceptional modularity and a unified set of accessory kits provide a complete set of input/output options and easy adaptation into a variety of mounting configurations.

FLEXBLOC™ worm modules and accessory kits are stocked at the factory to guarantee quick-shipment upon order; motorized units are commonly supplied with NEMA or IEC input and NORD motor or brakemotor. MINICASE® gearmotors and reducers are available with very short lead-times and are assembled from stocked parts; motorized units are commonly supplied with an integral motor or brakemotor or with a NEMA or IEC input and NORD motor.

Ordering Information

Our modular worm units are available to order in one of two ways:

1: Ordering by Component Kits

(FLEXBLOC™ units only)

Ordering by component part numbers allows for the ultimate design flexibility. This allows the user to assemble the modular components together in a fashion that best suits the application. NORD offers a price advantage when ordering as component kits since no assembly time is needed at the factory.

Component kits are ordered by the 8-digit part number in the catalog. Each component kit contains the required hardware and assembly instructions to assemble into a complete unit. Component kit availability forms are located on the following pages:

Unit	Pages
SK 1SI31	79
SK 1SI40	81
SK 1SI50	83
SK 1SI63	85
SK 1SI75	87

Example: Single reduction worm module SK 1SI50 with 20:1 reduction, 2 hp - 230/460V motor, and single extension plug-in solid shaft.

- 60592200** (SK 1SI50 module, ratio = 20:1)
- 60595500** (140TC NEMA motor adapter)
- 34610012** (90L/4-145TC motor, 2 hp, 230/460V)
- 60593010** (Plug-in shaft Ø1.00" x 50mm)

2: Ordering a completely assembled unit

(MINICASE® & FLEXBLOC™ units)

When ordering as a completely assembled unit you will need to specify the complete nomenclature and the total gearbox ratio. Additional information may be required depending on the input and output options that are selected. For a guide on ordering as a complete unit see page 6 & 8.

Example: Single reduction worm module with 50:1 ratio, 1 hp motor 230/460V with terminal box position 1, and conduit entry location I, plug-in solid shaft side A, B5 flange side A.

Order a FLEXBLOC™ UNIT as:
SK 1SI50 VF – N56C – 80L/4, 50:1, VA, FA, KK1/I

Order a MINICASE® UNIT as:
SK 1SMI50 AX – 80L/4, 50:1, VA, FA, KK1/I

Selection Information

Gearbox Selection

A number of factors are considered when selecting a gear unit, including gearbox rating, service factor, speed and speed variation, horsepower, thermal capacity, ratio, physical size, ambient conditions and cost. Below are some guideline steps to help aid in the gear unit selection.

1. Determine the speed and/or gear ratio
2. Determine the required power or torque
3. Determine Service Factor
4. Select the basic gearbox type and input
5. Determine the required mounting position
6. Select options
7. Checks – overhung load, thrust load, NEMA motor weight, thermal considerations, and other application considerations

1. Speed and Gear Ratio

The first step in selecting a gear unit is determining the final output speed or speeds you need. This speed is normally described in revolutions per minute (rpm). The output speed or speeds are determined by the input speed to the gear unit divided by its gear ratio. Their relationship is described by the following formulas.

$$i \text{ (gear ratio)} = \frac{\text{Input speed [rpm]}}{\text{Output speed [rpm]}}$$

$$\text{Output speed [rpm]} = \frac{\text{Input speed [rpm]}}{i \text{ (gear ratio)}}$$

To specify a gear unit, you can identify either gear ratio needed or the output speed (rpm) if the input speed is known.

2. Power and Torque

The second step for selecting a gear unit is the required power or torque needed to power the load. Torque in this catalog is normally expressed in pound-inches [lb-in].

$$\text{Power [hp]} = \frac{\text{Torque [lb-in]} \times \text{speed [rpm]}}{63025}$$

$$\text{Torque [lb-in]} = \frac{\text{Power [hp]} \times 63025}{\text{speed [rpm]}}$$

For a proper selection you must ensure that the motor or other prime mover can produce enough torque or power and that the gear unit has adequate torque or power capacity.

To specify a gear unit you can identify torque or power.

3. Service Factor or Service Class

Service factors help ensure reliability and adequate service life in operation by providing the selected gear unit with the extra capacity needed to compensate for operation time, duty cycle, starting conditions and various overload conditions that may be momentary, periodic, quasi-steady state or vibratory in nature. Gear units are typically selected by multiplying the power or load torque at the reducer by the service factor.

For example, a gear unit selected for 24 hour per day operation would normally require a larger service factor than a unit expected to run 8 hours per day. In addition, a gear unit for shredder or a rock crusher should require a higher service factor than a gear unit powering a fan.

Service factor and service class tables have served the gear industry well for a number of years when used by knowledgeable and experienced machine builders and gear industry experts. There are several methods of applying service factor.

Customer or User Specification

Many equipment builders or end users will have their own service factor guidelines or specifications based upon their own experiences with a given gear reducer application.

AGMA Service Factoring & Service Classes

The American Gear Manufacturers Association (AGMA) publishes lists of recommended service factors and service classes in AGMA standards 6013 and 6113. General Information and abbreviated versions of these tables are located on Page 333 - 340.

Both the service factor and service class tables have been determined from the experience of many gear manufacturers over several years. AGMA Service Class is correlated to AGMA Service Factor in the following table:

AGMA Service Class	Minimum Service Factor	Service Factor Range
I	1.0	1.00 to 1.39
II	1.4	1.40 to 1.99
III	2.0	2.00 and above

NORD Mass Acceleration Service Factoring

NORD often uses a calculation based method to properly assign a service factor. This method requires that one determines the Mass Acceleration Factor which is calculated by dividing the ratio of the total systems inertia by the ratio of the total motor inertia.

As the mass acceleration factor increases more torque goes through the gear unit to start the load than what is required to start the motor and as a result produces more "shock" to the reducer. A mass acceleration factor of 2.0 indicates it takes 2 times more torque to accelerate the load than the motor.

This method quantifies the severity of the application and considers the hours of operation per day and the number of times the equipment is cycled to pick a service factor. See page 332 for additional detail.

4. Gearbox Type & Input

FLEXBLOC™ & MINICASE® gear drives are available in the following mechanical configurations including:

- Foot mount
- Flange mount
- Shaft mount
- Foot mount with flange

NORD's modular design allows for a number of different inputs to be added to NORD reducers including:

- Integral motor or brakemotor
- NEMA-C and IEC motor adapter
- Solid input shaft (FLEXBLOC™ only)

5. Mounting Position

The gearbox mounting position is an important and often overlooked specification. Mounting position determines the optional vent plug location. (For vent plug compatibility please see page 21).

For units with integral motor assembly and built-to-order MINICASE® units the oil fill level is based upon mounting position. NORD offers six basic mounting positions. If your application requires a variation from the six basic mounting positions, please contact NORD.

6. Options

NORD offers a number of mechanical, protective, and lubrication options for gear reducers and motors. Please see page 28 for gear unit options and refer to page 221 for motor options.

7. Checks

Overhung Load

An overhung or radial load exists when a force is applied at right-angles to a shaft beyond its outermost bearing. Pulleys, sheaves and sprockets will cause an overhung load when used as a power take-off. The amount of overhung load will vary, depending on the type of power take-off used and where it is located on the shaft.

Calculated overhung load conditions should not exceed the gear unit's capacity in order to avoid a reduction in bearing life and to prevent conditions such as shaft fatigue. Check the applied overhung load condition (F_{OHL}) against the rated capacity by following the procedure in the Technical Section (page 19).

Axial Load Forces (Thrust Loads)

Loads that are directed towards or away from the gearbox along the axis of the shaft are called thrust or axial loads. Output shaft thrust capacity [F_A] can be found in the Technical Information Section (on page 20). Contact NORD for assistance when combined thrust and overhung load conditions exist.

General Warnings & Cautions

Risk of Harm or Personal Injury

Applications where there is an inherent risk of harm or personal injury should be reviewed together with NORD.

Examples of these types of applications include hoists, lifts and many others, if you question the risk involved in your specific application, please do not hesitate to contact NORD for assistance.

NEMA C-Face Adapter Capacity

The NEMA adapters are designed to handle the torques produced by the standard NEMA power assignment at 4 pole (1800 rpm) motor speeds. NORD should be consulted if a NEMA adapter is being used for connecting something other than an AC induction motor, or if a larger motor power than those listed below is used.

Adapter	Max Power [hp]
48C	1/2
56C	1
140TC	2
180TC	5

Motor Adapter Weight Limits

When mounting a motor to a NEMA/IEC adapter it is important to consider the motor's weight. The following table includes the maximum motor weight that our motor adapters can support. If the motor exceeds the listed weight it must be externally supported. When a motor is mounted with an adapter and is externally supported, care must be taken to ensure that the support system does not impose additional pre-loads on the adapter.

NEMA Motor Weight Limit

Motor FRAME	56C	143TC	145TC	182TC	184TC
Max Weight [lb]	66	88	110	130	175

IEC Motor Weight Limit

Motor FRAME	63	71	80	90	100	112
Max Weight [lb]	55	66	88	110	130	175

Overload Conditions

Loads that exceed the gearbox ratings are considered overloads. An overload may either be momentary or periodic in duration, as well as quasi-steady or vibratory in nature. The load magnitude and the number of stress cycles need to be analyzed in order to prevent low-cycle fatigue or yield stress failure.

Refer the following load conditions to the factory:

- The peak momentary or starting load exceeds 200% percent of gear unit's rated capacity.
- Frequent load reversals occur and develop high peak torques during the changes in load direction.
- Heavy repetitive shock loads may occur.
- High-energy loads must be absorbed and high peak torques develop, such as when stalling conditions occur.

Oversized Prime Movers

High torque motors or oversized prime movers are sometimes needed to overcome high energy loads. Recommended operating service factors do not cover instances where oversized prime movers are required. These applications should be reviewed by the factory.

Thermal Capacity

To prevent breakdown and accelerated wear, it is important to observe the gear units thermal capacity limit. Through computer program analysis NORD can evaluate thermal capacity based upon specific operating conditions including: duty cycle, mounting position, gear unit type and ratio, operating load and speed.

Brake Equipped Applications

When a brake is either supplied between the motor and the prime mover or included with a motor, the gear drive must be selected by either the brake's rating or the highest equivalent input power, whichever is greater. If the brake rating is higher than 200% of the rated gear unit capacity, or if the brake is located on the output shaft of the gear drive, the application should be reviewed by the factory.

Wet or Damp Outdoor Installation

Special seals and anti-corrosion measures are required for installation outdoors, in wet or damp environments or in tropical climates.

Exposure to Solar Heating

If a drive is exposed to radiant or solar heating, while operating in the sun at ambient temperatures of 104°F (40°C) or higher, then special protection measures are recommended. This protection can consist of a canopy over the gear drive or reflective paint on the gear drive.

Storage Before Installation

The gear units and motors should be stored in a dry area before they are to be installed. Special measures are required for longer storage. Please request long term storage instructions from NORD Gear or find them on our website at www.nord.com.

Special Conditions & Applications

NORD has experience with many unique applications and has developed a number of design options to meet the requirements for a variety of installations such as agitators, mixers, ventilators, fans, and cooling towers.

Please consult NORD when selecting a gear unit for special conditions or applications. Special conditions may include (but are not limited to):

- Operation that is continuous with frequent or high torque load conditions.
- Input operating speeds will exceed 1800 rpm.
- Gear units that will operate in higher ambient conditions exceeding 40°C (104°F).
- Gear units that will operate in low ambient conditions approaching 0°C (32°F) or lower.
- Extreme high or low temperatures or large temperature fluctuations.
- High atmospheric pressure.
- Vertical reducer configuration is needed. (special reducer options are often necessary)
- Exposure to very high relative humidity (installed outside, in damp rooms, or used in tropical environments).
- Material build-up on the gear unit or motor (dirt, dust, sand, etc.).
- Exposure to aggressive corrosive materials (contaminated air, gasses, acids, bases, salts, etc.).
- Direct contact between the motor and liquid.
- A high degree of environmental protection is required (special sealing, biodegradable oil, special maintenance and servicing needs, low noise, etc.).
- High vibration, rapid accelerations/decelerations, shock or impact such as those found when an external drive chain or belt is used.
- A large inertia or moving mass at the reducer output with a small gear ratio generating very high load conditions at the reducer's input.
- A direct gear drive connection to a mixer or fan shaft that produces high oscillating and bending movements as well as high load forces to the reducer drive shaft and internal bearings.

Modular Worm Product Technical Information

Size Offering

The FLEXBLOC™ (SI) and MINICASE® (SMI) gear unit share the following common sizes.

Type	SK 1SIxx / SK1SMIxx (xx = mm, center distance)				
Center Distance	31 mm	40 mm	50 mm	63 mm	75 mm
	1.2 inch	1.6 inch	2.0 inch	2.5 inch	3.0 inch

Industry-Standard Worm Ratios

NORD FLEXBLOC™ and MINICASE® modular worm gear units cover a wide-range of industry-standard ratios from 5:1 to 100:1.

Standard Worm Ratios												
5	7.5	10	12.5	15	20	25	30	40	50	60	80	100

- By adding a helical pre-stage option standard ratios are expandable up to 1000:1.
- Compound configurations are easily assembled to create ratios up to 10,000:1.

Ratio Multiplier Options

NORD offers many options to multiply the basic worm ratio by utilizing either a helical pre-stage or a compound-worm assembly.

- Size 40, 50 and 63 FLEXBLOC™ and MINICASE® gear units can be extended to form 2-stage helical-worm gear units by adding the optional 10:1 helical gear stage module, resulting in ratios from 50:1 to 1000:1
- With integral or direct-mounted motors, the FLEXBLOC™ and MINICASE® gear unit sizes 40, 50 and 63 can be provided with a highly-compact 5:1 first-stage helical gear set, resulting in ratios from 25:1 to 500:1. FLEXBLOC™ units will be considered upon special request since these units are normally supplied with NEMA or IEC adapter.
- With both the FLEXBLOC™ and MINICASE® gear units, the appropriate double-worm adapter kit can be used to combine two worm units, forming sizes 40/31, 50/31, 63/41, or 75/40 with ratios as high as 10,000:1.

Speed Considerations

The modular worm gear units are designed for continuous operating input speed conditions up to 1800 rpm and are also suitable for short period or intermittent operation with a frequency inverter or vector drive at speeds above 1800 rpm.

Continuous operation at higher input speeds will reduce the life of the gear unit. Please consult with NORD if continuous input speeds above 1800 rpm or intermittent speeds above 2400 rpm are required.

Torque Capacity

The table below defines torque limits for each style of gear unit.

T_{max} : Represents the maximum permissible output torque based upon continuous operation and uniform loading; For adequate service life an appropriate service factor must still be applied to the gear unit selection. Actual torques vary by ratio.

T_{limit} : Represents the ultimate output torque limit at rest, or the short-term torque-limit, without causing damage to the gear unit; The ultimate torque limit is the absolute maximum condition and peak operating loads must never exceed this value. Actual torques vary by ratio.

Type Designations and Torques for NEMA/IEC Motor mounting

Type	NEMA/IEC motor mounting		Torque	
	FLEXBLOC™	MINICASE®	T_{max}°	T_{limit}°
Single-stage worm gear units	1SI31	1SMI31	266	664

	1SMID63/31	2797	3540
	1SMID75/40	3779	5753

① Actual torques vary by ratio

Efficiency

The high efficiencies of the modular worms are achieved by using extremely smooth tooth flanks and synthetic lubrication.

The efficiency of new gear unit increases up to the rated efficiency during initial operation as the worm gearing undergoes a natural run-in process. The power and torque figures listed in the selection tables are based on the rated efficiency (η) after the run-in process is complete.

Efficiencies [η %] - input speed = 1750 rpm													
Worm ratio	5	7.5	10	12.5	15	20	25	30	40	50	60	80	100
SK 1SI/SMI 31	87	83	80	71	72	68	65	56	51	47	43	37	33
SK 1SI/SMI 40	89	85	83	81	76	72	69	61	56	52	48	42	37
SK 1SI/SMI 50	91	88	86	84	80	77	74	66	62	58	54	48	43
SK 1SI/SMI 63	92	90	88	87	83	80	77	70	66	62	59	53	49
SK 1SI/SMI 75	93	91	90	89	85	83	81	70	70	67	64	59	54

The efficiency of worm gears increases with the input speed due to hydrodynamic lubrication within the gearing. Therefore the units have lower efficiency during start-up. This must be considered when sizing the motor for applications that require starting under load. The following table shows standard figures for the start-up efficiency, (η_s) based on the ratio.

Start-Up Efficiencies [η_s %] - input speed = 1750 rpm													
Worm ratio	5	7.5	10	12.5	15	20	25	30	40	50	60	80	100
SK 1SI/SMI 31 to SK1SI/SMI 75	72	67	62	59	53	47	43	36	31	27	25	20	17

Self-Locking and Self-Braking

Worm gear configurations are said to be **self-locking** (or irreversible) when the gear cannot drive the worm pinion. Self-locking occurs when torque applied directly from the output shaft can not cause the input shaft to turn from rest. In theory, self-locking occurs if the lead angle of the worm pinion gear is less than the calculated friction angle (or worm-mesh friction); when this condition occurs the efficiency for reverse driving is zero and the gear unit is therefore irreversible.

Worm gear configurations are said to be **self-braking** if the gear drive comes to a rapid stop from its full operating speed condition, with no noticeable coast-down period, once power is removed from the system (or the motor is turned off).

It is not possible to establish precise or reliable self-locking or self-braking conditions for a variety of reasons.

- The friction angle in the worm mesh decreases rapidly with the start of motion and once motion begins an external force is required to bring the system to a stop.
- Factors that affect the friction angle or amount of friction in the worm mesh may include: the worm lead angle, rotational speed, gear ratio, tooth geometry, gear and worm surface finish and hardness, temperature and type and condition of the lubricant.
- Vibrations from nearby sources, load pulsations and overhauling or back driving loads can upset the static condition of the gearing, reducing the friction angle to a point where motion can occur.

Self-Locking & Self-Braking Tendencies – Modular Worm Gears

Worm Ratio = 5 – 10	Worm Ratio = 15 – 40	Worm Ratio = 50 – 80	Worm Ratio = 100
No self-locking	No reliable self-locking	Self-locking at rest & without vibrations	Self-locking
No self-braking	No reliable self-braking	No reliable self-braking	Self-braking Input RPM < 1500 Size 31, 40, & 50

WARNING

- Due to the unpredictable nature of trying to predict reliable self-locking or self-braking, NORD does not recommend or approve of any worm gear speed reducer in any application where operational self-locking characteristics are relied upon to replace a static or dynamic brake.
- Non-self-locking gearboxes should be selected in applications where load-direction changes (or back-driving) occur during operation. Reducer back-driving can cause a sudden jamming or chatter vibration. This is especially true of applications where the torque used to accelerate the load is greater than the torque used to accelerate the motor (mass acceleration factor, $m_{af} > 1$).
- In speed increaser applications, the slow speed shaft is the driver, and the high speed shaft is driven to an increased speed. For this type of application it is important that the selected gear unit does not exhibit any tendency towards self-locking or self-braking.
- When desired, the user is responsible for evaluating self-locking and self-braking characteristics for the specific in each application. NORD cannot ensure or predict reliable self-locking or self-braking in any given installation.

Modular Worm Product Technical Information

Output Shaft Support Bearings

FLEXBLOC™ and MINICASE® modular worm gear units are designed with oversized output shaft support bearings. Bearing sizes are significantly larger than our competition, providing a number of benefits:

- Longer bearing life.
- Ability to support higher overhung and thrust loads.
- Larger internal shaft diameters (increased output shaft strength).
- Larger hollow bore capacities.

Output Shaft Bearing Sizes

Size	SI/SMI31	SI/SMI40	SI/SMI50	SI/SMI63	SI/SMI75
Bearing	2 x 16005	2 x 6007	2 x 6208	2 x 6211	2 x 6213
Bearing ID	25 mm	35 mm	40 mm	55 mm	65 mm
Bearing OD	47 mm	62 mm	80 mm	90 mm	120 mm

Radial Overhung Load Forces

An overhung or radial load exists when a force is applied at right-angles to a shaft beyond the shaft's outermost bearing. Pulleys, sheaves and sprockets will cause an overhung load when used as a power take-off. The amount of overhung load will vary, depending on the type of power take-off used and where it is located on the shaft.

- Overhung load ratings are published with the acting force at the midpoint of the standard solid shaft extension.
- When the acting force is moved closer to the reducer or supporting bearing, the overhung load capacity goes up and one can expect an increase in bearing life and shaft durability.
- When the acting force is moved further away from the reducer or supporting bearing, the overhung load capacity goes down and one can expect a decrease in bearing life and shaft durability.

Radial Overhung Load Capacity

Overhung load capacity values for the output side of the gear unit are found in the selection tables (pages 43-75 & 125-167). The variables used to define overhung load rating are listed below:

F_R = the output shaft overhung load capacity for either the FLEXBLOC™ or MINICASE® with the plug-in shaft option or the single-solid-shaft that is supplied as the default for MINICASE®.

F_{RF} = the overhung load capacity for either FLEXBLOC™ or MINICASE® when a bolt-on (B5) output flange is used with the long plug-in shaft option or the long single-solid-shaft that is supplied as the default for MINICASE®.

F_{R1} = the overhung load at the center of a solid input shaft assembly (Type W). The capacity ratings are displayed in the table below.

Permissible Overhung Load Force (F_{R1}) at Input Shaft – Type W					
Size	SI/SMI31	SI/SMI40	SI/SMI50	SI/SMI63	SI/SMI75
F_{R1}	N/A	270 lb	270 lb	270 lb	340 lb

Overhung Load Force Calculation

Calculated or applied overhung load conditions should not exceed the gear unit's capacity. Gear unit selections may be checked as follows:

I. Calculate the applied overhung load force (F_{OHL}):

Variable definitions

F_{OHL} or F_{OHL1} = Calculated shaft overhung load

T_2 or T_1 = Torque [lb-in]

n_2 or n_1 = Shaft speed [rpm]

P_1 = Load power at input

η = Gear reducer efficiency [%] ⓘ

D_{OHL} = Pitch diameter of power transmission component [in]

f_z = Power transmission component factor

ⓘ Gear reducer efficiency is an important consideration when ordering worm gear units.

Output shaft equations

$$F_{OHL} = \frac{2 \times T_2}{d_{OHL}} \times f_z \text{ (common equation)}$$

$$F_{OHL} = \frac{2 \times P_1 \times 63025 \times \eta}{n_2 \times d_{OHL} \times 100} \times f_z \text{ (alternate equation)}$$

Input shaft equations

$$F_{OHL1} = \frac{2 \times P_1 \times 63025}{n_1 \times d_{OHL}} \times f_z \text{ (common equation)}$$

$$F_{OHL1} = \frac{2 \times T_1}{d_{OHL}} \times f_z \text{ (alternate equation)}$$

f_z factor table

Transmission Component	Factor f_z	Notes
Gear	1.00	17 teeth or less
Gear	1.15	18 teeth or more
Chain Sprocket	1.40	13 teeth or less
Chain Sprocket	1.20	13 to 20 teeth
Chain Sprocket	1.00	20 teeth or more
Timing Belt Pulley	1.50	-
V-Belt Pulley	1.70	-
Flat Belt Pulley	2.50	-

II. Make certain the calculated overhung load is less than the overhung load rating.

Output shaft overhung load ratings are provided in the gearmotor selection tables (pages 43-75 & 125-167). Input shaft (Type-W) overhung load ratings can be found in the Permissible Overhung Load Force table on the previous page.

IMPORTANT NOTE

Contact NORD for precise calculations in the following instances:

- For checking the actual bearing life based upon applied load conditions.
- If the applied load is not defined at the center of the solid shaft extension (this is especially important if the load is moved away from the shaft center).
- If combined radial and axial load conditions exist.

Modular Worm Product Technical Information

Axial Load Forces

FLEXBLOC™ and MINICASE® modular worm gear units are supported by oversized bearings; therefore, the NORD modular worm gear products can withstand OHL forces in addition to axial or thrust load forces.

Permissible Axial Force (F_A) at Output

Size	SI/SMI31	SI/SMI40	SI/SMI50	SI/SMI63	SI/SMI75
F_A	405 lb	720 lb	1080 lb	1415 lb	1800 lb

IMPORTANT NOTE

It is advisable to contact NORD for precise calculations in the following instances:

- For checking the actual bearing life based upon applied load conditions.
- If combined radial and axial load conditions exist.

Direction of Rotation

The modular worm products have a right-hand worm helix producing a rotational relationship as displayed in the table below; this is an important consideration when determining the final direction of rotation of the gear set. The teeth of the worm pinion twist clockwise as they recede from an observer looking along the lengthwise shaft-axis, causing a clockwise rotation of the shaft when viewed from output-side A.

If The Input Shaft Rotation is:	Than Shaft Side A Rotation is:	Than Shaft side B Rotation is:
CW	CW	CCW
CCW	CCW	CW

Assembly of Shaft Mounted Gear Units & Plug-In Shaft Kits

When installing a shaft-mounted gear unit to a driven machine shaft, or when installing a plug-in shaft into one of the modular worm gear units, apply an anti-seize compound or anti-corrosive lubricant to the mating shafts as shown. Assembly and subsequent dismantling will be aided by the anti-seize agent.

Centering of B5 Output Flange Kits

Standard B5 output flange kits are located off of the seal bore of the B14 flange housing. The shaft seal on the B14 flange surface must be pressed into the gear unit by the distance 'f'. The B5 output flange can be used as a tool in order to evenly press in the radial shaft seal.

Centering of the output Flange

Size	SI/SMI31	SI/SMI40	SI/SMI50	SI/SMI63	SI/SMI75
$\varnothing b H7$	47 mm	62 mm	80 mm	100 mm	120 mm
f	3 mm	3 mm	3 mm	4 mm	4 mm

Importance of Proper Lubrication

Proper gearbox lubrication is essential in order to reduce friction, heat, and component wear. Lubricants reduce heat and wear by inserting a protective “fluid boundary” between mating parts and preventing direct metal to metal contact. Lubricants also help prevent corrosion and oxidation, minimize foam, improve heat transfer, optimize reducer efficiency, absorb shock loads and reduce noise.

Factory Oil-Filled / Maintenance-Free

NORD modular worm gear units are inherently maintenance-free, factory oil filled, and supplied with a high-quality, long-life, synthetic oil which is intended to be suitable for the life of the gear unit.

- FLEXBLOC™ worm gear units are stocked as pre-assembled worm gear modules and accessory kits. They are filled at time of assembly to a universal oil fill, allowing for many mounting position possibilities.
- MINICASE® worm gear units are assembled at the factory from stocked component parts. They are filled at time of assembly in accordance to the specified reducer mounting position.

Optional Vent Kits

FLEXBLOC™ and MINICASE® worm gear units are designed to operate sealed or vented. As a standard the modular worm gear units are factory oil filled and supplied with oil plugs in the housing, making vent plugs optional.

The worm gear units can be supplied with a vent for most installation conditions as indicated in the table below.

Mounting Positions and Vent Compatibility

	M1	M2	M3	M4	M5	M6
SI/SMI 31		✓	✓	✓		✓
SI/SMI 40		✓	✓	✓		✓
SI/SMI 50	✓	✓	✓	✓		✓
SI/SMI 63	✓	✓	✓	✓	✓	✓
SI/SMI 75	✓	✓	✓	✓		✓

Input speed ≤ 1800rpm

NORD can supply two types of vents as indicated. If a vent is desired, the type must be specified at the time of order.

AUTOVENT™

The AUTOVENT™ helps prevent bearing and gear damage by behaving like a check valve to block the entry of foreign material and prevent lubrication contamination from dust particles, moisture and air-borne process chemicals. The breather opens at approximately 0.3-0.9 psi during operation and closes tightly as the gearbox cools. This option is perfect for humid conditions and wash-down environments, helping to maintain proper oil cleanliness, while reducing foaming and oxidation.

! **WARNING** !

To prevent build-up of excessive pressure, sealed vents must be activated as shown prior to gear unit start-up.

Open Vent

A typical gearbox industry open vent option can also be supplied by NORD. This option allows free exchange of air and does not build-up any back pressure inside the gear unit. This option is ideal for many operating conditions where the geared product is used in relatively clean and moisture-free environment.

The standard Open Vent comes with a transportation plug that must be activated or removed prior to gear unit start-up.

! **WARNING** !

To prevent build-up of excessive pressure, sealed vents must be activated as shown prior to gear unit start-up.

Modular Worm Product Technical Information

When to Use a Sealed or a Vented Unit

There are many conditions that should be considered when deciding whether to use a sealed or vented unit.

1. If the duty cycle is intermittent, the run times are short, and any build-up of internal pressure or temperature is relatively low, the sealed unit option may be used.
2. If running continuous and under moderate to high load conditions, worm gears can generate higher operating temperatures and a build-up of internal pressure. In these instances a vent is strongly recommended. Consult NORD if operation at high load conditions is required.
3. If running continuous at 4-pole electric motor speeds (1800 rpm at 60 Hz) or higher, then a vent option is usually recommended. Consult NORD if operation at higher speeds is required.
4. Radial shaft seals produce a hydrodynamic pumping action to help push lubricant back into the gear unit, causing a small amount of ingested air and a small pressure increase (1-2 psi) that does not normally require a reducer vent; however when combined with continuous operation under high load (Condition 2), additional operating pressures will result and a vent should be used.
5. When the environment is contaminated with water, dirt, or other objects that may be ingested into the breather, increased wear of bearings, gearing, and lubrication breakdown may result. In these instances the sealed option or an AUTOVENT™ should be considered.

Maximum Oil Sump Temperature Limit

To prevent reducer overheating, the reducer's maximum oilsump temperature limit must not be exceeded for prolonged periods of operation.

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Synthetic	105°C (220°F)	107°C (225°F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the allowable safe operating temperatures, please consult NORD to discuss alternatives.

Oil Viscosity

The viscosity rating determines the operating oil's resistance to shear under load conditions. Some important viscosity considerations include the following:

- Lightly loaded gears require lower viscosity oils than highly loaded gears.
- Lower viscosity will provide thin oil film, lower friction, higher mechanical efficiency, and better heat removal conditions.
- Higher viscosity will provide thicker oil film, and better resistance to sliding wear, scuffing wear, and galling at high pressure.
- Higher operating temperatures will cause a reduction in viscosity and lower operating temperatures, cause an increase in viscosity or a thickening of the oil.

The standard oil-fill is considered acceptable for most applications. In certain situations an oil viscosity change may be beneficial.

- If the gear unit is exposed to frequent high load conditions. A higher viscosity oil will have a higher film thickness offering better overall resistance to oil shear, sliding wear and scuffing wear in gears and roller element bearings.
- An oil viscosity correction or lubrication change may improve the overall performance when operating the gear unit at very low or high ambient temperature conditions.

Viscosity Index

Viscosity index helps quantify the rate of oil viscosity change with respect to temperature changes. Oils with a reasonably high viscosity index tend to be more stable in a changing temperature environment. The ability of an oil to maintain a small viscosity differential over the operating range of the gearbox provides a more consistent lubricating film and better wear performance.

Synthetic oils typically have a higher viscosity index than mineral oils and polyglycol oils tend to have an exceptionally high viscosity index compared to other synthetic oils like polyalphaolefin or ester based products.

Oil Lubrication Types

Unit Type	ISO Viscosity	Oil Type	Ambient Temperature Range	Manufacturer Brand/Type	Notes
FLEXBLOC™ (inch Bore)	VG680	FG-PG	-5 to 40°C (23 to 104°F)	Klüber / Klübersynth UH 1 6-680	◆ Standard
FLEXBLOC™ (metric Bore)	VG680	PG	-20 to 40°C (-4 to 104°F)	Klüber / Klübersynth GH 6-680	◆ Standard
MINICASE®	VG680	PG	-20 to 40°C (-4 to 104°F)	Klüber / Klübersynth GH 6-680	◆ Standard
MINICASE®	VG680	FG-PG	-5 to 40°C (23 to 104°F)	Klüber / Klübersynth UH 1 6-680	◆ Optional

◆ Stocked Lubricant. Optional lubricants available upon request.

Oil Formulation Codes

PG - Synthetic Polyglycol Oil
 FG-PG - Food-Grade, Synthetic Polyglycol Oil

Grease Options (applied to greased bearings and seal cavities)

NLGI Grade	Grease Thickener	Grease Base Oil	Ambient Temperature Range	Manufacturer Brand/Type	Notes
NLGI 2	Li-Complex	PAO	-25 to 80°C (-13 to 176°F)	Klüber / Petamo GHY133N	◆
	Aluminum	FG	-25 to 40°C (-13 to 104°F)	Klüber / Klübersynth UH1 14-151	•

IMPORTANT NOTES

- Ambient temperature range is a guideline only and should not imply the applicable service temperature range for the gear unit which is dependent upon the components used during assembly, their individual temperature limits, and the actual operating service conditions.
- The viscosity and other properties of a specific lubricant will change based upon ambient conditions, duty-cycle, load, speed, mounting position, and operating temperature of the gear unit.
- The oil-fill options indicated are considered appropriate for most typical worm gear applications. In instances where the gear unit is exposed to frequent high load conditions or the gear unit must operate under extreme low or high ambient temperature conditions, different oil types, viscosity grades, or selection recommendations may be appropriate.
- Avoid using (EP) gear oils in worm gears that contain sulfur-phosphorous chemistries, as these additives can react adversely with bronze worm gears and accelerate wear.
- Food grade lubricants must be in compliance with FDA 212 CFR 178.3570 and qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturer for more information.
- When making a lubrication change, check with the lubrication supplier to assure compatibility and to obtain recommended cleaning or flushing procedures.
- Do not to mix different oils with different additive packages or different base oil formulation types. Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral or polyalphaolefin (PAO) oils.

Mounting Positions

The gearbox mounting position is an important and often overlooked specification. NORD offers six basic mounting positions. If your application requires a variation from the six basic mounting positions, please contact NORD.

Mounting position helps determine the location of the optional vent plug. The oil fill level on MINICASE® gear units and any integral motor worm gear units will be determined by mounting position. FLEXBLOC™ gear units are supplied with a universal oil fill level for all mounting positions and motors are typically connected using a motor adapter (NEMA or IEC).

NORD Worm Gear Modules

NEMA & IEC MOTOR ADAPTERS 32

For attaching standard motors

Kit contains:

- Adapter flange
- Coupling
- Nuts and bolts

HELICAL INPUT STAGE (H10) 33

Helical 10:1 gear set
Fits all size gearboxes
Lifetime synthetic lubricant
Sealed unit

Kit contains:

- Pre-assembled unit
- Bolts

SOLID INPUT SHAFT (W) 32

Fits all size gearboxes
Lifetime lubricant
Sealed unit

Kit contains:

- Pre-assembled unit
- Bolts

DOUBLE WORM ADAPTER 33

Mounts the SK 1SI31 to the input of the larger SK 1SI/SMI40 - 1SI/SMI75 to produce a high reduction double worm gear unit

Kit contains:

- Adapter flange
- Coupling
- Shaft
- Keys
- Bolts

NORD C-FACE MOTORS & BRAKEMOTORS 32

3 phase, 230/460, 60 Hertz

3 phase, 575V, 60 Hertz

Options:

- Power off brake
- Numerous brake options
- Thermistor temp. sensors
- Thermostat temp. sensors
- Blower fan
- Encoders
- Space heater
- Canopy drip covers
- Encapsulated windings
- End bell drain holes

PLUG-IN SOLID SHAFT (V) (L) 30

Inch dimensions with standard keys
Plug into standard hollow shaft
Install on either side

Kit contains:

- Shaft
- Keys
- External snap ring

Options:

- Double solid shaft

B5 OUTPUT FLANGE (F) 31

Multiple flanges available for each size gearbox. Flange pilots are centered in seal bore.

Kit contains:

- Die cast flange
- Bolts

SHAFT PROTECTION COVER (H) 30

Seals shaft end Safety protection from rotating shaft

Kit contains:

- Cover
- Bolts

FOOT PLATE (X) 31

Mounts to the bottom of the FLEXBLOC™ to provide drop-in compatibility with many worm gear reducers.

Kit contains:

- Foot plate
- Bolts

TORQUE ARM (D) 31

For shaft mounting
Rubber shock absorber installed in attachment end

Kit contains:

- Torque arm
- Bolts

SHAFT BUSHING (J) 30

Hollow shaft bushing for increased bore flexibility

- Bushings with set screw
- Key

FIXING KIT (B) 32

Prevents axial movement of the reducer during operation

- Retaining Washer
- Cap Screw
- Snap Ring
- Plastic Cover

One-piece solid-shaft design is standard for all MINICASE® worm gear units.

MINICASE® AX or AZ housing configurations, with the standard bore size will accommodate the FLEXBLOC™ plug-in style shafts.

* Consider NEMA or IEC input with NORD motor. * Not offered in combination with H (shaft cover) option

Modular Worm Options

Hollow Shafts (Standard)

Our modular worm gearboxes feature standardized hollow shafts. The key is not provided for hollow shaft reducers. Key sizes are provided in the table below. Several alternate bore size options are available for the MINICASE® gear units (page 207)

Standard Hollow Shaft Bore Diameters					
Type	1SI/SMI31	1SI/SMI40	1SI/SMI50	1SI/SMI63	1SI/SMI75
Inch Key	3/16 x 3/16 x 5/8	1/4 x 1/4 x 1	1/4 x 1/4 x 1-1/8	3/8 x 3/8 x 1-7/16	1/2 x 3/8 x 1-15/16
mm Key	5 x 5 x 14	6 x 6 x 18	8 x 7 x 25	8 x 7 x 25	10 x 8 x 35

Hollow Shaft Bushing (J)

Hollow shaft bushing kits will work with FLEXBLOC™ and MINICASE® units with the standard inch hollow bore size. This option allows greater bore flexibility. A hollow shaft bushing kit contains two bushings, one for each side, with a set screw and key.

Type	Reducer Bore Diameter [In]	Bushing Bore Diameter [In]	Kit Part Number [In]
SK 1SI/SMI50	1-1/8	1	60593400
SK 1SI/SMI63	1-7/16	1	60693400
	1-7/16	1-1/4	60693420
SK 1SI/SMI75	1-15/16	1-3/16	60793430
	1-15/16	1-1/4	60793400
	1-15/16	1-7/16	60793420
	1-15/16	1-1/2	60793410

Solid Shaft (V)

The solid shaft comes as two separate options depending on the worm unit itself. Standard FLEXBLOC™ product line is only available as a hollow bore gear unit with plug-in shafts. On all MINICASE® gear units we provide a single piece solid shaft as standard. You may also order your MINICASE® gear unit with a hollow bore that is provided with a plug-in shaft kit.

The plug-in solid shaft inserts into the standard hollow shaft worm module thus converting it to a solid output shaft unit. Three plug-in shaft options are available: single solid shaft extension, double solid shaft extension (L), and single solid shaft extension with a B5 flange (VF). The solid shaft can be assembled onto either side of the gear unit. The kit contains the shaft, keys, and snap rings.

Standard Solid Shaft Diameter					
Type	1SI31	1SI40	1SI50	1SI63	1SI75
Dia. (In)	5/8	3/4	1	1-1/8	1-3/8
Dia. (mm)	14	18	25	25	35

Standard Solid Shaft Diameter					
Type	1SMI31	1SMI40	1SMI50	1SMI63	1SMI75
Dia. (In)	1/2	3/4	1	1-1/4	1-3/8
Dia. (mm)	14	18	25	25	35

Shaft Cover (H)

The shaft cover seals the shaft end & provides protection from the rotating shaft. The kit contains the cover and bolts and may be assembled to either side of the housing.

Hollow Shaft with B5 Flange (AF)

A B5 flange provides a simple, large diameter mounting flange with clearance holes. Multiple B5 flanges are available for each gearbox size. The B5 flange kit contains the diecast aluminum flange and attachment bolts. The flange kits are centered off of the reducer seal bore (page 20).

Solid Shaft with B5 Flange (VF)

Solid shafts that are provided with B5 flanges are extended so that the shoulder of the shaft lines up with the edge of the flange. Because of this the useable shaft length is accessible to be used however it is necessary.

Once again our MINICASE® gear units are provided with a single piece solid shaft as standard with the option of a plug-in shaft mode. Our FLEXBLOC™ units are provided solely as plug-in shaft models.

B14 Flange (Z)

The NORD B14 flange consists of threaded holes and a centering pilot machined into the reducer housing. It is commonly used to secure the reducer to the application machine base or to mount many bolt on components such as a B5 flange, torque arm, or shaft cover.

Double Solid Shaft (L)

The double solid plug-in shaft inserts into the standard hollow shaft worm module converting it into a unit with a solid shaft extension on both sides. The kit contains the shaft, keys, spacers and snap rings.

Torque Arm (D)

The torque arm is a compact and simple way to secure hollow shaft gear units. The NORD torque arm attaches to the B14 flange on either side of the housing module and can be rotated in 45 degree increments. The tear drop shaped torque arm contains a rubber bushing located at the fastening hole-end to act as an absorber reducing peak shock loads. The torque arm kit contains the torque arm, bushing, and attachment bolts.

Foot Plate or Foot Housing (X)

The footplate mounts to the bottom of the FLEXBLOC™ module to provide drop-in compatibility with many competitor worm gear units. The footplate is available for all FLEXBLOC™ modules except the SK 1S175.

Modular Worm Options

NEMA & IEC Motor Adapters (NEMA __ , IEC __)

Compact in length, the NEMA and IEC motor adapters allow for the attachment of standard NEMA motor sizes 48C thru 184TC and IEC sizes 56 thru 112. The motor adapter kit includes the flange, coupling and attachment hardware.

NORD C-Face and IEC Motors

High performance stocked NEMA C-face motors are offered in standard efficiency, energy efficient and brakemotor designs. They are available in 208V-60Hz, 230/460V-60Hz and 575V-60Hz design and are inverter duty. The NORD stock motors will bolt directly to the appropriate NEMA or IEC adapter and power the worm module. Part numbers for stock NEMA motors are on page 90 and page 168.

NORD will also assemble a NEMA C-face or IEC motor for your special requirements. We offer a range of environmental, electrical, inverter and brake and options that will suit your application. For more information on motor options see page 221.

Solid Input Shaft (W)

Designed to mount couplings, sheaves or sprockets, which transfer torque from the prime mover; the NORD solid input shaft kit is available as inch or metric design. It is available for sizes SK 1SI/SMI40, SK 1SI/SMI50, SK 1SI/SMI63 and SK 1SI/SMI75. The solid input shaft attaches to the worm module, 10:1 helical input (H10) and double worm adapter. The solid input shaft kit contains the preassembled unit, bolts and has sealed for life bearing lubricant.

Fixing Kit (B)

Due to the slight oscillations inherent in any rotating shaft, NORD offers an optional "fixing element kit". This is a method to prevent the reducer from "walking out" of position. The kit includes all necessary parts to secure the shaft in the axial direction by using a tapped hole in the end of the mating male shaft.

There are two methods for securing the fixing element kit. The first involves pulling the customer supplied male shaft to the snap ring (type 1) and the second method the customer supplied shaft is shouldered (type 2) and pulled against the hollow shaft and not the snap ring.

5:1 Helical Input Stage

The 5:1 helical input stage provides a 5:1 helical gear ratio to increase the total ratio when applied to a gear module. The 5:1 is sealed for life with synthetic lubricant. The kit is available for the SK 1SMI40, SK 1SMI50, SK 1SMI63 and contains the preassembled unit and the attachment bolts. This option is only available with MINICASE® units when the motor is mounted directly (SMID).

10:1 Helical Input Stage (H10)

The H10 helical input stage provides a 10:1 helical gear ratio to increase the total ratio when applied to a gear module. The H10 is sealed for life with synthetic lubricant. The kit is available for the SK 1SI40, SK 1SI50, SK 1SI63 and contains the preassembled unit and the attachment bolts. This option is only available when the motor is mounted separately (NEMA, IEC or W-input). See pages 114 and 202 for additional details.

Double Worm Gear Units

The double worm adapter allows two worm modules to be assembled together to produce a high reduction double worm gear unit. The kit contains the adapter flange, coupling, shaft, keys and attachment bolts.

Long Term Storage (LL)

Speed reducers are frequently put in storage prior to installation for long periods of time and in some cases exposed to the elements. NORD's long term storage option protects the unit from moisture or corrosion by coating all unpainted surfaces with a dry, transparent, durable waxy film. Once installation is necessary this waxy film can be easily removed with a commercial de-greaser or petroleum solvent. If possible the store room should be vented and dry, with room temps between 23°F and 104 °F (-5 °C and 40 °C).

AUTOVENT™

The AUTOVENT™ helps prevent bearing and gear damage by behaving like a check valve to block the entry of foreign material and prevent lubrication contamination from dust particles, moisture and airborne process chemicals. The breather opens at approximately 0.3-0.9 psi during operation and closes tightly as the gearbox cools. This option is perfect for humid conditions and wash-down environments, helping to maintain proper oil cleanliness, while reducing foaming and oxidation.

Open Vent (OV)

Modular worm gear units are available with an optional open vent. An industry-typical open vent option can also be supplied by NORD. This option allows free exchange of air and does not build-up any back pressure inside the gear unit. This option is ideal for many operating conditions where the geared product is used in relatively clean and moisture-free environment.

Consult page 21 for a detailed description of both vent options and for recommendations as to when venting the gear unit is appropriate.

Type	Installation	Part Number
AUTOVENT™	Factory	220080561
Open Vent	Factory	22008004 (vent)
		25308121 (gasket)
Open Vent	Field site	60693500 (No Transportation Plug)

Modular Worm Options

Paint Free Design

FLEXBLOC™ & MINICASE® housings are made from corrosion resistant die-cast aluminum alloy and feature a smooth body design. The aluminum alloy surfaces have natural corrosion protection; in many cases making paint optional.

Paint Coatings

NORD's standard paint coating is a two component, aliphatic polyurethane finish containing 316 stainless steel material. This gray stainless steel paint has excellent appearance and outstanding physical properties. It is suitable for both indoor and outdoor applications.

Advantages of NORD's stainless steel two component polyurethane:

- Excellent adhesion to cast iron, aluminum, steel, and plastics
- Excellent corrosion resistance
- Excellent chemical resistance
- Excellent gloss and color retention
- Suitable for indoor and outdoor exposure
- Nonporous and excellent abrasion resistance
- Suitable for use in a USDA inspected facility

NORD also offers a variety of severe duty paint coatings that provide a high level of protection against water and severe environments both indoors and outdoors. NSD+ (NORD Severe Duty) consists of a primer undercoat and a stainless steel polyurethane topcoat. For the most demanding environments, NORD offers NSD-X3 (NORD Severe Duty triple coated) which consists of a primer undercoat, stainless steel polyurethane coating, and a clear topcoat. Paint coatings are also available in alternate colors as seen in the table below.

Additionally a variety of coating options are available including our Severe Duty coatings:

Finish	Color	Coating	Use
Standard (stainless steel paint)	Stainless steel silver (Gray)	1 x Stainless steel (316) top coat (polyurethane)	Indoor or outdoor moderate environment
Alternate color	Black, Blue, Red, Orange	1 x Color top coat (polyurethane)	Indoor or outdoor protected

NSD+

NORD Severe Duty + NSD+	Stainless steel silver (Gray)	1 x Primer high solid alkyd system 1 x Stainless steel (316) top coat (polyurethane)	Indoor or outdoor moderate environment
NORD Severe Duty +W NSD+W	White	1 x Primer high solid alkyd system 1 x White top coat (polyurethane)	Indoor or outdoor moderate environment
Alternate color NSD+	Black, Blue, Red, Orange	1 x Primer high solid alkyd system 1 x Color top coat (polyurethane)	Indoor or outdoor moderate environment

NSD-X3

NORD Severe Duty Extreme NSD-X3	Stainless steel silver (Gray)	1 x Primer high solid alkyd system 1 x Stainless steel (316) (polyurethane) 1 x Clear top coat (polyurethane)	Indoor or outdoor more severe environment
NORD Severe Duty Extreme NSD-X3W	White	1 x Primer high solid alkyd system 1 x White (polyurethane) 1 x Clear top coat (polyurethane)	Indoor or outdoor more severe environment
Alternate color NSD-X3	Black, Blue, Red, Orange	1 x Primer high solid alkyd system 1 x Color (polyurethane) 1 x Clear top coat (polyurethane)	Indoor or outdoor more severe environment

Special colors and paints possible please contact NORD with your specific requirements.

NSD TupH

As a leader in the power transmission industry, NORD Gear is committed to providing value to industries where end users demand durable equipment to withstand a variety of harsh environments. The market has long awaited a product with such a large range of standard reducers with the corrosive resistance properties of a stainless steel product without the excessive cost.

In response to these demands, NORD Gear has begun utilizing an electrically catalyzed process to create a uniform case depth protective surface with its existing aluminum alloy housing material. Combined with a sealer, NORD's corrosion resistant cleanable Sealed Surface Conversion system (NSD^{tupH}) allows existing aluminum alloy housings to be protected with a base finish that is 6X-7X harder than aluminum alloy. With its stainless steel hardware, optional stainless steel shafts, optional stainless steel motors and optional food grade lubricants, NORD's NSD^{tupH} is the optimal package for applications in a variety of incredibly harsh environments.

Paint simply lies on top of the substrate and may even bridge across pores in the metal. Since paint does not form a permanent bond to the substrate, it can easily release at very low stress levels.

■ Paint ■ Aluminum Surface

The NSD^{tupH} process includes a base layer that is permanently bonded to the substrate and provides a powerful foundation for adhesion of the surface sealant. This foundation provides excellent roughness, is 6-7x harder than the aluminum substrate and up to 1000x harder than paint.

■ Sealer ■ Aluminum Surface
■ Surface Conversion

nsd^{tupH} System Package

- Standard Electrolytic processed reducer housing
- Standard Stainless Steel Hardware
- Standard C-Face Gasket included
- Housings surfaces are self draining
- Food Grade H1 Synthetic Lubrication (optional)
- Stainless Steel output shafting (optional)
- Stainless Steel C-Face Inverter Duty motor up to 10HP (optional)
- 3 Year Warranty when supplied with synthetic lube

nsd^{tupH} is Useful in Many Harsh Environments

(not limited to but including)

- Chemical wash down
- Damp and wet environments
- Marine / Coastal
- Food & Beverage industry
- Car Wash
- Dairy
- Pharmaceutical
- Water and waste treatment

Some of the Many Benefits of nsd^{tupH}

- Cost effective alternate to stainless steel
- Corrosion resistance
- Chip resistance
- Non propagating from scratches or other blemishes
- Highly Cleanable low friction surface
- Non-porous
- Lighter than stainless
- Chemical resistant
- Elimination of galvanic corrosion
- Surface conversion is 1000X harder than paint

Examples of Available FLEXBLOC™ Units with Hollow Shaft Design

SK 1S150 - N56C - 71S/4
Flexbloc Worm Unit
Hollow Shaft,
One Stage

SK 1S150F - N56C - 71S/4
Flexbloc Worm Unit
Hollow Shaft,
Flange Side A
One Stage

SK 1S150D - N56C - 71S/4
Flexbloc Worm Unit
Hollow Shaft,
Torque Arm Side A
at 180°, One Stage

SK 1S150/H10F - N56C - 71S/4
Flexbloc Worm Unit
Hollow Shaft,
Flange Side A,
Helical Input Stage T1,
Two Stages

SK 1S150/31 - N56C - 71S/4
Flexbloc Worm Unit
Hollow Shaft,
Double Worm U1,
Two Stages

SK 1S150H - N56C - 71S/4
Flexbloc Worm Unit
Hollow Shaft,
Shaft Cover Side A,
One Stage

Examples of Available FLEXBLOC™ Units with Solid Shaft Design

SK 1S150V - N56C - 71S/4
Flexbloc Worm Unit
Solid Shaft Side A,
One Stage

SK 1S150VF - N56C - 71S/4
Flexbloc Worm Unit
Solid Shaft Side A,
Flange Side A
One Stage

SK 1S150L - N56C - 71S/4
Flexbloc Worm Unit
Double Solid Shaft,
One Stage

SK 1S150/H10V - N56C - 71S/4
Flexbloc Worm Unit
Solid Shaft Side B,
Helical Input Stage T1,
Two Stages

SK 1S150/31VF - N56C - 71S/4
Flexbloc Worm Unit
Solid Shaft Side A,
Flange Side B,
Double Worm U1,
Two Stages

SK 1S150VH - N56C - 71S/4
Flexbloc Worm Unit
Solid Shaft Side B,
Shaft Cover Side A,
One Stage

3 Plug in Shaft - Inch 122	Part Number	
Shaft	1.000" x 50mm	60593010
Double Shaft	1.000" x 50mm	60593110
Shaft for Output Flange B5	1.000" x 50mm	60593210
Plug in Shaft - Metric 122	Part Number	
Shaft	25mm x 50mm	60593000
Double Shaft	25mm x 50mm	60593100
Shaft for Output Flange B5	25mm x 50mm	60593200

4 Hollow Shaft Bushing 103	Part Number	
Hollow Shaft Bushing	1.00"	60593400

5 Output Flange B5 103	Part Number
I Flange - 160mm	60593800
II Flange - 125mm, Square Flange, Female Pilot	60593810
III Flange - 125mm, Square Flange, Male Pilot	60593820

6 Shaft Cover 103	Part Number
Shaft Cover	60593950

7 Torque Arm 103	Part Number	
130 mm Torque Arm	I	60593900
110 mm Torque Arm	II	60593920
100 mm Torque Arm	III	60593910

8 Foot Plate 103	Foot Hole Dimensions	Part Number
Foot Plate	0.64" / 4.69"x 6.38"	60594600

Open Vent (Not shown in image)	Part Number
Open Vent	60693500
AUTOVENT™	22008056

9 Helical Input Stage 114	Part Number
Helical Input Stage H10	60494000

10 Double Worm Adapter 116	Part Number	
Inch	0.625" (requires 11)	60494110
Metric	14mm (requires 11)	60494100

11 Double Worm Unit	Part Number		
Inch	SK1SI31	0.625" bore	Ratio Specific*
Metric	SK1SI31	14mm bore	Ratio Specific*
*For module ratio and Adapter combination see page 79			
If 10 is an inch adapter 11 must be selected as an inch bore.			

12 Solid Input Shaft 119	Part Number	
Solid Input Shaft	0.625" x 1.57"	60494210
Solid Input Shaft	16mm x 40mm	60494200

14 Fixing Kit	Part Number
Fixing Kit (Inch)	60282930
Fixing Kit (Metric)	60282310

15 C-face 230/460V-60Hz Standard Efficiency Motor	Part Number	
63S/4-56C	230/460V-60Hz, 1/6 hp	31110012
63L/4-56C	230/460V-60Hz, 1/4 hp	31610012
71S/4-56C	230/460V-60Hz, 1/3 hp	32110012
71L/4-56C	230/460V-60Hz, 1/2 hp	32610012
80S/4-56C	230/460V-60Hz, 3/4 hp	33110012
80L/4-56C	230/460V-60Hz, 1 hp	33610022

C-face 575V-60Hz Standard Efficiency Motor	Part Number	
63S/4-56C	575V-60Hz, 1/6 hp	31110013
63L/4-56C	575V-60Hz, 1/4 hp	31610013

Helical Input Stage H10 SK 1SI40 - SK 1SI63 (NEMA)

Helical Input Stage (H10)

The helical input stage has a ratio of 10:1. This input stage can be attached to the wormgear modules SK1SI40, SK1SI50, and SK1SI63. Using the module helical input enables the building of 2-stage helical-worm drives.

Examples of Available Helical-worm Units with Solid Shaft Design

SK 1SMID50VX - 80 S/4
Minicase Worm Unit
Solid Shaft Side A,
Foot Mounted
One Stage

SK 1SMID50VF - 80 S/4
Minicase Worm Unit
Solid Shaft Side A,
B5 Flange Side A,
One Stage

SK 1SMID50VZ - 80 S/4
Minicase Worm Unit
Solid Shaft Side A,
B14 Flange Side A,
One Stage

SK 1SMID50LX - 80 S/4
Minicase Worm Unit
Double Solid Shaft,
Foot Mounted
One Stage

SK 2SMID50VX - 71 S/4
Minicase Worm Unit
Solid Shaft Side A,
Foot Mounted
5:1 Helical Input
Integral Motor Only

SK 1SMI50 - H10VX - 56C
Minicase Worm Unit
Solid Shaft Side A,
Foot Mounted
10:1 Helical Input
56C Nema Input

Examples of Available Helical-worm Units with Hollow Shaft Design

SK 1SMID50AX - 80 S/4
Minicase Worm Unit
Hollow Shaft,
Foot Mounted
One Stage

SK 1SMID50AZ - 80 S/4
Minicase Worm Unit
Hollow Shaft,
B14 Flange Side A,
One Stage

SK 1SMID50AF - 80 S/4
Minicase Worm Unit
Hollow Shaft,
B5 Flange Side A,
One Stage

SK 1SMID50AZD - 80 S/4
Minicase Worm Unit
Hollow Shaft,
B14 Flange Side A,
Torque Arm Side A
at 180°, One Stage

SK 2SMID50AX - 71 S/4
Minicase Worm Unit
Hollow Shaft,
Foot Mounted,
5:1 Helical Input
Integral Motor Only

SK 1SMI50 - H10AF - 56C
Minicase Worm Unit
Hollow Shaft,
B5 Flange Side A
10:1 Helical Input
56C Nema Input

Helical Input Stage H10 SK 1SMI40 - SK 1SMI63 (NEMA)

Helical Input Stage (H10)

The helical input stage has a ratio of 10:1. This input stage can be attached to the wormgear modules SK1SMI40, SK1SMI50, and SK1SMI63. Using the module helical input enables the building of 2-stage helical-worm drives.

NEMA C-Face Motors

The National Electrical Manufacturers Association (NEMA) provides standardization of electrical equipment, enabling customers to select from a range of safe, effective and compatible products. A NEMA C-face motor has a machined face with a pilot and threaded holes for direct mounting onto a NORD reducer or other industrial equipment. NORD offers NEMA C-face motors stocked as finished goods and will also assemble NEMA C-face motors to your specifications. For ratings, see page 236.

Stocked NEMA C-Face Motors

Stocked NEMA C-face motors are offered in standard efficiency, energy efficient and in a brakemotor design. They are available in 230/460V-60Hz and 575V-60Hz up to 10 hp. Part numbers for stocked NEMA C-face motors are in the table below.

Assembled per Order NEMA C-Face Motors

NORD will assemble a NEMA C-face motor to your specifications based upon the available motor options from this catalog.

♦ 230/460V motors have brake systems supplied with 230VAC to a GVE20L rectifier that outputs 205VDC to the brake coil

* 575V motors have brake systems supplied with 575VAC to a GHE50L rectifier that outputs 250VDC to the brake coil

Standards

All motors are in accordance with existing standards and regulations:

NEMA MG 1 - Motors and Generators:

- Electrical performance
- Motors for operation on variable AC vector drive

UL 1004 – Electric Motors

CSA C22.2 No. 100-04 - Motors and Generators:

Industrial Products

IEC 60034 parts 1, 5, 6, 8, 9, 11, 12 and 14.

- Part 1 – General rules
- Part 5 – Types of enclosures
- Part 6 – Types of cooling
- Part 8 – Terminal lead designations and sense of rotation
- Part 9 – Noise limits
- Part 11– Integrated thermal protection
- Part 12– Starting Performance
- Part 14– Mechanical vibration

INVERTER DUTY MOTOR

Inverter/Vector Duty

NORD single-speed motors are Inverter/Vector Duty. The construction of the NORD motors insulating system takes into account the non-sinusoidal wave forms produced by variable frequency drives. NORD uses high grade insulating components and extra first turn protection as well as double coated wire to ensure long service life when connected to AC vector drives. NORD motors can produce full torque at zero speed if properly sized, selected and controlled.

IEC 60038 – Standard voltages

	NORD motors carry the CE mark in accordance with the Low Voltage Directive and, if installed properly, the Electromagnetic Compatibility Directive (EMC). The CE mark is required for installation in European Union (EU) states.
	Many NORD motors from frame size 63 to 315 are an Underwriters Laboratories Recognized component per UL standard 1004. Frames 63-180 File number E191510 Frames 200+ File number E227215
	The Canadian Standards Association CUS mark indicates that CSA has tested and approved NORD motors according to both US and Canadian standards. It is equivalent to the Underwriters Laboratories RU recognition mark (UL standard 1004) and the CSA mark according to CSA Standard C22.2 No. 100-04 Frames 63-180 File number LR112560 Frame 200+ File number LR13494
	NORD Energy Efficient motors up to frame 180 have been evaluated by the United States Department of Energy and received a Certificate of Compliance to certify the efficiency ratings. The certificate of compliance is CC 092B.
	NORD Premium Efficient motors up to frame 180 have been evaluated by the United States Department of Energy and received a Certificate of Compliance to certify the efficiency ratings. The certificate of compliance is CC 092B.
	NORD energy efficient motors carry the CSA energy efficiency verification mark. This mark ensures that CSA has verified that NORD motors are designed and manufactured to meet energy efficiency requirements number EEV112560.
	China Compulsory Certification Nr.: 200 701 040 125 842 9
	GOST® certificate for the import of motors into Russia.

For more information on current motor efficiency regulations please see page 246.

Standard Motor Construction

Our motors are an important part of our ability to provide a high quality, competitive, and complete drive system. NORD motors are designed for across the-line or inverter/vector duty operation. NORD motors are constructed with superior insulating methods to provide excellent moisture protection, low temperature rise, and voltage spike resistance in accordance with NEMA MG1. Low rotor inertia and high starting torque allow peak performance in difficult applications involving high start/stop cycling rates or rapid acceleration/deceleration. Standard motors offer protection from the elements with many standard and optional design features.

Some of the standard design benefits include:

- Shaft lip seals on both ends of the motor shafts.
- Stator to endbell connections sealed to exclude moisture.
- Double coated magnetic wire insulation.
- Inverter/vector duty insulation system conforms to NEMA MG1-2009, section 31.4.4.2 voltage spikes.
- Moisture resistant varnish dipped windings with improved varnish materials.
- Inorganic insulating components for tropical protection.
- Conduit box sealed with gaskets.
- Corrosion resistant alloy materials.
- Threaded cable entry holes.

Terminal Block

Each NORD motor uses a terminal block, which is a superior method of wire termination when compared to pigtail leads. A terminal block ensures long-term reliability of the power connections.

Non-Sparking Fan

The standard NORD motor fan is a non-sparking design. The fan will also provide proper airflow in either direction of rotation.

Inverter/Vector Duty – Voltage Spikes

All NORD motors are constructed with an insulating system designed to withstand the repeated voltage spikes generated by modern AC vector drives. The insulation system withstands the ratings in conformance with NEMA MG 1-2009 Section 31.4.4.2 Voltage Spikes.

$$V_{\text{peak}} = 3.1 \times V_{\text{rated}} \text{ with a Rise time } \leq 0.1\mu\text{s.}$$

Insulation System

The NORD motor insulation system is designed to provide a superior degree of protection. NORD utilizes the following insulation components:

- Magnet wire – double coated insulation
- Varnish dip impregnation
- Slot liners
- Phase paper & separators
- Top sticks
- Wire sleeve connectors

Other motor manufacturers eliminate some of these insulating components for cost reduction which leads to less reliability.

Tropical Protection (Anti-fungal)

As a standard the NORD motor insulation system is tropically protected. The insulating and construction components are made of inorganic materials that resist fungal growth.

Low Inertia

The motor inertia in all NORD motors is extremely low which allows for an increased dynamic motor control capability. Low motor inertia is a significant advantage when using NORD motors with AC vector drives or controllers. NORD motors have the ability to cycle more frequently and require less mechanical energy to start than the standard NEMA frame motors. This leaves more energy to start the load.

High Torque

NORD motors produce a higher starting torque than what is required by NEMA standards. This is achieved through improved motor winding, rotor design and construction.

Service Factor

NORD motor's with ratings of either 230/460V-60Hz and 332/575V-60Hz have a service factor of 1.15. Almost all other motors have a service factor of 1.1 or 1.0.

Poles / speeds

NORD offers a variety of single and two speed motors in addition to the standard 4 pole motor. NORD single speed motors are inverter/vector duty rated, however, it is not recommended to run a NORD two speed motor with an AC vector drive.

Number of Poles	Synchronous Speed at 60Hz	Synchronous Speed at 50Hz	Notes:
Single Speed Motors			
4	1800 rpm	1500 rpm	-
2	3600 rpm	3000 rpm	-
6	1200 rpm	1000 rpm	-
Two Speed Motors			
4-2	1800/3600 rpm	1500/3000 rpm	Single winding
8-2	900/3600 rpm	750/3000 rpm	Two winding
8-4	900/1800 rpm	750/1500 rpm	Single winding

Other speeds available upon request.

Voltage and Frequency

NORD motors are available in a number of voltage and frequency options. All standard voltages are commonly available. Optional voltages may be provided, but may include an increase in price and an extended lead time. It also may be possible to provide motors with special voltages and frequency operation points.

Standard Voltages

Single speed motors	Two speed motors
230/460V-60Hz (up to 30 hp)	460V-60Hz
460V-60Hz (40 hp and larger)	230V-60Hz
575V-60Hz	575V-60Hz
400V-50Hz	400V-50Hz

Optional Voltages

Single speed motors	Two speed motors
208V-60Hz (up to 10 hp, not available in energy efficient design)	Other voltages & frequencies available upon request
380V-50Hz	
415V-50Hz	
380V-60Hz	
Other voltages & frequencies available upon request	

Voltage and Frequency Variation

Voltage and frequency variations are based upon the assumption that the nameplate horsepower will not be exceeded and that the motor temperature may increase. Standard allowable deviations are based upon the type of motor labeling.

NEMA and CSA Labeled Motors

Variations are based upon the nominal utilization voltage, and not the service (supply) voltage as per ANSI C84.1. Voltage and frequency tolerances follow the guidelines set forth in NEMA MG-1.

Service Voltages	Utilization Voltages
120V	115V
208V	200V
240V	230V
480V	460V
600V	575V

- Approved voltage variation at rated frequency is $\pm 10\%$.
- Approved frequency variations at rated voltage is $\pm 5\%$.
- Approved combined voltage/frequency variation = $\pm 5\%$.

US and Canadian Standard (CUS)

CUS motor construction defines that NORD motors are constructed in accordance to UL 1004 (electric motors) and CSA C22.2 No. 100-04 (motors and generators) guidelines. This option is standard for 208, 230, 460, and 575 Volt operation at 60 Hz.

Motors nameplated with the CUS option will be marked and indicating that the Underwriters Laboratories and CSA have tested and approved NORD motors according to both US and Canadian standards.

CE Labeled Motors

Per IEC 60038, allowable service voltage variations on in the current system, compared to the previous system, are as indicated.

Previous Service Voltages	Current Service Voltages
220V, 380V, 660V	230V, 400V, 690V +6/-10%
240V, 415V	230V, 400V +10/-6%

- Per EN 60034-1, a $\pm 5\%$ voltage variation and a $\pm 2\%$ frequency variation can be tolerated.
- The allowed variations are based upon the voltage (or voltage range) indicated on the motor nameplate.

Insulation Class

NORD motors are constructed with a thermal class F insulating system. These motors are also designed for a class B temperature rise of up to 80°C. The use of class F insulation with a class B temperature rise provides increased operating life. Motors constructed with class H insulation are also available as an option.

Ambient Temperature

NORD motors are designed to operate with a maximum ambient temperature of 40°C (104°F). If the motor's operating environment exceeds 40°C, the motor's nominal power P_n either needs to be de-rated (see table below) or use upgraded insulation.

Ambient temp [°F]	113	122	131	140
Ambient temp [°C]	45	50	55	60
De-rate factor	0.96	0.92	0.87	0.82

$$\text{Motor Rated Power} = [P_n \times \text{De-rate factor}]$$

Elevation

NORD motors are designed to operate at an elevation of up to 3300 ft (1000 m) above sea level. At higher elevations the air is thinner resulting in less cooling capacity. If the motor's nominal power (P_n) installation elevation exceeds 3300 ft (1000 m), the motor's nominal power either needs to be de-rated (see table below) or requires upgraded insulation.

Altitude [ft]	5000	6500	8200	10000	11500	13000
Altitude [m]	1500	2000	2500	3000	3500	4000
De-rate Factor	0.97	0.94	0.90	0.86	0.83	0.80

$$\text{Motor Rated Power} = [P_n \times \text{De-rate factor}]$$

Enclosure

The NORD standard motors are provided with Totally Enclosed Fan-Cooled (TEFC) with an IP55 enclosure rating. Other enclosures are available, including Totally Enclosed Non-Ventilated (TENV), Totally Enclosed Blower-Cooled (TEBC), and IP66.

The motor integral cooling fan provides proper air flow in either direction of rotation. The IEC cooling classification is IC 411 according to IEC 60034-6.

IP Enclosures per IEC 60034-5 - Simplified

1st digit Foreign body protection	2nd digit Water protection
0 No protection	0 No Protection
1 Protected against solid objects 50mm (2 in) in diameter and larger	1 Protected against dripping water
2 Protected against solid objects 12 mm (1/2 in) in diameter and larger	2 Protected against dripping water up to a 15 degree angle
3 Protected against solid objects 2.5 mm (0.1 in) in diameter and larger	3 Protection against sprayed water
4 Protected against solid objects 1 mm (0.04 in) in diameter and larger	4 Protection against splashed water
5 Protected against dust	5 Protection against water jets
6 Dust tight	6 Protection against high pressure water jets
7 --	7 Protection against intermittent submersion in water
8 --	8 Protection against continuous submersion in water

Duty Classes

The following duty types are defined in IEC 60034-1.

Duty Type	Explanation Excerpts
S1	Continuous operation at a constant load, the motor reaches thermal equilibrium
S2	Short-time operation at a constant load for a given time followed by a time of rest until the motor is completely cooled down to ambient temperature. Example: S2-10 minutes Recommended values for determination: 10, 30 min.
S3	Sequential intermittent operation, identical run and rest cycles with a constant load. Temperature equilibrium is never reached. Starting current has little effect on temperature rise. The cyclic duration factor (cdf) indicates the portion of operation time in relation to a complete duty cycle. The typical duty cycle time is 10 minutes, unless otherwise specified. Example: S3-40% Recommended values for determination: 25, 40, 60%
S6	Continuous operation with intermittent load sequential, identical cycles of running with constant load and running with no load. No rest periods. Example: S6-40% Recommended values for determination: 25, 40, 60%

Power Increasing Factor for Short-term & Intermittent Operation

Motor ratings in this catalog are based on continuous duty operation (S1). If a motor is designed for S1 duty, but is to be operated for short-time or intermittent operation it can be subjected to higher loads. The available motor power can be raised above the motor rated power by the "increasing factor" in the table below.

Duty Type			Increasing factor
S2	Operating time	10 min	1.40
		30 min	1.15
S3	Cyclic duration factor (cdf)	25%	1.33
		40%	1.18
		60%	1.08
S6	Cyclic duration factor (cdf)	25%	1.45
		40%	1.35
		60%	1.15

Motor Rated Power = $[P_n \times \text{Increasing factor}]$

Protective Features

All NORD Motors and Speed Reducers are constructed to provide a high degree of protection against wet and severe environments. NORD motors and speed reducers are sealed against moisture ingress and use corrosion and moisture resistant components. NORD has recently made many enhancements in the motor and gear units standard construction to provide improved environmental protection. Many of the standard protection features of the NORD units are only available at an additional cost from other motor and gear drive suppliers. NORD designs all gearmotors, speed reducers and motors for installation in harsh industrial, commercial and municipal installation environments.

Motors for Indoor Operation - Option Codes

	Dry Conditions	Wet or Humid Conditions

Motor Options & Construction

NORD motors are stocked in one of two ways. The first method is to stock a complete motor that is ready to be assembled to a gear reducer or shipped as a stand alone motor. The second method, the motor is assembled from component parts. The **Mod** next to a motor option designates that the option can be added to a complete motor by simple modification. The **Build** next to a motor option indicates that the motor will need to be built from component parts in order to incorporate the motor option.

General Options

Motor Protection

Selecting appropriate motor protection is a key factor in reliable motor operation. There are two common classes of motor protection; current based and temperature based. Electrical installation codes require at least two types of protection in the motor circuit, both of which are normally current based. First is short-circuit protection, normally accomplished by fuses or circuit breakers. The Second is "motor overload protection" and is normally

a device called a "motor overload" or a "heater." Current based protection is effective in some conditions. NORD can provide two different types of motor temperature based protection, a PTC thermistor (TF) or a bi-metallic thermostat (TW). Temperature based protection is more effective motor protection in many situations, this is explained in the table below.

↑ = Good protection ↔ = Limited protection ↓ = No protection	Fuses	Motor Overloads	PTC Thermistor (TF)	Bi-metallic Switch (TW)
Over current up to 200%	↓	↑	↑	↑
High inertia starting	↓	↔	↑	↔
Frequent motor starts	↓	↔	↑	↑
Stalling	↔	↔	↔	↔
Single phasing	↓	↔	↑	↑
Supply voltage deviations	↓	↑	↑	↑
Supply frequency deviations	↓	↑	↑	↑
Inadequate motor cooling	↓	↓	↑	↑
Bearing Damage	↓	↓	↑	↑

Thermostats (TW & 2TW)

Build

Motor thermostats or bi-metallic switches can be wired directly into the control circuit without a separate control module or tripping device. Thermostats operate on a relatively high control voltage so they are much less sensitive to voltage interference from the main power supply. One may often run thermostat leads and motor power leads next to each other when using the appropriate shielded cable. The installer is responsible for wiring the thermostats onto the motor control circuit. The leads may be labeled in a variety of ways as indicated.

Standard connection	Series connected, one per phase
Contact	NC (Normally Closed)/ Auto Re-setting
Response Temperature (Option TW)	311 °F (155 °C) Shut-Off Device
Response Temperature (Option 2TW)	311 °F (155 °C) Shut-Off Device + 266°F (130 °C) Alarm Device
Nominal Current	1.6 Amp at 250 V
Resistance	< 50 mΩ
Switch Rebound	< 1ms
Insulation Rating	2000 VAC
Cycles	10,000 max
Lead Identification (inside terminal box)	P1 and P2 or TB1 and TB2 / 2TB1 and 2TB2

Thermistors (TF)

Build

With a separate control module or tripping device (ex. Kirwan INT69) thermistors are used to sense overload and temperature conditions by converting the critical operating temperature limit into internal resistance changes. Due to their small size, heat sink construction, and high change in resistance value, minor resistance variations caused by relatively long lead runs may be tolerated. This feature also allows for one controller to be used for several temperature sensing locations. Many variable frequency drives come with on-board thermistor inputs. NORD does not supply the thermistor control module.

Standard Connection	Three devices, series connected, one per phase
Type	Positive temperature coefficient (PTC)
Transition Temperature	150°C±5 °C
Resistance	20... 500Ω (below transition) > 4 kΩ (above transition)
Reed Current	< 1mA
Max Voltage	30V
Lead Identification (inside terminal box)	P1 and P2 or TP1 and TP2

⚠ WARNING ⚠

- Thermostats and Thermistors will automatically reset.
- All wiring must be completed by qualified personal and adhere to all local installation codes.

Space Heater (SH)

Build

Motors subjected to extreme temperature fluctuations or severe climatic conditions can be damaged by the formation of condensation. NORD can provide anti-condensation space heaters inside the motor to heat up the windings when the motor is not operating. This will prevent moisture from forming inside the motor. The space heaters must not be switched on while the motor is running.

Space Heater Voltage Must be specified

Voltages available

- 115V – 50/60Hz
- 230V – 50/60Hz
- 460V – 50/60Hz
- other voltages available on request

Class H Insulation (ISO H)

Build

NORD motors can be manufactured with a class H insulation system. Standard NORD motors include double coated magnetic wire windings. When these windings are paired with a class H insulation it provides extra temperature capacity for the motor and will increase the motor's life. Class H insulation rated motors are also an advantage in some severe applications such as:

- Increased ambient temperature installations above 40°C (104°F)
- Increased elevation installations – above 3300 ft (1000 m)
- Applications with a high number of starts per hour.
- A lower operating frequency such as when used with an AC vector drive
- For additional information on insulation class see page 219.

High Resistance Rotor (WU)

Build

Using Silumin rotor material, NORD offers a high resistance rotor to soften the motors operation and allow higher overload torques.

Single Phase Motors, 60Hz (ECR)

Build

The ECR series of single phase motors is intended for demanding operation at 60Hz with a supply voltage of 115V or 230V. The permissible voltage range is 115/230V +/- 10%. The ECR motors have a 1.15 service factor and are available from 0.16 - 2 hp.

Paint Coatings Mod

NORD's standard paint coating is a two component, aliphatic polyurethane finish containing 316 stainless steel material. This gray stainless steel paint has excellent appearance and outstanding physical properties. It is suitable for both indoor and outdoor applications. For more information and an explanation of all of our paint options please see page 34.

Condensation Drain Holes

NORD motors can be equipped with condensation drain holes. These drain holes are placed in the motor endbell at the lowest possible point. The drain holes are closed at the factory with plastic snap in plugs. They allow for condensation accumulation in the motor to drain after the closing plugs are removed.

The motor drain holes can be provided by NORD either open (KBO) or sealed with a closing plug (KB).

IMPORTANT NOTE

The motor must be installed in the mounting orientation specified on the nameplate or the drain holes will not function properly and may result with the motor filling with water.

Condensation Drain Holes, Plugged (KB) Build

KB drain holes are plugged for shipment. In order for the holes to effectively drain moisture, the plugs must be removed before using the motor.

Condensation Drain Holes, Open (KBO) Build

KBO drain holes are shipped open (not plugged).

IP65 Enclosure Protection Mod

NORD motors can be provided with an IP65 enclosure protection. IP65 protection is suitable for wet, low-pressure wash down and extremely dusty environments.

IP	1 st digit Foreign body protection	IP	2 nd digit Water protection
6	Dust tight	5	Protection against water jets

IP66 Enclosure Protection Mod

NORD motors can be provided with an IP66 enclosure protection. IP66 protection is suitable for wet, high-pressure wash down and extremely dusty environments, and includes all requirements included in IP65 enclosure protection.

IP	1 st digit Foreign body protection	IP	2 nd digit Water protection
6	Dust tight	6	Protection against high pressure water jets

Terminal Box Sealed with Resin (KKV) Mod

Terminal boxes may be sealed with a flexible, electrically safe resin to ensure that contaminants, water, and moisture cannot pass through the terminal box into the stator body. This option is helpful in extremely dusty, wet and humid environments. Another environment where this option is helpful is in installations that have frequent large temperature swings where condensation may form.

Additional Insulation (AICM) Build

NORD can provide additional insulation inside the motor to provide additional electrical protection in extremely wet or corrosive environments. An electrically safe insulating material is coated internally in the stator windings and on the rotor body.

Epoxy Dipped Windings (EP) Build

In extremely wet environments, the motor windings are dipped in epoxy for improved moisture protection. The motor can also be treated with the standard NORD Severe Duty + (NSD+) package for an even higher degree of protection.

Canopy Drip Cover (RD) Mod

For wet or dirty installations where the fan end of the motor is mounted up, NORD offers a canopy drip cover to block this falling water or debris, thus forcing water or debris to repel from the motor's fan guard, .

Double Fan Cover (RDD) Mod

For wet or dirty installations where the fan end of the motor is mounted up, the NORD Double Fan Cover provides protection against falling or wind blown water, snow, dirt or debris from entering the back of the motor.

Blower Cooling Fan (F & FC)

Mod

NORD offers continuous running motor mounted cooling fans that provide motor cooling at low motor speeds. When a motor is operated on an AC vector drive at low frequency, standard rotor fans do not provide adequate airflow for cooling. NORD's separate powered motor cooling fans provide that necessary airflow. These separately powered fans replace the standard motor fan and its cover.

Blower Cooling Fan

Option F – 3ph & 1ph 220-575V 50/60Hz

Motor Frame	60Hz Ratings			50Hz Ratings

Additional Options

Totally Enclosed Non-Ventilated (OL) Mod

NORD can provide totally enclosed non-ventilated (TENV) motor enclosure. TENV motors provide benefits in certain operating environments; such as extremely dusty or dirty applications, where cooling fans may have material accumulation, which can be detrimental to the motor and the application. The OL series of motors are the standard fan cooled motor construction including the fan cover, but provided without the fan. TENV motors can also be used to reduce cooling fan noise on a standard motor.

A TENV motor's frame size is larger than a totally enclosed fan cooled (TEFC) motor. For intermittent operation, a TENV motor can be operated at a 50% duty cycle at full rated power.

Totally Enclosed Non-Ventilated, without Fan Cover (OL/H) Build

The OL/H series of TENV motors are more compact in space than the OL series. They do not include the rotor shaft extension through the back bearing end bell or the fan cover.

2nd Shaft Extension on Fan Side (WE) Build

NORD can provide a second shaft extension on the fan side of the motor that protrudes through the fan cover. This extension can be used as a power take-off or to mount customer supplied devices such as encoders and tachometers.

The shaft extension can be provided on motors with and without brakes. The shaft extension can not be used on motors with blower fans (F) or (FC). For dimensions see pages 260 - 266.

Hand Wheel (HR) Build

Motors can be supplied with a hand wheel that is located on the second shaft extension. The hand wheel can be used for manual operation during power outages, or for machine positioning setup. This option is not available on NEMA dimensioned motors. For dimensions see pages 260 - 266.

WARNING

The customer is required to provide appropriate safety guarding for the rotating hand wheel.

High Inertia Cast Iron Fan (Z)

Build

An optional cast iron motor cooling fan is available. This fan is used as a mechanical soft start and/or soft stop. This fan adds inertia to the motor. The high inertia fan can also be used for a flywheel effect to store mechanical energy. This can be helpful in smoothing rapid load changes. The cast iron fan replaces the standard plastic motor fan. The motor length is the same as a brakemotor.

Motor Frame	Fan Inertia J_z [lb-ft ²]
71	0.0475
80	0.1140
90	0.2375
100	0.2684
112	0.5653

Motor Backstop (RLS)

Build

NORD can provide backstops on many motor frames. A backstop will prevent the motor from rotating in one direction. A common use is to prevent a motor from allowing a load to move backwards when power is removed. A motor brake is an alternative that may be used for this same purpose. A backstop adds additional length to the motor. For the motor length extension, see the table below.

The allowable direction of rotation must be specified in the order.

Allowable Shaft Rotation

- Clockwise - Back of Motor
- Counter Clockwise - Back of Motor

Motor Size	Backstop Torque [lb-in]	Minimum Speed [rpm]	Motor Extension [in]
80S/L	1150	860	2.52
90S/L	1150	860	2.95
100L	1150	860	3.58
112M	3270	750	3.66

250M	22130	400	9.84
280S/M	51330	320	11.02

For all motor dimensions please see pages 260 - 266.

Additional Options

Quick Power Plug Connector (MS) Mod

The quick power plug connector (MS) is a simple and fast way to connect and disconnect a motor or brake motor. The MS connector is available on NORD three-phase motors from frame size 63 to 132. The motor connections are made by a modular power plug manufacturer by Harting. After the first installation, the motor can be quickly changed by simply plugging and unplugging the electrical connections. This will ensure the new motor is properly wired. This is a significant advantage to equipment builders who fabricate machinery on site and then ship to another location. The motor with the MS connector can simply be plugged in during final installation.

NORD supplies the male connector half mounted on the motor conduit box. The customer must supply the female connector half mounted on the power wiring. NORD supplies a protective plastic cover on the motor male connector half to protect from dirt and damage prior to installation.

Advantages:

- Simple motor wiring
- Accurate wiring of motor at final job site
- Fast motor replacement
- Accurate wiring of replacement motor
- Ideal for portable equipment
- Reduces the required personnel for motor replacement
- Faster motor changes reduce down time

Plug ratings:

Manufacturer	Harting	
Connector	HAN 10 ES/HAN 10ESS	HAN 10 C-Modular
	Cage Clamp Connectors	
Number of Pins	10-Male	9-Male
Voltage	600VAC per UL/CSA	690VAC per UL/CSA
Current	16A - Continuous	40A - Continuous

Quick Power Plug Kits:

Small Terminal Box (EKK) Mod

The motor terminal box can be provided as a smaller, one-piece terminal design. This option is valid for standard motors 0.16 - 10 hp (frame size 63-132) and is not available for Brakemotors.

EKK Dimensions

Motor Frame	g1	n	p	S3

Encoder Overview

In many of today's drive applications encoders are needed when it necessary to monitor travel distance, position, or speed. Encoders use integrated electronics to convert sensor detected signals into a digital output format that is easily interfaced with programmable logic controllers (PLC's) and computers.

NORD offers a variety of encoder solutions that will satisfy almost any application. NORD will also work closely with our customers to satisfy many specific encoder requirements or meet specifications for a variety of protocols.

Incremental Encoders

Incremental encoders can be used to monitor position or speed. Position is determined by counting pulses from a zero mark or home position. Speed or velocity data is generated by looking at the time interval between pulses or the number of pulses within a given time period

With incremental encoders it is necessary to re-initialize the system and return the system to the home position in the event of a power loss.

The following pages are an explanation of the types of incremental encoders that NORD offers.

Magnetic Encoders vs. Optical Encoders

Magnetic Encoders use a magnetized wheel spinning in relationship to a fixed magneto-resistive sensor. The wheel causes predictable responses in the sensor, based on the strength of the magnetic field.

Optical Encoders use a spinning disk and a mask. The mask lets light pass through in predictable patterns for interpretation by a photo-electric sensor. In both cases the sensor produces a digital output format that is easily interfaced by the PLC or computer.

- Magnetic Incremental Encoder (Page 230)
- Optical Incremental Encoders (Page 231).

Types of Common Pulse Signals

Incremental encoders can provide different pulse signals for each full rotation of the encoder.

Quadrature pulse signals are represented by two encoder output signals (A & B channel) phased 90° electrically apart; these signals help determine direction of rotation by monitoring the phase relationship between the two channels.

Differential signals are complimentary or mirror image [high (A & B) and low (A & B)] output signals that are generated in order to greatly reduce the encoder's susceptibility to electrical interference or noise. When noise occurs during a given pulse, a mirror image does not result and that small portion of the total signal can be ignored.

A Marker Pulse or Index signal (Z channel) can be provided as one pulse per revolution signal for pulse count verification on the A and/or B channels. This pulse is sometimes used for error detection or re-homing the system after a power failure or fault condition.

Absolute Encoders

Absolute encoders use a disc system with digital coding on concentric tracks. A unique pattern is assigned to every position. True position verification and reference to home is maintained offering optimal recovery from system and/or power failures. Absolute encoder's also come in a variety of output protocols or interfaces. Additional incremental tracks are often specified to provide speed control along with accurate position monitoring.

- Absolute Encoders (Page 232).
- Absolute Encoders for NORD Vector Drives (Page 233).

Magnetic-Incremental Encoder (MG)

NORD offers a competitively priced magnetic encoder that is easily adaptable to the 63 to 180 frame NORD motors. The magnetic encoder utilizes a special screw installed to the motor's rotor shaft in order to create a permanent rotating magnetic field.

A small 0.78 inch (20 mm) sensor pick-up is mounted to the back of the motor fan shroud. The sensor converts the changing magnetic fields into HTL, push-pull output signals that can be read by a PLC or computer. Quadrature (2 channels, A and B) output signals are phased electrically apart by 90° in order to help determine the direction of rotation by monitoring the phase relationship between the two channels. Our design enables the encoder's implementation near the vicinity of our electric brakes.

Advantages

- Cost effective, compact, and easy to mount (63– 180 frame motors).
- Minimal dimensional change to back of motor (page 192).
- Non-contacting measuring method using magnetics.
- Accurate resolution, vibration and shock resistancy in order to increase durability.

Technical Data	
Interface	HTL (push-pull) / Quadrature
Supply Voltage	10-30 VDC
Current	40 mA Max / < 30 mA (no load)
Pulse Count	1 PPR, 32 PPR or 512 PPR
Speed Range	0-5000 rpm
Protection Class	IP 68

3	Blue	3	Orange	Channel B
4	Black	4	Black	(-) Supply Voltage

Ordering Example

Encoder Type: MG - Pulse Count - Option

A Magnetic HTL encoder, with a 256 pulse count that is connected by a M12 connector

Optical-Incremental Encoder (IG..P) Build

NORD offers optical incremental encoders to monitor position or speed. These encoders are typically mounted to the back side of the electric motor shaft. Common interface logic types include: TTL, HTL and Line Driver. NORD will also work closely with our customers to provide specified encoder pulse counts or control logic.

Optical incremental encoders pass light from a light emitting diode (LED) through a partially masked rotating code disc onto a photo-electric receiver. The receiver converts light pulse signals into a square wave digital output format that is easily interfaced by programmable logic controllers (PLC's) and computers.

With optical incremental encoders it is necessary to re-initialize the system and return the system to the home position in the event of power loss.

Advantages

- Quadrature, differential and marker pulse output signals
- Accurate resolution up to 5000 ppr.
- Sturdy double bearing design offers high tolerance to shock and vibration.
- Short-circuit proof outputs and reverse connection protection.
- M12 (8-pin) male plug fixed to motor fan cover for easy wiring and adaptability.

- The above encoder cables are provided with the shielding NOT connected thru the plug nut
- Providing a conducting path thru the cable nut and attaching the shield to ground on both ends of the cable is a possible source of electrical noise

Absolute Encoder (AG)

Absolute encoders do not lose position or home-position reference when power is removed. Absolute encoders provide a higher degree of safety than when using incremental encoders in applications where a loss of position could result in damage to the machinery or injury to the operator.

NORD absolute encoders are available with different data protocols or interfaces and many cases they can also be supplied with optional incremental tracks to provide accurate position and speed sensing feedback. We will also work closely with our customers to meet the specifications of the equipment builder or systems integrator.

NORD typically provides multi-turn absolute encoders mounted to the back side of the electric motor shaft. Multi-turn encoders provide turns counting in applications involving more than one revolution of the encoder shaft. Single-turn encoders can also be supplied and they are best suited for short travel, motion control applications where position verification is required within a single turn of the encoder shaft.

Absolute Encoder (AG) - For AC Vector Drives

Many NORD AC variable frequency drives have an on-board CANopen® interface allowing the user to implement vector-drive position control.

The encoders listed in the table below communicate using CANopen® profile DS406 V3.2; device specific add-ons allow parameterization of the absolute encoder directly from the NORD frequency inverter.

The table indicates which encoder options contain incremental tracks so that speed control can also be monitored, which is necessary when speed control is required in addition to positive control.

Consult the appropriate NORD user manuals for frequency drive and encoder wiring. Also consult the encoder manufacturer's documentation for the encoder terminal assignments.

Energy Efficiency Global Regulation

United States

The United States has implemented amended motor efficiency regulations. This process started with the "Public Law 110-140", which had been passed through legislation on December 19, 2007, and is called the "Energy Independence and Security Act" (EISA). This legislation in most cases replaces the existing law that governed motor efficiency in the USA (Energy Policy Act or EAct). In general, EISA increases the efficiency requirements for many motors. EISA includes a "Premium Efficiency" motor class in addition to the two existing efficiency classes of motors that had been utilized. This law took effect on December 19, 2010 whereas all motors produced after that date must meet EISA requirements. Motors that had been in stock at that time are exempt and still may be sold.

The EISA law also expanded the scope of motors required to meet efficiency levels. The following classes of motors were not included in EAct but now must meet efficiency requirements per EISA:

Motor Types Covered in the EISA Efficiency Requirements
U-frame motors
NEMA electrical design C motors
Closed coupled pump motors
Footless motors
Vertical solid shaft thrust motors
8-pole motors
Voltages other than 230 or 460
201-500 hp motors

In this law, the US Department of Energy (DOE) has been responsible for writing the new regulation requirements. These regulations clarify how the law has been implemented and provide an increased level of detail in terms of specifics. The regulations are included in the Federal Register / Volume 74, NO. 54 / Monday, March 23, 2009 – Part 431. The regulations also indicate what style of motors must conform to each efficiency level explained.

Motor Classes Covered by EISA Efficiency Requirements
General Purpose Motors per NEMA MG1
1-500hp
2, 4, 6 & 8 pole
600V and below, 3-phase, 60Hz
NEMA Designs A, B, C & equivalent IEC equivalents
TEFC – Totally Enclosed Fan Cooled
ODP – Open Drip Proof
XP – Explosion Proof (ATEX)
Increased enclosure protections (Examples include Washdown, Severe duty,...)
NEMA Frames 140 and larger
IEC Frames 90 & Larger
NEMA T-frame (and U-frame) & IEC equivalents

Any of the following are exemptions from the EISA requirements:

Motor Classes not Covered by EISA Efficiency Requirements
Definite or Special Purpose per NEMA MG1
Integral gearmotor motors
Less than 1 hp
Multi-speed motors
Single-phase motors
DC Motors
NEMA Design D high slip
NEMA 56 or smaller frame
IEC 80 or smaller frame
50Hz motors
Intermittent duty motors (S2 or S3)
TENV – Totally Enclosed Non-Ventilated
TEAO – Totally Enclosed Air-Over
(TEBC – Totally Enclosed Blower Cooled)
Integrated AC drive (SK200E or SK300E combined with motor)

Efficiency Requirements for Motors

According to EISA, when motors have a mandated efficiency requirement they are categorized into two classes, Subtype I and Subtype II. In general, motors that needed to be energy efficient per EPA standards now must be premium efficient, Subtype I.

Motors that did not have a required efficiency per EPA but now require an efficiency level in EISA are included in Subtype II (energy efficient). The following is a more detailed list of motors included in each efficiency category.

Premium efficiency [Subtype I] – must match all of the following criteria
IEC or NEMA footed or foot+flange
1-200hp
Poles 2,4,6
230/460V-60Hz
Motor or brakemotor
NEMA 140 frame& larger or IEC 90 frame & larger
NEMA Design A or B

Energy efficiency [Subtype II] - Meets the premium efficiency guidelines except:
Footless IEC or NEMA Flange (NEMA-C or IEC B5 or B14)
Other 60Hz voltages (like 208V and 575V)
8 pole
201-500hp
NEMA Design C
U-Frame

Canada

Three-phase electric induction motors are included in the products governed under Canada's Energy Efficiency Regulations (the Regulations). Natural Resources Canada (NRCan) proposes to amend the Regulations in order to

- Enforce more stringent Minimum Energy Performance Standards (MEPS) on suppliers for electric motors, imported or shipped inter-provincially for sale or lease in Canada, and
- Expand the scope to include motors which were previously excluded from the Regulations.

The updated Regulations for motors sold in Canada contains three elements:

- Increase the motor efficiency requirements for 1 to 200 HP (0.75 to 150 kW) class motors to include premium efficiency levels.
- Eliminate most of the current exclusions for 1 to 200 HP(0.75 to 150 kW) motors so that they will be required to meet the current efficiency levels.
- Extend coverage to include 201 to 500 HP (151 kW to 185 kW) motors, which were previously excluded, to the current efficiency level standards.

Standard Efficient Motors

A standard efficiency motor is defined as a rotating machine rated for continuous duty operation that converts electrical power into mechanical power and:

- is an electric induction motor with a polyphase, squirrel cage type design,
- has a minimum output rating of 1 HP (0.746 kW) and up to and including 500 HP (375 kW),
- has a rated voltage of not more than 600 volts AC.
- has a rated frequency of 50/60 Hz or 60 Hz,
- is open or enclosed construction and includes explosion-proof enclosures,
- is constructed to NEMA T frame/U frame dimensions or the IEC equivalent dimensions,
- is NEMA design A, B or C, or IEC design N or H,
- is designed to operate at a single speed,
- has 2, 4, 6 or 8 pole construction,
- is of foot mounted construction or flange mounted construction with or without feet or detachable feet.
- has an IP code from 00 to 66

Premium efficient motors

A premium efficiency motor, is defined in the description above, and includes all of the additional classifications:

- rated size of 1 HP \geq 200 HP or IEC design motor of size greater than 0.746 kW \geq 150 kW, and
- 2, 4, or 6 poles, and
- NEMA T frame or IEC frame designation of 90 or above, and
- NEMA design A or B, or IEC design N, and
- standard NEMA shaft, R-shaft or S-shaft or an IEC equivalent.

Energy efficient motors

a motor, as defined in the premium efficiency category, with any of the following classifications, including integral gearmotors:

- 8-pole construction, or
- U frame or equivalent IEC dimensions, or
- NEMA design C or IEC design H, or
- close-coupled pump motor, or
- fire pump duty motor, or
- vertically-mounted solid shaft thrust motor, as tested in the horizontal configuration, or
- footless construction, or
- 2, 4, or 6-pole, NEMA design B motor of size greater than 200 HP and up to and including 500 HP or IEC design N motor of size greater than 150 kW and up to and including 375 kW.

European Union

New efficiency classes IE1, IE2, IE3 The new standard IEC 60034-30:2008 replaces the various national systems. At the same time, with the IEC 60034-2-1:2007 standard, a new procedure for the measurement of efficiency has been introduced which also contributes to international cohesiveness.

Efficiency Levels

As of June 16 2011, only motors of efficiency class IE2 or better may be used for continuous operation of standard motors with 1hp (0.75 kW) and more in the EU. The basis for this is ErP 2009/125/EC VO640-2009.

Efficiency Level (Europe - New) IEC600034-30	Efficiency Level (Europe - Old) CEMEP
IE3	New
IE2	EFF1
IE1	EFF2

Motors included in the efficiency requirements

- Single speed, three-phase induction motors 50 Hz or 50/60 Hz
- 2, 4 and 6 poles
- Rated voltage up to 1000 V
- Rated power between 0.75 kW and 375 kW
- Continuous duty operation S1 or S3 with cyclic duration factor of 80% or higher

Effective dates:

- June 16, 2011, motors shall not be less efficient than the IE2 efficiencies
- January 1, 2015 motors with a rated output of 7.5-375 kW shall not be less efficient than the IE3 or should meet the IE2 efficiency and be used with an AC drive;
- January 1, 2017 all motors with a rated output of 0.75-375 kW shall not be less efficient than the IE3 or meet IE2 standards and be used in conjunction with an AC speed drive.

Exceptions

- Submersible motors;
- Motors completely integrated in a product (gear, pump, fan or compressor,...) where the energy performance cannot be tested separate from the product
- Motors specifically designed to operate:
 - o At altitudes exceeding 1000 meters elevation;
 - o Where ambient temperature is above 40 °C;
 - o In max. operating temperature above 400 °C;
 - o Where ambient temperatures are less than -15 °C or less than 0 °C for an air cooled motors;
 - o Water cooled motors with cooling water below 5 °C or exceeding 25 °C;
 - o In explosive atmospheres per Directive 94/9/EC
- Brake motors.

Motor Brake (Option BRE)

The standard NORD motor brake is spring-set when power is removed from the BRE circuit (power-off). The brake coil utilizes a DC voltage supplied through a rectified power source.

Advantages

- Each NORD motor frame size has a number of brake sizes available, with different torque capacities.
- Brake torque adjustments are possible by changing the brake spring combinations. In addition, brake sizes from 5-40 Nm (3.7-30 lb-ft) are typically supplied with an additional spanner-nut adjustment on the back of the brake.
- NORD brakes provide a high degree of safety because when power is removed the brake will automatically set to hold the load.
- The brake rotor or brake disc is environmentally safe and asbestos-free.
- The connection between the rectifier and the brake coil is completed at the factory and the brake air-gap is factory-set but can be adjusted in the event of wear.

Basic Brake Operation

The standard NORD motor brake is “spring set”. When power is removed and the brake is de-energized (power-off), the brake springs exert a force against the armature plate in turn preventing the brake rotor (or brake disc) from rotating. When the brake coil is energized (power-on), a magnetic field pulls the armature plate across the air gap to the brake casing, which releases the brake rotor and allows the motor shaft to rotate.

NORD brakes are DC voltage brakes and in most instances are supplied with a motor mounted brake rectifier for easy connections to AC power. AC power is taken directly from the power line or from the terminal block of the motor and converted to DC by the supplied rectifier.

Brake Selection

The selection of a motor brake system is broken down into five phases. The selection of the braking torque, the selection of the braking times (release times and setting times), the selection of the electrical supply and connection, the selection of brake options, and the final phase is the verification of the permissible brake work.

Each NORD motor may be supplied with a number of brake torque sizes. Each brake may be adjusted to different brake torque values. (pages 271 - 272)

Selection steps

- 1) Brake torque selection (page 271)
- 2) Brake times & electrical selection (page 273)
- 3) Electrical supply and connection (page 274 & 295-305)
- 4) Brake options (page 277)
- 5) Brake work verification (page 294)

IMPORTANT NOTE

If the motor is connected to a frequency inverter, soft start, or is a two-speed motor, the AC power must be supplied separately to the brake rectifier.

Brake Torque Selection

Each NORD motor size has a number of brake torque sizes available. The BRE value in the table below is the standard brake torque size for each motor.

Example for ordering: SK 32 - S/4 **BRE10**

(**BRE 10** indicates a brake torque size of 10 Nm)

General Selection Considerations

NORD relies on the equipment builder to specify appropriate brake sizing for their application, while giving consideration to the following:

- For most applications, we advise sizing the brake to 1.5 - 2 times the motor rated torque.
- For vertical applications, it may be advisable to size the brake size up to 3 times the motor rated torque.
- For some applications, it may be necessary to specify a reduced brake torque setting to prevent excessive peak load conditions developed at the reducer output.
- On travel drive applications, excessive brake torque may lead to wheel skid; in addition on crane applications excess hoist-cable swing can result.

Motor Size & Efficiency				Brake Size and Torque					
Frame Size	SE	EE	PE		BRE5	BRE10	BRE20	BRE40	BRE60

* IP66 brake not possible

Manual brake release option not possible

Std - Standard Offering

Opt - Optional Offering

CAUTIONS

- Brake torque** - The brake torque is measured with a mean friction radius of the brake pad surface with a circumferential speed of 1m/sec (197 fpm).
- Brake torque tolerance** - For different applications and operating conditions, brake torque can vary from +40/-20% compared to the rated brake torque.
- Hoisting (lifting/lowering) applications** - must have the brake wired for fast response (DC-switching)
- Initial operation & wear-in period** - In new condition, the brake will have a reduced torque of up to 30%. In order to achieve full rated brake torque, a short run-in period is required. The run in time will vary depending on system loads.
- The brake rotor or brake pad** - must be protected against foreign matter, oil and grease. Contaminants of this type can greatly influence wear and reduce breaking torque.

Brake Torque Adjustment

Brake torque adjustments are possible by changing the brake spring combinations or by removing springs.

Brake Torque Reduction - Spring Removal

"Brake Size"	7 Springs		5 Springs		3 Springs	
	[Nm]	[lb-ft]	[Nm]	[lb-ft]	[Nm]	[lb-ft]
BRE 5	5	3.7	3.5	2.6	2	1.5
BRE10	10	7.4	7	5.2	4	3.0
BRE20	20	14.8	14	10.3	8	5.9
BRE40	40	29.5	28	20.7	17	12.5
BRE60	60	44.3	43	31.7	26	19.2

When adjusting the brake torque, start by removing the outer springs at opposite corners to prevent uneven brake wear.

On brake sizes 5-150 Nm (3.7-111 lb-ft) full brake torque is achieved with all (7) springs. The brake springs are placed in such a manner where there are (3) inner and (4) outer springs.

Spanner Nut Adjustment

"Brake Size"	Torque Reduction*		Max. Turns	Minimum Torque*	
	[Nm]	[lb-ft]		[Nm]	[lb-ft]
BRE 5	0.2	0.15	6	0.8	0.59
BRE10	0.2	0.15	12	1.6	1.18
BRE20	0.3	0.22	12	4.4	3.25
BRE40	1	0.74	9	8.0	5.90

- * With the minimum number of springs and maximum number of turns to the spanner nut.
- * Per each turn of the spanner nut

In addition, brake sizes from 5-40 Nm (3.7-30 lb-ft) are typically supplied with a threaded adjustment nut or spanner nut. Additional fine torque adjustment can be made by unscrewing the spanner nut a number of turns or "clicks" with a spanner wrench.

Brake Times & Electrical Selection

Brake timing performance is critical in selecting the optimal brake system. NORD brakes can provide exceptional performance in terms of the release (start) times and engagement (stop) times. Use the following guidelines in order to select the correct brake control components and connections.

- 1) Determine if the brake needs to be wired directly from the motor terminal block or powered by a separate source.
 - If you are using a frequency inverter, soft-start or a two speed motor you will need to supply the rectifier from.
 - If the motor is powered direct across-the-line the rectifier power can be supplied from the motor's terminal block.
- 2) What type of performance do I need?
 - Is the standard brake performance OK?
 - Is a higher performance required for fast brake release or very fast brake stopping?
- 3) Determine the brake supply voltage and check the rectifier compatibility table on 274

Selection Suggestions

When Fast or Very Fast Stopping is Recommended

Any applications that require quick stops and positive action at stand-still.

Recommended Applications

- conveyors and inclined conveyors
- hoists and lifts
- bulk material handling equipment (bucket elevators, idler conveyor's).

	CAUTIONS	
<ul style="list-style-type: none"> • Hoisting (lifting/lowering) applications - must have the brake wired for fast response. 		

When Fast-Release is Recommended (Overexcitation)

Any application that is very high-cycling with frequent starts and stops. These applications require the brake to release very-quickly in order to avoid excessive heat build-up in the AC motor and brake coil.

Recommended Applications

- Index conveyors
- Diverters
- Storage and retrieval crane systems

Power Source	Brake Release (start)	Brake engagement (stop)	Braking Method *	Rectifier
Motor Terminal Block	Standard	Standard (AC switching)	10	GVE/GHE/GUE
	Standard	Fast (DC switching)	15	GVE/GHE/GUE
	Standard	Very Fast (Reduced power holding)	40	GPE/PMG
	Fast (Overexcitation)	Standard (AC switching)	30	GPE/PMG
	Fast (Overexcitation)	Fast (DC switching)	35	GPE/PMG
Separate Power Source	Standard	Standard (AC switching)	20	GVE/GHE/GUE
	Standard	Fast (DC switching)	25	GVE/GHE/GUE
	Standard	Very Fast (Reduced power holding)	55	GPU/PMG
	Fast (Overexcitation)	Standard (AC switching)	45	GPU/PMG
	Fast (Overexcitation)	Fast (DC switching)	50	GPU/PMG

Rectifier Styles

GV - Full Wave Rectifier (Bridge)

GH - Half Wave Rectifier

GU - Combo Rectifier, Can be connected full or half wave

GPE - Hybrid Rectifier, Full wave then switches to half wave.

PMG - Hybrid Rectifier, Full wave then switches to half wave.

GPU - Hybrid Rectifier, Full wave, then switches to half wave. Has integrated DC Switching via voltage sensing.

Brake Options

Abbreviation	Description	Page
ADJ	Torque Adjustment - Brake torque may be adjusted at the factory	272
DBR	Double Brake (2xBRE) - Double brakes are used for redundancy and additional safety	280
FBR	Brass Foil - Provides a brass foil in the brake air-gap to provide faster braking times	278
FHL	Locking Hand Release Lever - Lockable manual hand release lever	277
HL	Hand Release Lever - Manual hand release lever	277
HLH	Hand Release Lever with Hole - Hand lever with 5.5mm hole	277
IP66	IP66 Brake Enclosure - Brake with IP66 enclosure	277
IR	Current Sensing Relay - Fast brake engagement (stopping) without external control equipment	279
MIK	Micro-Switch - Brake fitted with a micro-switch for sensing the brake state (released or engaged)	278
NRB1	Quiet Brake Release - An o-ring is placed between the coil body and the armature plate for noise reduction	278
NRB2	Quiet Brake Motor Operation - An o-ring is placed between the carrier hub & the armature plate to prevent clattering.	278
RG	Corrosion Protected Brake - Corrosion protected brake	277
SR	Dust & Corrosion Protected Brake - Dust & corrosion protected brake	277

Rectifier Options

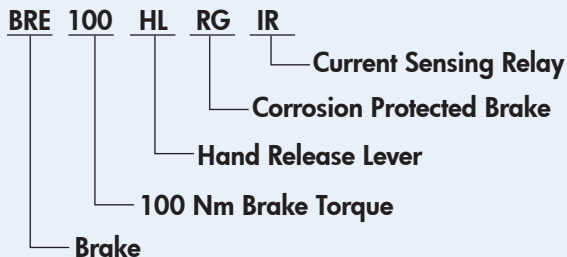

Abbreviation	Description	Page
Rectifiers	Most NORD brakes are provided with a rectifier that converts AC voltage to DC voltage. Rectifiers are used because most motors are AC powered, but brakes require DC power.	281
G...V	Sealed Rectifier - Rectifiers sealed with an electrically safe resin	281
GP...	High Performance Rectifier - Improves brake release and stopping times	281
GU...	Dual Rectifier - Full/Half-Wave	281
PMG	High Performance Rectifier - Improves brake release & stopping times - High current capacity	290

BRAKES

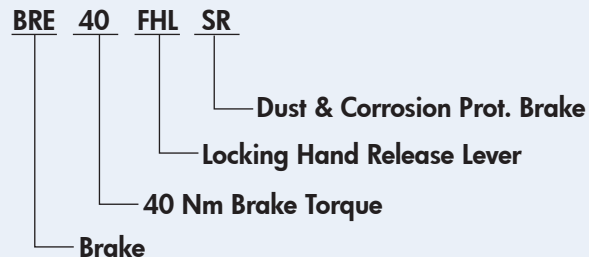

Brake Nomenclature

Ordering Examples

Brake, 100 Nm with a hand release lever, corrosion protected brake, and a current sensing relay.

Brake, 40 Nm with a locking hand release lever and dust & corrosion protected brake.

Hand Release Lever (HL)

Mod

The hand release option allows the brake to be manually released without requiring that the brake be energized with voltage. The lever has a spring return that allows the brake to be hand released and returned automatically to its set position. The hand release lever can be unscrewed for easy removal.

Locking Hand Release Lever (FHL)

Mod

This option allows the brake to be manually released and locked off without requiring voltage to the brake. The lock mechanism prevents the spring from returning the brake to a closed state without manual action by the user. The hand release lever can be unscrewed for easy removal.

Hand Release Lever With Hole (HLH)

Build

The hand release levers can be provided with a 5.5mm through hole. The hole can be used for attaching external pulling devices such as a cord to release the brake at a distance. This option is available for brake sizes BRE5 to BRE60.

? Hand Release Lever Location Required for HL, FHL and HLH

<input type="radio"/>	Position 1
<input type="radio"/>	Position 2
<input type="radio"/>	Position 3
<input type="radio"/>	Position 4

Corrosion Protected Brake (RG)

Build

The brake is fitted with a stainless steel brake plate to provide additional corrosion protection in severe and wet environments.

Dust & Corrosion Protected Brake (SR)

Build

A rubber-sealing boot is installed on the brake to provide additional protection in dusty environments. This feature includes the stainless steel brake plate (RG).

IP66 Brake Enclosure (IP66)

Build

A sealed brake with IP66 enclosure protection can also be provided. This brake has a different mechanical housing that provides a higher degree of protection against severe environments.

Brake Heating

Build

Brakes can be provided with a number of different heating systems. Contact NORD to discuss the details of your application

Quiet Brake Release (NRB1)

Build

To reduce the noise of the brake release, an o-ring can be placed between the brake coil body and the armature plate (stationary disc). The o-ring dampens the impact caused by the armature plate hitting the brake coil body during the release process. When ordering NRB1, the SR (Dust Boot) option is required. The SR option also includes the RG stainless steel corrosion plate.

Quiet Brake Motor Operation (NRB2)

Build

Noise due to vibration in the brake components is possible during motor operation particularly with variable frequency drive or single phase motor operation. To reduce this vibration the brake can be constructed with an o-ring between the brake carrier hub and the brake disc. This o-ring will prevent the clattering caused by the rapid micro speed changes in the motor caused by inverter or single phase operation.

Micro Switch (MIK)

Build

The micro switch monitors the release state of the brake and can be wired into external control circuitry to provide additional safety. The switch can also be used to detect certain brake service problems including excessive brake wear.

Brass Foil (FBR)

Build

NORD brakes can be fitted with a brass foil in between the armature plate and the brake coil body. The foil acts as a magnetic resistance to weaken the brake coil's magnetic attraction to the armature plate. The weaker magnetic attraction between the armature plate and the brake coil will provide faster brake reaction (stopping) times. The brake release (start) times will be increased. The brass foil is normally used in combination with the fast GP rectifiers in over excitation mode.

Current Sensing Relay (IR)

Mod

The current sensing relay, is used to achieve a fast brake engagement (stopping) without the use of external control equipment or additional wiring. The relay is mounted directly on the conduit box, and is powered from the motor's terminal block. The power leads for the relay replace one of the brass jumper bars on the terminal block of any single speed motor. The switch leads are connected to terminals 3 and 4 of the rectifier. When the power to the motor is shut off, the IR relay opens the brake circuit on the DC side which allows the brake to de-magnetize quickly.

CAUTIONS	
Current Sensing Relay Requirements	
<ul style="list-style-type: none"> ■ Brake must be powered from the motor's terminal block (not separately powered) ■ Motor must be single speed and should not be powered by a frequency inverter or soft starter.

Double Brakes (DBR)

Build

Some applications require two independent brakes to meet industry safety guidelines.

Double Brakes for Theatrical Applications

Many international standards for braking systems used on theatre hoists mandate the use of brakes that automatically set when power is removed. Redundancy is also required with the system brakes. If one brake fails, the other brake can still operate the system by running independently and parallel to each other. NORD DBR (2xBRE) brake systems are designed to meet these requirements. The NORD double brakes are also designed for quiet operation < 50dB(A).

Some safety standards require that the load brake hold 1.25 times the rated load at test. We recommend selecting the brake for approximately 1.6 to a maximum of 2.0 times the required operating torque for each brake.

The NORD double theatre brakes do not need to be worn-in and will achieve their full braking torque initially.

Two brake rectifiers are required for operating a double brake systems. These will be provided as loose parts and are normally mounted in the customer's control panel.

The double brake option will add motor length compared to the single brake.

CAUTIONS

- NORD recommends delayed operation of one of the brakes. If the brakes are operated simultaneously, the combined torques may result in excessive torque for the gear unit or other mechanical system elements. If the brakes are set at the same time even in an E-stop condition, the gear units must be sized to handle this increased torque.

Motor	Brake	7 Springs		5 Springs		4 Springs

Brake Control Rectifiers

NORD brake control rectifiers convert AC voltage to DC voltage. Rectifiers are used because in many instances AC voltage is used to power the motor, but DC voltage is required to power the brake, and DC power is not typically available. NORD brakemotors typically include a rectifier that is located inside the terminal box. NORD rectifiers can be powered by the motor terminal block, or by a separate power source.

Rectifier Advantages

- Individual power source for each brake.
- Compact size, mounted inside the terminal box.
- Multiple types, voltage options and release/engagement modes available.
- Mountable in a separate control cabinet.
- Integral protection against voltage spikes.

Rectifier Terminals	Description
1, 1a, 1b & 2	Brake Supply AC Voltage
3 & 4	DC-Switching Contact or Jumper
5 & 6	Connection to Brake Coil

Rectifier Nomenclature

G H E 4 0 L

- Electronic Protection**
L = Varnish coated
V = Encapsulated
- Voltage Range**
20 = up to 275VAC input
40 = up to 480VAC input
50 = up to 575VAC input
- Type of DC Switching**
E = External DC-switching (contact)
U = Internal DC-switching (voltage)
- Type of Rectifier**
H = Half-wave
V = Full-wave (bridge)
P = Push-Hybrid (full & half-wave)
U = Dual (full & half-wave)
- Rectifier**

Rectifier Protection

Coated Electronics (G...L)

NORD standard rectifiers are provided with each brake motor (except 24 VDC brakes) unless a sealed or high performance rectifier is specified.

Standard Rectifiers

Nomenclature	Part #	Type	Color
GVE20L	19141000	Full-wave	Black
GHE40L	19141010	Half-wave	Yellow
GHE50L	19141020	Half-wave	Grey

Potted Electronics G...V

NORD offers rectifiers that are sealed with an electrically safe resin to ensure that water and moisture will not pass into the rectifier. Sealed rectifiers have the same brake performance ratings as the standard rectifier and can be beneficial if water is present in the motors terminal box.

Sealed Rectifiers

Nomenclature	Part #	Type	Color
GVE20V	19141030	Full-wave	Black
GHE40V	19141040	Half-wave	Yellow
GHE50V	19141050	Half-wave	Grey
GUE40V	19140300	Full/Half-Wave	Black

Rectifier Types

Full-wave rectifier:

The DC output voltage is 90% of the applied input AC voltage.

Half-wave rectifier:

The DC output voltage is 45% of the applied input AC voltage.

Dual Rectifier (Full/Half Wave):

The GUE rectifier is a "dual" rectifier that is either a full-wave or a half-wave rectifier depending on how it is connected. An advantage for using this rectifier is when using it together with a 205 VDC brake coil, it is able to operate on either a 230 VAC or 460 VAC power connection.

Push-Hybrid rectifier (Full/Half Wave):

These rectifiers are designed to switch from an initial full-wave mode to a final half-wave mode. They include GPE, GPU, and PMG rectifier types and are utilized to improve brake performance by providing faster stopping times or shorter brake release times.

Stopping Methods

NORD brake rectifiers have the ability to provide different stopping performance. The different performance is achieved by using a different rectifier and/or wiring the rectifier differently. The different methods include:

- **Standard Stopping** (AC Switching)
- **Fast Stopping** (DC Switching)
- **Fast Stopping** (DC Switching via Integrated Voltage Sensing)
- **Very Fast Stopping** (Reduced Power Holding and DC Switching)
- **Very Fast Stopping** (Reduced Power Holding and DC Switching via Integrated Voltage Sensing)

Standard Stopping (AC Switching)

The rectifier can be wired to operate by supplying and removing AC power, commonly called AC switching. The advantage to using AC switching is that the rectifier can be powered directly from the motor's terminal block and no additional wiring is required. However, tapping into the motor's terminal block gives the slower stopping time due to the de-energizing time of the motor's magnetic field. The stopping time can be improved by wiring the rectifier from an external power supply.

Fast Stopping (DC switching)

DC switching directly interrupts the current flow in the DC circuit of the rectifier. This provides much faster stopping, because you do not need to wait for the motor's magnetic field to de-energize. To implement DC switching, a normally open relay must be installed between terminals 3 and 4 on the rectifier for rectifier types GVE, GHE, and GPE. For GPU type rectifiers simply remove the jumper between terminals 3 & 4 to activate DC switching.

Power Source	Brake Release (start)	Brake engagement (stop)	Braking Method *	Rectifier
Motor Terminal Block	Standard	Standard (AC switching)	10	GVE or GHE
Motor Terminal Block	Fast (Overexcitation)	Standard (AC switching)	30	GPE or PMG 500
Separate Power Source	Standard	Standard (AC switching)	20	GVE GHE or GUE
Separate Power Source	Fast (Overexcitation)	Standard (AC switching)	45	GPU or PMG 500

* Braking methods referenced in connection diagrams on pages 295 - 297.

Power Source	Brake Release (start)	Brake engagement (stop)	Braking Method *	Rectifier
Motor Terminal Block	Standard	Fast (DC switching)	15	GVE or GHE
	Fast (Overexcitation)	Fast (DC switching)	35	GPE or PMG 500
Separate Power Source	Standard	Fast (DC switching)	25	GVE GHE or GUE
	Fast (Overexcitation)	Fast (DC switching)	50	GPU or PMG 500

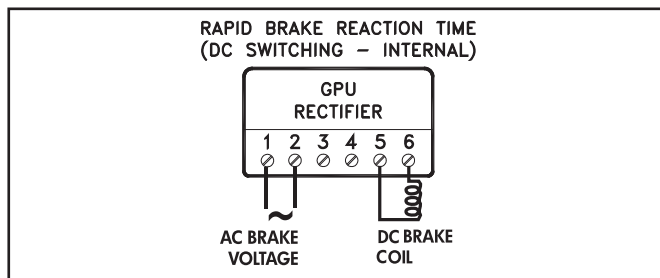

* Braking methods referenced in connection diagrams on pages 295 - 297.

Fast Stopping (DC switching Via Integrated Voltage Sensing)

Our GPU rectifier's integrate DC-Switching by sensing the AC voltage supplied to the rectifier. When no voltage is present the GPU rectifier automatically opens the DC circuit. The GPU rectifier is primarily designed for use with a separate brake power source, such as inverter powered motors, soft-start motors, and two-speed motors.

The GPU rectifier is primarily designed for use with a separate brake power source, such as inverter powered motors, soft-start motors, and two-speed motors.

- Terminals 1 & 2 - Brake system connection to AC supply voltage
- Terminals 3 & 4 - No Jumper Connected
- Terminals 5 & 6 - DC Voltage Connection to the brake coil

Power Source	Brake Release (start)	Brake engagement (stop)	Braking Method *	Rectifier
Seperate Power Source	Fast (Overexcitation)	Fast (DC switching)	50	GPU

* Braking methods referenced in connection diagrams on pages 295 - 297.

Very Fast Stopping (DC switching Via Reduced Power Holding)

In reduced power holding, the rectifier initially supplies the rated DC voltage to the brake coil. When voltage is first applied, the rectifier operates as a full-wave rectifier (90% of the applied AC voltage), releasing the brake in the standard time. After the brake is released, the rectifier switches to half-wave mode (45% of the applied DC voltage), weakening the brake's magnetic field. The weaker field will allow the brake to stop more quickly when power is removed. In this method the brake coil is selected as if the brake system is powered by a full-wave rectifier. Therefore, the brake coil's DC-voltage rating should be 90% of the AC voltage applied to the rectifier.

- Terminals 1 & 2 - Brake system connection to AC supply voltage
- Terminals 3 & 4 - Installed Jumper for AC switching or Switch contact (as shown) for DC switching
- Terminals 5 & 6 - DC Voltage Connection to the brake coil

* The normally open contact/s (NO) is not supplied by NORD. It must close at the same time power is supplied to the brake. The contact must be capable of switching inductive loads and/or be rated IEC AC3.

- Terminals ~ & ~ - Brake system connection to AC supply voltage
- Terminals + & - - DC Voltage Connection to the brake coil
- Terminals ~ & - - Installed Jumper for AC switching or Switch contact (as shown) for DC switching

* The normally open contact/s (NO) is not supplied by NORD. It must close at the same time power is supplied to the brake. The contact must be capable of switching inductive loads and/or be rated IEC AC3.

Power Source	Brake Release (start)	Brake engagement (stop)	Braking Method *	Rectifier
Motor Terminal Block	Standard	Very Fast (Reduced Power Holding)	40	GPE or PMG 500
Seperate Power Source	Standard	Very Fast (Reduced Power Holding)	55	GPU or PMG 500

* Braking methods referenced in connection diagrams on pages 295 - 297.

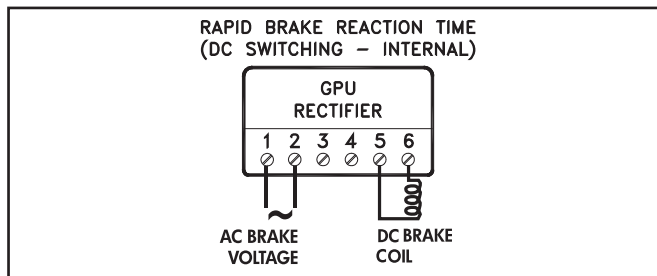

Very Fast Stopping (DC switching Via Reduced Power Holding & Integrated Voltage Sensing)

In reduced power holding, the rectifier initially supplies the rated DC voltage to the brake coil. When voltage is first applied, the rectifier operates as a full-wave rectifier (90% of the applied AC voltage), releasing the brake in the standard time. After the brake is released, the rectifier switches to half-wave mode (45% of the applied DC voltage), weakening the brake's magnetic field. The weaker field will allow the brake to stop more quickly when power is removed. In this method the brake coil is selected as if the brake system is powered by a full-wave rectifier. Therefore, the brake coil's DC-voltage rating should be 90% of the AC voltage applied to the rectifier.

These GPU rectifier s integrate DC-Switching, which is triggered by sensing the AC voltage supplied to the rectifier. When no voltage is present the GPU rectifier automatically opens the DC circuit. The GPU rectifier is primarily designed for use with a separate brake power source, such as inverter powered motors, soft-start motors, and two-speed motors.

- Terminals 1 & 2** - Brake system connection to AC supply voltage
- Terminals 3 & 4** - No Jumper Connected
- Terminals 5 & 6** - DC Voltage Connection to the brake coil

Power Source	Brake Release (start)	Brake engagement (stop)	Braking Method *	Rectifier
Seperate Power Source	Standard	Very Fast (Reduced Power Holding)	55	GPU

* Braking methods referenced in connection diagrams on pages 295 - 297.

Release Methods (Motor Starting)

NORD brake rectifiers can provide different types of release performance. The difference in performance is achieved by using a different rectifier and/or wiring the rectifier differently. The different methods include:

- Standard Brake Release (Constant Voltage)
- Fast Brake Release (Overexcitation)

Standard Brake Release (Constant Voltage)

For the standard brake release method the DC Brake coil is supplied by a constant rated DC voltage to magnetize the brake coil and release the brake. Typically the DC brake voltage is supplied via a brake rectifier. The brake rectifier converts AC supply voltage to DC output voltage to power the brake. NORD can supply rectifiers that are either full-wave or half-wave designs. The brake is released by supplying the rectifier with AC voltage which in turn supplies the brake coil with the needed DC voltage.

Example

Full-Wave

System voltage:	230 VAC
Brake coil:	205 VDC

Half-Wave

System voltage:	460 VDC
Brake coil:	205 VDC

Fast Brake Release (Overexcitation)

In overexcitation the rectifier initially over-voltages the brake coil. This overexcitation of the rectifier produces a magnetic field in the brake coil that is stronger than normal, releasing the brake much more quickly. The rectifier is then switched over to a lower holding voltage so as not to thermally overload the brake coil. In this method the brake coil is selected as if the brake system is powered by a half-wave rectifier. Therefore, the brake coil's DC-voltage rating should be 45% of the AC voltage applied to the rectifier. This type of brake control is also called "Voltage Forcing" and "Supercharging."

Example

System voltage:	230 VAC
Brake coil:	105 VDC
Initial brake release voltage:	205 VDC
Holding brake voltage:	105 VDC

Full-Wave Rectifiers (GVE)

Full-Wave Rectifiers (GVE)

Our Full-Wave rectifiers' DC output voltage is 90% of the applied input AC voltage.

GVE Rectifier Dimensions

IMPORTANT NOTE

If the motor is connected to a frequency inverter, soft start, or is a two-speed motor, the AC power must be supplied to the brake rectifier separately from the motor power.

Ratings & Part Numbers

Model Type	GVE20L	GVE20V
Part Number	19141000	19141030
Protection (electronics)	Coated	Encapsulated
Color	Black	
Input Voltage (V_{AC})	110-275 +/- 10% V_{AC}

STANDARD STOPPING AC-SWITCHING

FAST STOPPING DC-SWITCHING

Push-Hybrid Rectifiers External DC Switching (GPE)

Like the standard NORD brake control rectifiers, NORD's fast acting brake control rectifiers convert AC voltage to DC voltage. The "Fast Acting Brake Rectifiers" are utilized to improve brake performance and are often recommended in order to provide shorter brake release times or to provide faster stopping times.

The fast acting rectifiers are a two-stage "push" design. When power is first applied these rectifiers operate like a full-wave rectifier and then after a relatively short period of time they act like a half-wave rectifier. The GPE type rectifiers start out in full-wave mode when power is first applied and then after approximately 250 ms they switch to half-wave mode.

GPE rectifiers were designed for external control of the brake's DC-switching. GPE rectifiers are primarily used in across-the-line applications where the brake power is supplied by the motor terminals, but they may also be used in situations where the brake power is supplied separately to the brake rectifier.

There are two ways to apply the fast acting rectifiers:

- The first method, known as "Overexcitation," provides fast brake release. The brake coil is selected like a half-wave system (45% of the AC supply voltage).
- The second method, known as "Reduced Power Holding," provides very fast brake stopping. The brake coil is selected like a full-wave system (90% of the AC supply voltage).

IMPORTANT NOTE

If the motor is connected to a frequency inverter, soft start, or a two-speed motor, then separate AC power must be supplied to the brake rectifier.

GPE Rectifier Dimensions

Ratings & Part Numbers

Model Type	GPE20L	GPE40L
Part Number	19140230	19140240

40	Standard	Very Fast (Reduced Power Holding)	Motor terminals
30	Fast (Overexcitation)	Standard (AC Switching)	Motor terminals
35	Fast (Overexcitation)	Fast (DC Switching)	Motor terminals

Basic Connection (AC & DC Switching)

The GPE brake system can be connected for standard stopping (AC-Switching), fast stopping (DC-Switching) and very fast stopping (Reduced power holding & DC-Switching). Fast brake release can also be achieved by selecting a different brake coil combination.

STANDARD STOPPING (AC-SWITCHING)

FAST & VERY FAST STOPPING (DC-SWITCHING)

Push-Hybrid Rectifiers External DC Switching (PMG)

Push-Hybrid Rectifiers External DC Switching (PMG)

Like the standard NORD brake control rectifiers, NORD's fast acting brake control rectifiers convert AC voltage to DC voltage. The "Fast Acting Brake Rectifiers" are utilized to improve brake performance and are often recommended in order to provide shorter brake release times or to provide faster stopping times.

The fast acting rectifiers are a two-stage "push" design. When power is first applied these rectifiers operate like a full-wave rectifier and then after a relatively short period of time they act like a half-wave rectifier. The PMG type rectifiers start out in full-wave mode when power is first applied and then after approximately 250 ms they switch to half-wave mode.

PMG rectifiers were designed for external control of the brake's DC-switching. PMG rectifiers are primarily used in across-the-line applications where the brake power is supplied by the motor terminals, but they may also be used in situations where the brake power is supplied separately to the brake rectifier.

There are two ways to apply the fast acting rectifiers:

- The first method, known as "Overexcitation," provides fast brake release. The brake coil is selected like a half-wave system (45% of the AC supply voltage).
- The second method, known as "Reduced Power Holding," provides very fast brake stopping. The brake coil is selected like a full-wave system (90% of the AC supply voltage).

Basic Connection (AC & DC Switching)

The GPU brake system can be connected for standard stopping (AC-Switching), fast stopping (DC-Switching) and very fast stopping (Reduced power holding & DC-Switching). Fast brake release can also be achieved by selecting a different brake coil combination.

i
IMPORTANT NOTE
i

The GPU rectifier may also be utilized for across-the-line applications; however it must always be powered separate from the motor and have its own pair of contactors or starters. It is unadvisable to use the motor terminal block to supply the GPU rectifier's AC power due to the motor's slow energy dissipation when switched off.

i
IMPORTANT NOTE
i

If the motor is connected to a frequency inverter, soft start, or a two-speed motor, then separate AC power must be supplied to the brake rectifier.

Current – 24VDC coil	[A]	0.92	1.17	1.63	1.75	2.08

Brake Size Calculation

Torque and inertias below are based on the motor speed. Load side torques must always be divided by the gear reduction ratio. Inertias must be divided by the *square* of the gear ratio. You must also consider any external reduction ratio outside the gearbox.

Selection for holding loads (static)

$$T_{req} = T_{stat} = T_{load} \times K$$

Selection for stopping loads (static + dynamic)

$$\sum J = J_{motor} + \frac{J_{load}}{i^2}$$

Typically other inertias, like the gearbox, can be ignored.

$$T_{dyn} = \frac{\sum J \times n}{25.7 \times t}$$

$$T_{req} = (T_{dyn} \pm T_{load}) \times K$$

For driving loads use: $-T_{load}$
 For overhauling loads use: $+T_{load}$

Brake Work Verification

$$W = \frac{\sum J \times n^2}{5880} \times \frac{T_B}{T_B \pm T_{load}} \Rightarrow W \leq W_{max}$$

For driving loads use: $+T_{load}$
 For overhauling loads use: $-T_{load}$

The permissible values for W_{max} (Friction work) depend on the stopping frequency. See diagram at right.

In applications where the brake is operated frequently, two brake work values should be evaluated to ensure adequate brake life: the braking work compared to the braking frequency and the maximum work limit for a single operation, such as an E-stop. Reviewing these two values will help determine the optimal solution and ensure long brake life.

Abbreviation Key

c/h	=	Number of brakes per hour
J [lb-ft ²]	=	Inertia
J _{motor} [lb-ft ²]	=	Motor inertia
i	=	System reduction ratio
K	=	Safety factors. Based on application and according to industry rules and practices Hoisting >2 Hoisting with people >2..3 Travel drives 0.5 to 1.5
T _B [lb-in]	=	Brake torque
T _{dyn} [lb-in]	=	Dynamic torque
T _{req} [lb-in]	=	Required brake torque
T _{load} [lb-in]	=	Load torque
T _{stat} [lb-in]	=	Static torque
n [rpm]	=	Motor speed
t, [sec]	=	Stopping time
W [J]	=	Brake work
W _{max} [J]	=	Maximum brake work for one brake operations

AC Vector Drive SK 200E Selection

NORDAC SK 200E Motor Mounted AC Vector Drives

NORD has now added a new member to the distributed control family, the new SK 200E AC vector drive. This series is designed to be mounted directly on the motor terminal box to create a combined, fully integrated unit for use in the field.

The functional spectrum of the SK 200E ranges from simple drive applications to complex positioning control. Their low-cost design, variable equipment, compact size and their compatibility with various connection systems, makes them especially suitable for material handling, pumping, packaging, and a variety of other industrial and commercial applications.

Features of the SK 200E include, but not limited to:

- Sensorless & closed-loop vector control modes for superior speed regulation
- Positioning control capabilities
- Incremental encoder input as standard
- Mechanical brake rectifier and controls
- Configuration DIP switches for quick commissioning
- Plug-in storage module (EEPROM)
- "Safe Stop" and AS-Interface options
- Dynamic braking control for regenerative loads
- Various potentiometer and field bus modules for AC vector drive control
- IP55 & IP66 rated enclosures

SK 200E AC Vector Drive Ratings

- 1~115V 0.33 - 1 hp (0.25 - 0.75kW)
- 1~240V 0.33 - 1.5 hp (0.25 - 1.1 kW)
- 3~240V 0.33 - 15 hp (0.25 - 11 kW)
- 3~480V 0.75 - 30 hp (0.55 - 22 kW)

Electromechanical Brake Interface & Coil Voltage Selection

200E Selection

The SK 200E is supplied electro-mechanical brake controls with the use of a dedicated high voltage DC power supply. The SK 200E utilizes a half-wave rectifier and the brake coil voltage must be specified per the following table:

Nominal AC Input Voltage	Brake Coil Voltage
115/230 V	105 V
400 V	180 V
460/480 V	205 V

Selection Steps

- 1. SK 2X0E or 2X5E Inverter Selection:**
Choose the SK 200E AC Vector drive based on drive features, motor power rating, input voltage and protection class.
SK 2X0E - Component Class Drive
SK 2X5E - System Class Drive
- 2. SK 200E Motor Adapter Selection:**
Select the required SK 200E motor adapter based on Frame size, Series, Input phases and protection class.
- 3. Option Module Selection (if required):**
Choose specific option modules such as 24VDC power supply, a speed POT or L-O-R switch, or a Fieldbus /IO Extension if they are required for your AC Vector Drives needs.
- 4. Technology Unit Adapter Selection (if required):**
Select an assembly adapter based on a specified technology unit and protection class if required.
- 5. Dynamic Braking Resistor Selection (if required):**
Choose a specific braking resistor based on its location as well as its voltage rating and number of phases if required for your Inverter selection.
- 6. Wall Mount Adapter Selection (if required):**
Select a wall mounting unit based on either frame size and/or technology unit if the unit is not to be mounted to a motor.
- 7. Programmer/Operator Selection (if required):**
Choose a specific type of programming/operation device based on specified needs. (if required)

SK200E AC Vector Drives

The range of performance allows users to select a compact device with exactly the features that are required for the particular application, thus ensuring an extremely efficient use of resources. All SK 200E versions have the same appearance, enabling uniform operation and handling. All devices and optional external technology units such as field bus or I/O systems can be linked via an integrated system bus to make integration much simpler.

Motor Adapter Interface

The SK 200E requires a motor adapter/interface so it may be properly mounted to the motor or to an appropriate wall-mount bracket. The motor adapter houses the input power and motor terminals, as well as the standard control I/O. The motor adapter also allows the user to install internal option modules and dynamic braking resistors. The outside of the motor adapter has provisions to install external option modules and dynamic braking resistors, as well as quick-disconnect power and control connectors.

AC Vector Drive SK 200E

Step 3: 24VDC Power Supply Selection (if required)

Module Type	Module Input Voltage*	Protection Class*
SK <input type="text" value="7"/> - 24V -	<input type="text" value="8"/>	<input type="text" value="4"/>

* applies only to external "TU4" units

7 Module Type (Internal/External)
CU4 - Internal Customer Unit
TU4 - External Technology Unit
8 Module Input Voltage
123B - All 100-120V & 200-240V Units
140B - All 380-480V Units
4 Protection Class
Blank - IP55
-C - IP66

Step 3: Speed POT & L-O-R Switch (if required)

Module Type	Module Input Voltage*	Protection Class*
SK <input type="text" value="7"/> - POT -	<input type="text" value="8"/>	<input type="text" value="4"/>

* applies only to external "TU4" units

DEV - DeviceNet
IOE - I/O Extension
10 M12 Connectors for Module I/O
Blank - Not required
M12 - M12 Connectors Included
4 Protection Class
Blank - IP55
-C - IP66

Customer Units

Internal customer interfaces enable the expansion of the range of functions of SK 200E AC vector drive without changing the physical size. Users have access to communication modules, an internal control power module or an I/O expansion.

Technology Units

For the distributed control SK 200E AC vector drives, optional technology units are available.

These units may be mounted directly on the device or separately on the machine frame or plant component. Communication systems both with & without connection facilities for sensors, actuators and control modules are available for most current applications. All external technology adapters require an adapter for proper operation and coordination with the SK 200E. (SK TI4-TU-XXX selection on page 313)

Customer & Technology Unit Options Include:

- 24Vdc power supply
- Potentiometer & start/stop selector switch
- Expanded I/O control
- Profibus
- CANopen
- DeviceNet

Step 4: Technology Unit Adaptor Selection

(required for all "SK TU44-xxx" modules)

	Assembly Adaptor for TU4*	Protection Class*
SK TI4-TU-	①	④

* applies only to external "TU4" units

①	Assembly Adaptor for TU4 Technology Units
BUS - For all PBR, CAO, DEV, and IOE Technology Units	
NET - For all 24V and POT Technology Units	

④	Protection Class
Blank - IP55	
-C - IP66	

Step 5: Dynamic Braking Resistor Selection (if required)

	Dynamic Braking Resistor Location	Dynamic Braking Resistor Rating
SK TI4-TU-	⑫	⑬

⑫	Dynamic Braking Resistor Location
BUS - For all PBR, CAO, DEV, and IOE Technology Units	
NET - For all 24V and POT Technology Units	

⑬	Dynamic Braking Resistor Rating
1-100-100 - 100-120V, 1-phase & 200-240V 1-phase (all ratings)	
1-200-100 - 200-240V, 3-phase (0.25-2.2 kW)	
2-100-200 - 200-240V, 3-phase (3.0-4.0 kW)	
1-400-100 - 380-480V, 3-phase (0.55-4.0 kW)	
2-200-200 - 380-480V, 3-phase (5.5-7.5 kW)	

Step 6: Wall Mount Adaptor Selection (if required)

	Selection Code For Adaptor
SK TIE4-WMK-	⑩

⑩	Selection Code for Adaptor
1 - For inverter frame sizes 1 & 2**	
2 - For inverter frame size 3**	
TU - For external Technology Units	

** See Box 5 on page 311 for frame sizes

Step 7: Programmer/Operation Device (if required)

Programmer/Operation Device Selection	
<input type="checkbox"/>	SK CSX-3H - Simple Box (LED Display)
<input type="checkbox"/>	SK PAR-3H - Parameter Box (LCD English Display)
<input type="checkbox"/>	SK PAR-2E - Panel Mount Parameter Box (LCD English Display)
<input type="checkbox"/>	RJ12-SUB/D - PC Cable for NORDCON software

Dynamic Braking Resistor

The SK 200E also has options for internal and external dynamic braking resistors (DBR). A DBR is used for applications with regenerative loads such as lifting, cyclical, and high inertia loads. The DBR will dissipate the regenerative energy from the motor as heat using the internal brake chopper that is provided with the SK 200E.

Wall Mount Kit

The SK 200E may be installed away from the motor with the use of a wall-mount kit. The motor adapter is mounted on the wall-mount kit instead of on the motor conduit box and may be installed on a wall, piece of machinery, or in a panel. The IP55 or IP66 protection is maintained when used with a wall-mount kit.

Programming Tools

A variety of programming and operation interfaces are available for the SK 200E. The SK PAR-3H (hand-held) and SK PAR-2E (panel mount) provide programming, troubleshooting, and operation controls with an easy to use LCD English display. These modules have the capability of storing up to 5 different parameter sets for simple transfer of settings to other units.

The SK CSX-3H is used in a similar fashion as the SK PAR-3H and SK PAR-2E, but implements a bright, 4-digit 7-segment LED display.

With the use of Nord's RJ12-SUB/D cable, users may connect a SK 200E to a PC and configure it with NORDCON software. NORDCON is a Windows-based program that enables the user to program, upload/download parameter sets, troubleshoot with built-in oscilloscope function, and control their AC vector drive.

Digital input	4x, low 0-5V, high 14-30, R _i = 9.5kΩ, C _i = 10nF, cycle time =4mc
Electrical isolation	Control terminals
Control Methods	<ul style="list-style-type: none"> <li style="width: 50%;">• V/f Constant torque <li style="width: 50%;">• Sensorless Vector (ISD) <li style="width: 50%;">• Energy saving mode <li style="width: 50%;">• Closed-Loop Vector
Control outputs	Digital output: 18-30V DC (according to VI 24V), maximum 200mA, maximum 100kΩ load Brake rectifier: maximum 0.5A choke voltage, voltage according to mains
Interfaces	Standard: RS 485 (USS), RS 232 (single slave), System Bus Optional: Profibus, CANopen, DeviceNet, AS Interface
Energy Efficiency of AC drive	Approximately 95% according to size
Ambient temperature	-25 ...+40°C (S1- 100% ED), -25 ... +50°C(S3 - 75% ED 15min)
Storage & transport temp.	-25 ...+60 / 70°C
Long term storage	<ul style="list-style-type: none"> • Connect the FI & the 24V modules to the mains voltage for 60 min. before 1 storage year • Connect the FI & the 24V modules to the 24V control for 60 min. before 1 storage year • Maintain this cycle throughout the storage period
Protection class	IP55, optional IP66
Maximum mounting altitude above sea level	<ul style="list-style-type: none"> • Up to 1000m – No power reduction • 1000 - 4000m – 1% per 100m power reduction (up to 2000m overvoltage cat.3) • 2000 - 4000m – Overvoltage cat. 2 is maintained, external overvoltage protection at the mains input is necessary
Waiting period between power-up cycles	60 seconds for all devices in a normal operating cycle
Accel / Decel Time	0.0 ... 320.0s
Connection terminals	<ul style="list-style-type: none"> • Mains or motor / brake resistance - 4mm² with wiring sleeves, 6mm² with rigid cable • Control unit / system bus - 2.5mm² with 1.5mm² wiring sleeves • RS485 / RS232 - 1xRJ12 (6-pin)
Connection terminal screw tightening torque	1.2 - 10.5 Nm
External 24V supply voltage	18...30V DC, at least 200-800mA according to load

AC Vector Drives SK 500E

NORDAC SK 500E AC Vector Drives

NORD has now expanded its centralized control family by adding increased functionality with new versions of the SK 500E AC vector drive line. This series is designed to be mounted in a control panel to seamlessly integrate with the centralized controls.

With the SK 500E series of AC vector drives, NORD offers intelligent and cost-effective drive solutions with scalable equipment options, which are all fully compatible with regard to motor performance range, supply voltage and sizes. The basis for all models is a well-equipped basic unit with expansion possibilities through optional modules. SK 500E AC vector drives are suitable for all application areas and can be easily adapted to specific requirements with plug-in technology units.

Features of the SK 500E include, but not limited to:

- Sensorless & closed loop vector control modes for superior speed regulation
- Positioning control capabilities
- Incremental and absolute encoder inputs
- "Safe Stop" as per EN 954-1, max. Cat. 4
- Dynamic braking control for regenerative loads
- Various potentiometer and field bus modules for AC vector drive control

SK 500E AC Vector Drive Ratings

- 1~115V 0.33 - 1 hp (0.25 - 0.75kW)
- 1~240V 0.33 - 3 hp (0.25 - 2.2 kW)
- 3~240V 0.33 - 25 hp (0.25 - 18.5 kW)
- 3~480V 0.75 - 125 hp (0.55 - 90 kW)

Selection Steps

1. SK 500E Inverter Selection:

Choose the SK 500E AC vector drive based on motor power rating, input voltage supply, and drive features. Use the SK 500E Rating & Voltage Matrix to ensure the desired Series is available in the selected kW Rating and Input Voltage ratings.

2. Interface Module (Tech. Unit) Selection (if required):

Choose specific technology unit such as speed POT with start/stop, fieldbus interface, or programming and display module.

3. Dynamic Braking Resistor Selection (if required):

Choose a specific braking resistor based on the AC vector drive's voltage and power rating

4. Programmer/Operator Selection (recommended):

Choose a specific type of programming/operation device based on specified needs. (if required)

NORDAC SK 500E AC Vector Drives

The range of options and performance allows users to select a device with the exact features that are required for the application, thus ensuring an extremely efficient use of resources. All SK 500E versions have the same appearance, enabling uniform operation and handling. All devices and optional technology units such as field bus or I/O systems can be linked via an integrated system bus to make integration much simpler.

545	Basic Unit + Safe Stop + CANopen + Encoder Input + Extra I/O + POSICON + Integrated PLC functionality + Universal Encoder Interface + 24V Operation*

* Please Refer to the Rating and Voltage Matrix on page 321 to ensure the desired Series is available in the selected KW and Input Voltage Ratings that you have selected.

* External 24V supply required on select ratings. Refer to the Rating and Voltage Matrix on page 321 for more detail.

Step 2: Interface Module (Tech. Unit) Selection

Module Type
SK TU3 -

Module Type (Internal/External)
CTR - Control box programmer & display
PAR - Parameter box programmer & English display
POT - Speed potentiometer with star/stop and reverse direction
PBR - Profibus interface
PBR-24V - Profibus interface requiring external 24VDC supply
IBS - Interbus interface
CAO - CANopen interface
DEV - DeviceNet interface
AS1 - AS interface
ECT - Ethercat interface
PNT - Profinet interface
EIP - Ethernet/IP Interface
POL - Powerlink Interface

Technology Units

Each SK 500E is equipped with a modular slot with re-movable cover. Here, a technology unit specific for the application can be added to program or control the unit, or to access the field bus system.

Step 3: Dynamic Braking Resistor Selection

Model Type R. Ohms C. Rating
SK BR4 - /

Model Type	Input Voltage	Drive Rating	Resistance Ohms	Continuous Rating
4: Footprint (SK 500E) (SK 505E) (SK 510E) (SK 511E) (SK 520E) (SK 530E) (SK 540E)	115/ 230V	0.25 - 0.37 kW	240	100
		0.55 - 0.75 kW	150	100
		1.1 - 2.2 kW	75	200
		3.0 - 4.0 kW	35	400
	460V	0.55 - 0.75 kW	400	100
		1.1 - 2.2 kW	210	200
		3.0 - 4.0 kW	100	400
		5.5 - 7.5 kW	60	600
2: Chassis (SK 515E) (SK 535E) (SK 545E)	230V	3.0 - 4.0 kW	35	400
		5.5 - 7.5 kW	22	600
		11.0 kW	12	1500
	460V	15.0 - 18.5 kW	9	2200
		3.0 - 4.0 kW	100	400
		5.5 - 7.5 kW	60	600
		11.0 - 15.0 kW	30	1500
		18.5 - 22.0 kW	22	2200
460V	30.0 - 37.0 kW	12	4000	
	45.0 - 55.0 kW	8	6000	
75.0 - 90.0 kW	6	7500		

Dynamic Braking Resistors

The SK 500E has options for bottom-mounted (footprint type) and external-mounted (chassis-type) dynamic braking resistors (DBR). A DBR is used for applications with regenerative loads such as lifting, cyclical, and high inertia loads. The DBR will dissipate the regenerative energy from the motor as heat using the internal brake chopper that is provided with the SK 500E.

Only the bottom-mounted dynamic braking resistors are shown in this selection guide. If a DBR for an AC vector drive that was selected is not shown in this guide, refer to the SK 500E operation manual BU 0500 GB for additional information.

The bottom-mounted DBRs are for general braking purposes. Larger DBRs may be required depending on the application parameters. Contact NORD for assistance with selecting the appropriate DBR.

AC Vector Drives SK 500E

Step 4: Programmer/Operation Selection (recommended)

Programmer/Operation Selection
SK CSX-3HS - Handheld Simple Box (LED Display)
SK PAR-3H - Handheld Parameter Box (LCD English Display)
SK CSX-3E - Panel Mount Simple Box (LED Display)
SK PAR-3E - Panel Mount Parameter Box (LCD English Display)
RJ12-SUB/D - PC cable for NORDCON software
SK CSX-0 - Simple programmer and display mounted on top of SK 500E

A variety of programming and operation interfaces are available for the SK 500E. The SK PAR-3H (handheld) and SK PAR-3E (panel mount) provide programming, troubleshooting, and operation controls with an easy to use LCD English display. These modules have the capability of storing up to 5 different parameter sets for simple transfer of settings to other units.

SK PAR-3H

SK PAR-3E

The SK CSX-3H (handheld) and SK CSX-3E (panel mount) is used in a similar fashion as the SK PAR-3H and SK PAR-3E, but implements a bright, 4-digit 7-segment LED display.

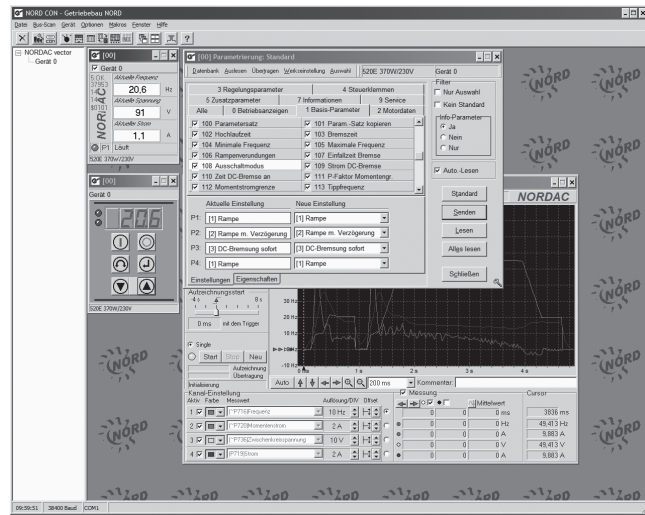

SK CSX-3H

SK CSX-3E

With the use of Nord's RJ12-SUB/D cable, users may connect a SK 500E to a PC and configure it with NORDCON software. NORDCON is a Windows-based program that enables the user to program, upload/download parameter sets, troubleshoot with built in oscilloscope function, and control their AC vector drive.

The CSX-0 is a simple programming and control tool that is installed on the top of the SK 500E and provides access to the drive settings and can be used as a local speed controller. An example of when this device may be used is when a field bus technology unit is already installed and the user would like a programming tool with speed readout also installed on the AC vector drive.

$$\text{rpm} = \frac{\text{fpm} \times 3.820}{\text{Dia}_{(\text{in})}}$$

Metric M Threads

For metric "M" threads, it is customary to omit the thread pitch for course threads.	Course threads and pitch
For example, if a thread is called out as an M8 with no pitch shown, it is automatically a course pitch thread.	M6 x 1
	M8 x 1.25
	M10 x 1.5
	M12 x 1.5
	M16 x 2
	M20 x 2.5
	M24 x 3

Selection – mass acceleration method

The selection tables list the produced torques, output speeds, and service factors, f_B , based on FLEXBLOC™ worm gearboxes in combination with 4-pole NORD 3-phase motors. The service factor indicates the safety of the gearbox at the given input power.

Each application has specific loading requirements such as peak loads, frequent start-ups, intermittent duty, and extreme ambient temperatures. All have a minimum service factor, f_{Bmin} , to ensure reliable operation. The unit chosen from the selection tables should have a service factor that is equal to or larger than the minimum service factor required.

The selection tables “1750/1150/850/100 rpm” can be used for motors other than 4-pole (1750 rpm) standard 3-phase models. The selection tables are based on a service factor $f_B = 1.0$. Observing the minimum service factor, f_{Bmin} , the motor power installed must not exceed P_{1max}/f_{Bmin} .

The required minimum service factor f_{Bmin} for an application is calculated as:

$$f_{Bmin} = f_{B0} \times f_{B1} \times f_{B2}$$

Factor f_{B0} accounts for the load type, A, B, or C; the start/stop frequency; and the daily operating time. Factor f_{B1} accounts for different ambient temperatures. Factor f_{B2} accounts for intermittent duty cycle. The following diagrams are used for defining the individual factors f_{B0} , f_{B1} , and f_{B2} .

Examples for gearbox loading type:

- A** Light conveyor screws, fans, assembly lines, light conveyor belts, small agitators, elevators, cleaning machines, filling machines, inspection machines, and belt conveyors.
- B** Coilers, feed-mechanism drives in woodworking machines, dumbwaiters, balancing machines, thread-cutting machines, medium-sized agitators and mixers, winches, sliding doors, manure scrapers, packing machines, bending machines, and gear pumps.
- C** Shears, presses, punches, folding machines, tumbling barrels, vibrators, and shredders.

Other machines must be associated to A, B, or C depending on the load type they represent.

The load types A, B, and C are defined as follows:

- A:** uniform duty operation and $m_{af} \leq 0.25$
- B:** medium duty operation and $m_{af} \leq 3$
- C:** heavy duty operation and $m_{af} \leq 10$

The definition of the mass-acceleration-factor m_{af} is:

$$m_{af} = \frac{J_{ex.red}}{J_{motor}}$$

$J_{ex.red}$ = all external inertia's reflected to the motor shaft
 J_{Mot} = mass moment of inertia of driving motor

In case of $m_{af} > 10$ please contact NORD.

AGMA Selection Method

Gearmotors

Before a gearmotor is selected, an application class number must be determined. Since application classification represents the normal relationship between gear design power rating and the maximum potential transmitted power, it is suggested that the application class number be applied to the nameplate rating of the electric motor. The application class numbers are I, II, and III. Their relationship to service factor is:

Class Numbers	f_B
I	1.0 - 1.39
II	1.4 - 1.99
III	≥ 2.0

Application class numbers may be selected from the table. Some operational characteristics that affect an application's classification are:

- **Starting conditions:** Starting conditions where peak loads exceed 200 percent of rated load, applications with frequent starts and stops and reversing applications require special analysis. Rated load is defined as the unit rating with an application class number of I (1.0 - 1.39 service factor).
- **Overloads:** Loads in excess of the rated load are considered overloads. Overload can be of momentary duration, periodic, quasi-steady state, or vibratory in nature. The magnitude and the number of stress cycles require special analysis to prevent low cycle fatigue or yield stress failure. Applications with high torque motors, motors for intermittent operation and applications where extreme repetitive shock occurs or where high-energy loads must be absorbed as when stalling require special consideration.
- **Brake equipped applications:** When a gear drive is equipped with a brake that is used to decelerate the motion of the system, select the drive based on the brake rating or the equivalent power, whichever is greater. If the brake is located on the output shaft of the gear drive, special analysis is required.
- **Reliability and life requirement:** Applications requiring a high degree of reliability or unusually long life should be given careful consideration by the user and NORD GEAR before assigning an application class number. High reliability and life should be addressed by using an increased safety factor agreed to between NORD and the purchaser.

Synchronous motors, certain types of high torque induction motors and generator drives require special analysis. Synchronous motors have high transient torque during starting and restarting after they trip out momentarily.

Induction motors of special high slip design can produce extremely high starting torque. High torque loads are produced when the motor trips out for a very short time and then the trip re-closes.

Generators have extremely high loads when they are out of phase with the main system and when there are across the line short circuits.

Adjustments to the gear drive selection may be necessary when one or more of the following conditions exist:

- Ambient conditions. Extremes of temperature and environment.
- Lubrication. Any lubricant not in accordance with NORD's recommendations.
- Misalignment and distortions due to inadequate foundations.
- Reversing applications.
- High-risk applications involving human safety.

The purpose of this table is to provide a guide in the selection and application of gear drives designed and rated in accordance with AGMA Standard 6009.

The service factor table has been developed from the experience of manufacturers and users of gear drives for use in common applications and has been found to be generally satisfactory for the listed industries when gears are applied using AGMA standards. It is recommended that the user and NORD Gear agree upon class numbers for special applications when variations of the table may be required.

Application	Load Duration		
	Up to 3 hrs per day	3-10 hrs per day	Over 10 hrs per day
AGITATORS (mixers)			
Pure Liquids	I	I	II

Notes to GEARMOTOR SERVICE FACTOR table:

- 1) The class numbers listed for paper mill applications are consistent with those shown in TAPPI (Technical Association of Pulp and Paper Industry) Technical Information Sheet 0406-18 1967, Service Factors for Gears on major Equipment in the Paper and Pulp Industry.
- 2) Anti-friction bearings only.
- 3) A Class Number of I may be applied at base speed of a supercalendar operating over a speed range of part-range constant horsepower and part-range constant torque where the constant horsepower speed range is greater than 1.5 to 1. A Class Number of II is applicable to supercalendars operating over the entire speed range at constant torque or where the constant horsepower speed range is less than 1.5 to 1.

Speed Reducers

Before an enclosed speed reducer or increaser can be selected for any application, an equivalent unit power rating (service factor = 1.0) must be determined. This is done by multiplying the specified power by the service factor. Since the service factor represents the normal relationship between the gear unit rating and the required application power, it is suggested that the service factor be applied to the nameplate rating of the prime mover or driven machine rating, as applicable.

NORD GEAR and the user must agree upon which power, prime mover rating or driven machine requirements, should dictate the selection of the gear drive. It is necessary that the gear drive selected have a rated unit capacity equal to or in excess of this "equivalent unit power rating".

All service factors listed are 1.0 or greater. Service factors less than 1.0 can be used in some applications when specified by the user and agreed to by NORD GEAR.

The REDUCER SERVICE FACTOR table should be used with caution, since much higher values have occurred in some applications. Values as high as ten have been used. On some applications up to six times nominal torque can occur, such as: Turbine/Generator drives, Heavy Plate and Billet rolling mills.

It has been developed from the experience of manufacturers and users of gear drives for use in common applications. It is suggested that service factors for special applications be agreed upon by the user and NORD GEAR when variations of the values in the table may be required.

Service factors shown are for reducers driven by motors (electric or hydraulic) and turbines (steam or gas) according to AGMA 6010. When the driver is a single cylinder or multi-cylinder engine, the service factors from the table must be modified for the appropriate type of prime mover.

As an example, if the application is a centrifugal blower, the service factor from the REDUCER SERVICE FACTOR table is 1.25 for a motor or turbine. The CONVERSION TABLE changes this value to 1.75 for a single cylinder engine and 1.50 for a multi-cylinder engine.

CAUTION: Any user of enclosed gear drives should make sure that the latest available information affecting the selection of a gear drive is used. When better load intensity data is available on the driving or driven equipment, this should be considered when a service factor is selected.

Conversion Table

Electric Motor, Steam & Gas Turbines, Hydraulics	Single-Cylinder Engines	Multi-Cylinder Engines

Notes to REDUCER SERVICE FACTOR table:

- 1) Service factors for paper mill applications are applied to the nameplate rating of the electric motor at the motor rated based speed.
- 2) Anti-friction bearings only. Use 1.5 for sleeve bearings.
- 3) A service factor of 1.0 may be applied at base speed of a super calender operating over-speed range of part range constant horsepower, part range constant torque where the constant horsepower speed range is greater than 1.5 to 1. A service factor of 1.25 is applicable to super calenders operating over the entire speed range at constant torque or where the constant horsepower speed range is less than 1.5 to 1. Explanatory notes.

G1035 – Subject to Change Without Notice

J345

NORD GEAR LIMITED

Terms and Conditions of Sale

1. CONTRACT

Any contract between Nord Gear Limited, hereinafter designated as "Seller", and the party or parties accepting these terms and conditions of sale and any agent, officer, servant, employee or subcontractor of such party or parties, hereinafter designated as "Buyer", is subject to the terms and conditions of sale hereinafter set forth. Any deviation from such terms and conditions must be specifically set forth in writing and consented to by Seller.

2. CONFIRMATION

An order shall be deemed accepted only when duly confirmed by Seller, at Nord Gear Limited's home office in Brampton, Ontario, and upon such confirmation the orders shall become a contract binding upon the parties hereto, their successors and assigns.

3. PRICES

Prices shown are list prices and may be subject to applicable discounts. Unless otherwise agreed upon in writing, prices are FOB factory Brampton, Ontario. Prices and discounts are subject to change without notice until the order is accepted. Seller's prices do not include cost of any inspection permits required.

4. LIMITED WARRANTY

Seller warrants the goods sold hereunder to be free from defects in material and workmanship under normal use and service not arising from misuse, negligence, or accident, including but not limited to the use, installation, and transportation of the goods by Buyer, its agents, servants, employees, or by carriers. This warranty shall pertain to any part or parts of any goods to which Buyer or its assigns has within one year from date of delivery given written notice of claimed defects to Seller. Buyer shall be required to furnish Seller with details of such defects and this warranty shall be effective as to such goods which Seller's examination shall disclose to its satisfaction to have been defective and which at Seller's option shall promptly thereafter be returned to Seller or its nominees. EXCEPT FOR THE EXPRESS WARRANTIES SET FORTH ABOVE, SELLER HAS MADE NO WARRANTIES, EXPRESS, IMPLIED OR STATUTORY, AS TO THE GOODS SOLD HEREUNDER, INCLUDING, BUT NOT LIMITED TO THEIR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, ANY DESCRIPTION OR MODEL OF THE GOODS IS FOR IDENTIFICATION OR ILLUSTRATIVE PURPOSES ONLY AND SHALL NOT BE DEEMED TO CREATE AN EXPRESS WARRANTY. The Buyer's exclusive remedy for claims arising from defective or nonconforming goods shall be limited to the repair or replacement thereof at the Seller's sole option. THE SELLER SHALL NOT BE RESPONSIBLE OR LIABLE FOR CONSEQUENTIAL DAMAGES ARISING OUT OF OR IN CONNECTION WITH THE SALE, DELIVERY, USE, PERFORMANCE, OR SERVICE OF THE GOODS SOLD UNDER THIS AGREEMENT. SELLER SHALL NOT BE LIABLE FOR ANY LOST PROFITS OR FOR ANY CLAIM OR DEMAND AGAINST SELLER BY ANY PARTY. IN NO EVENT WILL SELLER BE LIABLE FOR SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES, EVEN IF SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. SELLER'S AGGREGATE LIABILITY FOR DAMAGES UNDER THIS AGREEMENT, WHETHER ARISING FROM OR BASED UPON BREACH OF WARRANTY, BREACH OF CONTRACT, TORT OR OTHER CAUSE OF ACTION, SHALL IN NO CASE EXCEED THE PURCHASE PRICE THAT BUYER PAYS FOR THE PARTICULAR GOODS INVOLVED. Seller shall in no event be liable to any person or firm (including any assignee or Buyer) except Buyer and its successors. Unless specifically authorized by Seller in writing, Seller shall not become responsible for any repair work done by Buyer or any other party on any goods sold. Any costs of the return of such goods to Seller shall be borne by Buyer. Goods sold but not manufactured by Seller are being warranted as to defects in material and workmanship consistent with the limited warranty policy of the original manufacturer of the goods and if there is not such a limited warranty policy, the warranty shall be limited to the provisions of Article 4 herein. Standards for the operating characteristics of the gearboxes and the gear motors are in conformity with Seller's tests. THIS WARRANTY IS IN LIEU OF ALL OTHER EXPRESS OR IMPLIED WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE SELLER DOES NOT ASSUME, NOR DOES IT AUTHORIZE ANY PERSON TO ASSUME, ON ITS BEHALF, ANY OTHER OBLIGATION OR LIABILITY.

5. SHORTAGE AND NONCONFORMITY

Any claim of shortage or that the goods do not conform with the specifications of the order or model must be made in writing within ten (10) days after delivery of the goods (as to which such claim is made) to Buyer or its nominees, but in no event shall the claim be later than within the time limit provided by the carrier or insurance company, otherwise such claim shall be deemed waived. The samples, measurements, dimensions and weights contained in Seller's catalogs, sales manuals, photographs and drawings constitute only an approximate guide. Seller reserves the right to make any changes which Seller, in its absolute discretion, considers necessary. While the goods will be delivered principally according to specifications of standards or quantities agreed upon, insignificant deviations or insignificant changes in construction are permissible. The same applies to partial deliveries. In the event that Buyer has a verified claim of shortage or nonconformity of the goods to the specifications of the order or the model, and if such claim has been submitted within the required time limit as set forth above, Seller shall, at its own expense, make up for the shortage of the goods, or replace or repair the goods, as the cause may be, but in no event shall Seller be or become liable to Buyer or to any other person or persons for any loss in damage, direct or indirect, arising out of or caused by such incidents or for the loss of profits, business of good will. Shipping dates are estimates unless parties expressly agree on time of the essence.

6. FORCE MAJEURE

The obligation of Seller shall be modified or excused, as the case may be, for reasons of Acts of God, war, governmental law regulations, strikes or lock-outs, fire, breakdown of machinery, whether in its own business enterprise, or if for any other cause beyond Seller's control, the goods cannot be delivered or their delivery becomes delayed in whole or in part. In the above instances time for delivery shall be extended for the period of the delay caused, with the proviso, however, that either party may cancel in writing the undelivered portion of the order of contract if the delay exceeds six (6) months from the delivery date originally confirmed by Seller. In no event shall Seller become liable in the aforesaid instances to Buyer or any third party for consequential damages or business loss.

7. SHIPMENT AS UNIT

Each shipment by Seller shall be treated as a separate and distinct unit with respect, but only with respect to forwarding, terms of payment, and the making of claims by Buyer; provided, however, that if Buyer defaults in the payment of any obligation to Seller or any installments thereof, under any agreement between Buyer and Seller, or if Buyer refuses to accept any goods when tendered for delivery, Seller may, on fifteen (15) days written notice to Buyer, without prejudice to Seller's other lawful remedies, either defer further performance until the defaulted payments are made in full, or make future deliveries for cash in advance only, or to treat the entire contract or contracts with Buyer as breached by Buyer and pursue its remedies for breach.

8. BUYER'S REFUSAL OF DELIVERY

If Buyer refuses to accept delivery of any goods tendered for delivery, then Seller, without prejudice to Seller's other lawful remedies, may either store or cause such goods to be stored in a warehouse, for Buyer's account and at Buyer's cost, risk and expense, or sell such goods (without notice) to any purchaser at public or private sale, and hold Buyer liable for any difference between (A) the contract price of the goods, and (B) the price at which goods are resold less the costs and expense of such resale including brokerage commissions, or restocking charges.

9. GOODS IN TRANSIT

If prior to delivery or while the goods are in transit, Buyer or Seller becomes bankrupt or insolvent, or any petition in bankruptcy or for the reorganization or for appointment of a receiver is filed against Buyer or Seller, as the case may be, then the other party hereto may forthwith terminate this contract by giving written notice of such termination. Such termination shall not affect any claim for damages available to Buyer; to Seller, as actually paid in money, is abated by any order of judgment entered or any plan adopted in any bankruptcy, reorganization, receivership, or similar proceeding. Such termination shall not prejudice Seller's rights to any amounts then due under the contract. If Buyer becomes bankrupt or insolvent or any petition in bankruptcy or for reorganization or if a state court receivership is filed against Buyer, then, at its option, Seller may take possession of any goods theretofore sold to Buyer, in connection with which the full purchase price has not been paid, analogous to the terms and provisions set forth in Paragraphs 11 and 12 hereinafter.

10. DELIVERY

(A) Unless otherwise agreed, delivery of the goods to any carrier shall constitute delivery to Buyer, and thereafter the risk of loss or damage to the goods shall be upon Buyer. (B) If Buyer does not give delivery instructions to Seller at least ten (10) days prior to the delivery date exacted by Seller, Seller may deliver the goods to a carrier of its own choosing, at Buyer's cost and risk, or, at Seller's option may store the goods on the pier or on any warehouse at Buyer's cost and risk. Any purchase price in such event becomes due and payable within ten (10) days of such storage.

11. PAYMENT OF PURCHASE PRICE

Time of payment is of the essence under the contract. Upon default in any of the terms of the contract, or failure to comply with any of the conditions thereof, or upon seizure of the property under execution or other legal process, or if Buyer becomes bankrupt or insolvent, or any petitions for reorganization or for appointment of a receiver is filed against Buyer, or if Buyer makes any assignment for the benefit of its creditors or otherwise sells, encumbers or disposes of the goods, or if for any other reason Seller should deem itself insecure, the full amount of the purchase price then remaining unpaid shall at once become due and payable at the option of Seller. Interest on the delinquent payment from the due date thereof until paid shall be at a rate of two (2%) percent per month.

12. BUYER'S DEFAULT

Upon Buyer's default, Seller may dispose of the merchandise in any manner that it deems fit and, if it desires to resell same, may do so at private or public sale, with or without notice, and with or without the property being at the place of sale, subject, however, to applicable laws. Seller or its assigns shall have the right to bid at such sale and may become the purchaser of the property. The proceeds of the sale shall first be applied to the expenses incurred in retaking, repairing, storing and selling the goods; reasonable solicitor's fees included, and then shall be applied to the payment of the balance due under the contract. Any surplus amount shall be paid to Buyer. If a deficiency results after the sale, Buyer agrees to pay such forthwith, together with reasonable solicitor's fees, for the recovery of the goods incurred by Seller. If upon Buyer's default, Seller elects not to resell any goods which it may repossess, then the cost of repossession, including reasonable solicitor's fees, shall forthwith be due and payable from Buyer to Seller.

13. SECURITY INTEREST AND TITLE

In provinces which are governed by a Personal Property Security Act, this contract shall serve as a security agreement, reserving in Seller a security interest until full payment of the purchase price. The provisions of the Personal Property Security Act regarding security interest shall have preference and apply if inconsistent with other terms of the conditions of sale herein. In provinces where a Personal Property Security Act does not apply, title to the goods shall remain in the Seller or its assigns until full payment of the purchase price. Buyer agrees to execute forthwith any and all documents in such a way and form as Seller may need for filing or recording the security interest under a Personal Property Security Act with the proper registers or offices, or for filing or recording the Conditional Sales Contract herein.

14. SALES AND USE TAX

Seller's prices do not include sales, use, excise or other taxes payable to any governmental authority in respect of the sale of Seller's goods. Buyer shall pay, in addition to Seller's price, the amount of any such taxes or shall reimburse Seller for the amount thereof that Seller may be required to pay. At the option of Seller, Buyer shall give evidence of payment or of exemption certificate.

15. INSURANCE

Buyer shall keep the goods insured against damage by fire, water or other casualty as required by Seller, with a company acceptable to Seller, with loss payable to Seller for the total purchase price until Seller is fully paid. Seller, if it so elects, may place said insurance at Buyer's expense; Seller may cancel such insurance at any time and without notice and may receive the return premium, if any.

16. MODIFICATION BY SELLER

Any contract may be assigned or transferred by Seller, or the time for the making of any payment due by Buyer may be extended by Seller without derogation of any of the rights of Seller or its assigns. Waiver by any party of any default shall not be deemed a waiver of any subsequent default.

17. RETURNED GOODS

No goods will be accepted for return unless authorized in writing by Seller. In all cases, transportation and restocking charges will be borne by Buyer.

18. PACKING

Seller does not charge for standard packaging for domestic shipment. Buyer will be charged, however, for export packaging or other special packing desired. Cost for cartage to ship or transfer express will be added to the invoice. No credit will be allowed if no packing is required.

19. EXPORT ORDER

Export orders are to be accompanied by a confirmed irrevocable Letter of Credit in Seller's favor, in Canadian currency, with an accredited Canadian bank, subject to Seller's draft, with shipping documents attached.

20. CANCELLATION

Placing orders on hold or cancellation of orders require Seller's written approval, and are subject to cancellation and/or restocking charges.

21. BUYER'S RESPONSIBILITY AS TO MAINTENANCE

Buyer shall use and shall require its employees and agents to use all safety devices and guards and shall maintain the same in proper working order. Buyer shall use and require its employees and agents to use safe operating procedures in operating the equipment and shall further obey and have its employees and agents obey safety instructions given by Seller. If Buyer fails to meet the obligations herein, Buyer agrees to indemnify and save Seller harmless from any liability or obligation with regard to any personal injuries or property damages directly or indirectly connected with the operation of the equipment. Buyer further agrees to notify Seller promptly and in any event not later than ten (10) days after notice or knowledge of any accident or malfunction involving Seller's equipment which has caused personal injury or property damages and to cooperate fully with Seller in investigating and determining the causes of such accident and malfunction. In the event that Buyer fails to give such notice to Seller or to cooperate with Seller, Buyer shall be obligated to indemnify and save Seller harmless from any such claims arising from such accident.

22. MISCELLANEOUS PROVISIONS

(A) If for any reason a provision of a contract is legally invalid, then in such event the rest of the contract shall remain in full force and effect, except that the parties shall try to replace such invalid provision with a provision closest to their original mutual intentions. (B) Any amendments to any contract or contracts require the consent in writing by both parties. Headings in this document are for ease of reference only.

23. NON ASSIGNMENT BY BUYER

Contract or contracts may not be assigned by Buyer without prior written consent of Seller.

24. APPLICABLE LAW

This agreement shall be governed by the laws of the Province of Ontario and the applicable laws of Canada. Buyer and Seller agree that any judicial proceeding with respect to this agreement must be brought and maintained in the City of Toronto, in the Province of Ontario.

25.

This instrument sets forth the entire understanding and agreement of the parties hereto in respect of the subject matter hereof, and all prior undertaking between the parties hereto, together with all representations and obligations of such parties in respect of such subject matter, shall be superseded by and merged into this instrument.

26.

The provisions of this agreement shall bind and ensure to the benefit of the parties hereto and their respective heirs, executors, administrators, successors and (subject to any restrictions or assignment herein above set forth) assigns, as the case may be.

27.

The parties acknowledge that they have requested this document and all notices or other documents relating thereto be drafted in the English language.

Les parties reconnaissent qu'ils ont requis que ce contrat et tous les avis ou autres documents qui s'y rapportent soient rédigés en langue anglaise.

Terms and Conditions in French available upon request.

NORD GEAR CORPORATION

DRIVESYSTEMS

CONDITIONS OF SALE

WWW.NORD.COM

1. CONTRACT

Any contract between Nord Gear Corporation, hereinafter designated as Seller, and the Buyer is subject to the terms and conditions of sale hereinafter set forth. Any deviation from such terms and conditions must be specifically set forth in writing and consented to by Seller. Accordingly, the Buyer and Seller acknowledge and agree that the terms and conditions set forth below and on the face hereof shall govern Buyer's purchase of the goods described on the face hereof and shall take precedence over and represents the final agreement between Buyer and Seller, notwithstanding any inconsistent, contradictory or other prior or further conditions contained in any oral or written request or purchase order issued by Buyer or any other document furnished by Buyer in connection with its purchase of the Goods, regardless of whether such document or documents are exchanged simultaneously with this Invoice or prior or subsequent thereto. Any additional or different terms or conditions which may appear in any communication, oral or written, from Seller, its officers, employees, agents or representatives, are hereby expressly rejected and shall not be effective or binding upon the Seller, unless specifically hereafter agreed to in writing by Seller and no such additional or different terms or conditions in any document submitted to Seller by Buyer shall become part of the contract between Buyer and Seller, unless such written acceptance by Seller specifically recognizes and assents to their inclusion. Any objection by Buyer to the terms and conditions hereof shall be ineffective unless Seller is advised in writing thereof within two (2) days of the date of this Invoice.

2. CONFIRMATION

An order shall be deemed accepted only when duly confirmed by Seller, at Nord Gear Corporation's home office in Waunakee, Wisconsin, and upon such confirmation the order shall become a contract binding upon the parties hereto, their successors and assigns.

3. PRICES

Prices shown are list prices and may be subject to applicable discounts. Unless otherwise agreed upon in writing, prices are FOB factory Waunakee, Wisconsin. Prices and discounts are subject to change without notice until order is accepted. Seller's prices do not include cost of any inspection items required.

4. LIMITED WARRANTY

Seller hereby warrants that the goods sold hereunder shall be free from material defects in material and workmanship, if properly installed and used under normal operating conditions, for a period of twelve (12) months from the date of installation or eighteen (18) months from date of shipment, whichever comes first (the "Warranty Period"). With respect to gears and housings only, the Warranty Period is extended to thirty-six (36) months from the date of invoice or twenty-four (24) months from the date of installation, whichever comes first. The limited warranty shall not apply to any components or parts which are subject to normal operational wear and tear, including, but not limited to, belts and traction discs. Should any goods fail to comply with the foregoing limited warranty, Buyer shall provide written notice to Seller of the claimed defect and all relevant details within thirty (30) days of Buyer's discovery of the claimed defect. Buyer shall return the allegedly defective goods to Seller at its facilities in Waunakee, Wisconsin or to such other location within the USA as may be designated by Seller in its sole discretion, with all shipping and transportation charges prepaid by Buyer. Seller shall then examine the returned goods to determine if the claimed defect is covered by the limited warranty. If the claimed defect is covered by the limited warranty, Buyer's sole and exclusive remedy shall be to have Seller repair or replace, at Seller's option, the defective goods or components in accordance with the terms of this limited warranty. Seller shall have a commercially reasonable time to make such repairs or replacements and may use new or reconditioned components. Any repair or replacement shall not extend the Warranty Period unless otherwise agreed by Seller. Buyer shall pay all shipping costs and any costs of removal and re-installation of goods or components.

The foregoing limited warranty shall not apply with respect to any goods or components (i) which are not installed, used, operated, serviced or maintained in accordance with manufacturer's instructions or which are otherwise not properly installed, used, operated, serviced or maintained, or (ii) which are misused, neglected, damaged, altered, repaired, reconfigured or incorrectly wired. Seller makes no representations as to the specifications, capacity or performance of the goods sold hereunder, except as may be specifically set forth in the invoice's written specifications, and any such representations are expressly conditioned upon the accuracy and completeness of the data and information furnished by the buyer and upon the goods being properly installed, used, serviced and maintained by Buyer. Any description or model of the goods is for identification or illustrative purposes only and shall not be deemed to create any warranty, express or implied.

THE FOREGOING LIMITED WARRANTY SHALL EXTEND SOLELY TO BUYER AND NOT TO ANY OTHER PARTY. THE FOREGOING LIMITED WARRANTY IS IN LIEU OF ANY AND ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED. SELLER HEREBY EXCLUDES AND DISCLAIMS ANY AND ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IF BUYER SHALL FAIL TO PAY WHEN DUE ANY PORTION OF THE PURCHASE PRICE OR ANY OTHER PAYMENT REQUIRED FROM BUYER TO SELLER UNDER THIS CONTRACT, ALL WARRANTIES AND REMEDIES SET FORTH HEREIN SHALL BE DEEMED NULL AND VOID, AB INITIO. THE PARTIES ACKNOWLEDGE AND AGREE THAT THE EXCLUSIVE REMEDY UNDER THE FOREGOING LIMITED WARRANTY SHALL NOT HAVE FAILED OF ITS ESSENTIAL PURPOSE (AS THAT TERM IS USED IN THE UNIFORM COMMERCIAL CODE) PROVIDED THAT SELLER REMAINS WILLING TO REPAIR OR REPLACE DEFECTIVE GOODS WITHIN A COMMERCIALLY REASONABLE TIME. BUYER SPECIFICALLY ACKNOWLEDGES AND AGREES THAT THE PRICE CHARGED BY SELLER FOR THE GOODS IS BASED UPON THE LIMITATIONS OF SELLER'S WARRANTY OBLIGATIONS AND OTHER LIABILITIES AS SET FORTH HEREIN.

LIMITATION OF LIABILITY. NOTWITHSTANDING ANY OTHER PROVISION HEREOF, IN NO EVENT SHALL SELLER BE LIABLE TO BUYER OR TO ANY OTHER PARTY FOR ANY INCIDENTAL, SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES, LOST PROFITS, OR FOR ANY LOSSES, CLAIMS OR DAMAGES RELATING TO OR ARISING FROM THE USE OR OPERATION OF THE GOODS, AND IN NO EVENT SHALL ANY CLAIM OR RECOVERY OF ANY KIND EXCEED THE PURCHASE PRICE OF THE GOODS IDENTIFIED IN THE RELATED INVOICE.

5. SHORTAGE AND NONCONFORMITY

Any claim of shortage or that the goods do not conform with the specifications of the order or model must be made in writing within ten (10) days after delivery of the goods (as to which such claim is made) to Buyer or its nominees, but in no event shall the claim be later than within the time limit provided by the carrier or insurance company, otherwise such claim shall be deemed waived. Buyer may not return any goods claimed to be in non-conformity without Seller's prior written authorization. Goods returned without permission will not be accepted, including for credit, and will be returned to Buyer, F.O.B. Seller's plant. Any claim based on the receipt of damaged Goods must be filed with the carrier which delivered the goods. The samples, measurements, dimensions and weights contained in the Seller's catalogs, sales manuals, photographs and drawings constitute only an approximate guide. The Seller reserves the right to make any change which the Seller, in its absolute discretion, considers necessary. While the goods will be delivered principally according to specifications or standards or quantities agreed upon, insignificant deviations or insignificant changes in construction are permissible. The same applies to partial deliveries. In the event that Buyer has a verified claim of shortage or nonconformity of the goods to the specifications of the order or the model, and if such claim has been submitted within the required time limit as set forth above, the Seller shall, at its own expense, make up for the shortage of the goods, or replace or repair the goods, as the case may be, but in no event shall Seller be or become liable to Buyer or to any other person or persons for any loss in damage, direct or indirect, arising out of or caused by such incidents or for the loss of profits, business or good will. The liability of the Seller to Buyer, if any hereunder, for breach of warranty, contract, negligence or otherwise, shall in no event exceed the amount of the purchase price of the goods sold with respect to which any damages are claimed. Shipping dates are estimates unless parties expressly agree on time of the essence.

6. FORCE MAJEURE

The obligation of the Seller shall be modified or excused, as the case may be, for reasons of Acts of God, war, governmental law regulations, strikes or lock-outs, fire, breakdown of machinery, whether in its own business enterprise, or if for any other cause beyond Seller's control, the goods cannot be delivered or their delivery becomes delayed in whole or in part. In the above instances time for delivery shall be extended for the period of the delay caused, with the proviso, however, that either party may cancel in writing the undelivered portion of the order or contract if the delay exceeds six (6) months from the delivery date originally confirmed by Seller. In no event shall Seller become liable in the aforesaid instances to Buyer or any third party for consequential damages or business loss.

7. SHIPMENT AS UNIT

Each shipment by Seller shall be treated as a separate and distinct unit with respect, but only with respect to forwarding, terms of payment, and the making of claims by the Buyer: provided, however, that if the Buyer defaults in the payment of any obligation to Seller or any installments thereof, under any agreement between Buyer and Seller, or if Buyer refuses to accept any goods when tendered for delivery, the Seller may, on fifteen (15) days written notice to the Buyer, without prejudice to Seller's other lawful remedies, either defer further performance until the defaulted payments are made in full, or make future deliveries for cash in advance only, or treat the entire contract or contracts with Buyer as breached by the Buyer and pursue its remedies for breach.

8. BUYER'S REFUSAL OF DELIVERY

If Buyer refuses to accept delivery of any goods tendered for delivery, then Seller, without prejudice to Seller's other lawful remedies, may either store or cause such goods to be stored in a warehouse, for Buyer's account and at Buyer's cost, risk and expense, or sell such goods (without notice) to any purchaser at public or private sale, and hold the Buyer liable for any difference between (a) the contract price of the goods, and (b) the price at which goods are resold less the costs and expense of such resale including brokerage commissions, or restocking charges.

9. GOODS IN TRANSIT

If prior to delivery or while the goods are in transit, Buyer or Seller becomes bankrupt or insolvent, or any petition in bankruptcy or for the reorganization or for a state court receivership is filed against Buyer or Seller, as the case may be, then the other party hereto may forthwith terminate this contract by giving written notice of such termination. Such termination shall not affect any claim for damages available to the Buyer, provided that if Buyer is then indebted to Seller, the amount of any such damage claim shall be abated to the extent that the indebtedness of Buyer to Seller, as actually paid in money, is abated by any order of judgement entered or any plan adopted in any bankruptcy, reorganization, receivership, or similar proceeding. Such termination shall not prejudice the Seller's rights to any amounts then due under the contract. If Buyer becomes bankrupt or insolvent or any petition in bankruptcy or for reorganizing or if a state court receivership is filed against Buyer, then, at its option Seller may take possession of any goods theretofore sold to Buyer, in connection with which the full purchase price has not been paid, analogous to the terms and provisions set forth in Paragraphs 11 and 12 hereinafter.

10. DELIVERY

(a) Any indicated dates of delivery are approximate only, but NORD Gear will attempt to meet them whenever possible. (b) NORD Gear will not be liable for any penalty clauses contained in any specifications or order submitted unless agreed to in writing by an authorized officer of NORD Gear Corporation. (c) Unless otherwise agreed, delivery of the goods to any carrier shall constitute delivery to the Buyer, and thereafter the risk of loss or damage to the goods shall be upon the Buyer. (d) If the Buyer does not give delivery instructions to the Seller at least (10) days prior to the delivery date ex factory confirmed by the Seller, the Seller may deliver the goods to a carrier of its own choosing, at Buyer's cost and risk, or, at Seller's option, may store the goods on the pier or any warehouse, at Buyer's cost and risk. Any purchase price in such event becomes due and payable within ten (10) days of such storage.

11. PAYMENT OF PURCHASE PRICE

Time of payment is of the essence under the contract. Unless otherwise provided, terms of payment are 30 days net from the date of invoice with a 1% discount if paid within 10 days of date of invoice. Upon default in any of the terms of the contract, or failure to comply with any of the conditions thereof, or upon seizure of the property under execution or other legal process, or if the Buyer becomes bankrupt or insolvent, or any petition for reorganization or for a state court receivership is filed against Buyer, or if the Buyer makes any assignment for the benefit of its creditors or otherwise sells, encumbers or disposes of the goods, or if for any other reason the Seller should deem itself insecure, the full amount of the purchase price then remaining unpaid shall at once become due and payable at the option of the Seller.

12. BUYER'S DEFAULT

Upon the Buyer's default, the Seller may dispose of the merchandise in any manner that it deems fit and, if it desires to resell same, may do so at private or public sale, with or without notice, and with or without the property being at the place of sale, subject, however, to applicable laws. The Seller or its assigns shall have the right to bid at such sale and may become the purchaser of the property. The proceeds of the sale shall first be applied to the expenses incurred in retaking, repairing, storing and selling the goods, reasonable attorney's fees included, and then shall be applied to the payment of the balance due under the contract. Any surplus amount shall be paid to the Buyer. If a deficiency results after the resale, the Buyer agrees to pay such shortfall, together with reasonable attorney's fees, for the recovery of the goods incurred by the Seller. If upon the Buyer's default, the Seller elects not to resell any goods which it may possess, then the cost of repossession, including reasonable attorney's fees, shall forthwith be due and payable from Buyer to Seller. Buyer agrees to pay all reasonable costs and reasonable attorneys' fees incurred by Seller in enforcing Seller's rights against Buyer, including Seller's right to payment of the purchase price of the goods and Buyer's payment of all other amounts owing to Seller required under this Invoice and Conditions of Sale.

13. SECURITY INTEREST AND TITLE

In states and localities which are governed by the Uniform Commercial Code, this contract shall serve as security agreement, reserving in Seller a security interest until full payment of purchase price. The provisions of the Uniform Commercial Code regarding security interest shall have preference and apply if inconsistent with other terms of the conditions of sale. In states and localities where the Uniform Commercial Code does not apply, title to the goods shall remain in the Seller or its assigns until full payment of the purchase price. Buyer agrees to execute forthwith any and all documents in such a way and form as Seller may need for filing or recording the security interest under the Uniform Commercial Code with the proper registers or offices, or for filing or recording the conditional sales contract.

14. SALES AND USE TAX

Buyer agrees to bear and pay any sales or use tax in connection with the purchase hereof, and to hold the Seller harmless from payment. At the option the Seller, Buyer shall give evidence of payment or of exemption certificate.

15. INSURANCE

The Buyer shall keep the goods insured against damage by fire, water or other casualty as required by Seller, with a company acceptable to Seller, with loss payable to Seller for the total purchase price until the Seller is fully paid. Seller, if it so elects, may place said insurance at Buyer's expense; Seller may cancel such insurance at any time and without notice and may receive the return premium, if any.

16. MODIFICATION BY SELLER

Any contract may be assigned or transferred by the Seller, or the time for the making of any payment due by Buyer may be extended by Seller without derogation of any of the rights of the Seller or its assigns. Waiver by any party of any default shall not be deemed a waiver of any subsequent default.

17. RETURNED GOODS

No goods will be accepted for return unless authorized in writing by Seller. In all cases, transportation and restocking charges will be borne by Buyer.

18. PACKING

The Buyer will be charged for export packaging or other special packing desired. Cost for cartage to ship or transfer express will be added to the invoice. No credit will be allowed if no packing is required.

19. CHANGES/CANCELLATION

NORD Gear will not accept changes in specifications to a confirmed order unless such changes are requested in writing and confirmed back in writing. In addition, the purchaser must to agree to any additional charges that may arise from the change. Placing orders on hold or cancellation of orders require Seller's written approval, and are subject to cancellation and/or restocking charges.

20. BUYER'S RESPONSIBILITY AS TO MAINTENANCE

Buyer shall use and shall require its employees and agents to use all safety devices and guards and shall maintain the same in proper working order. Buyer shall use and require its employees and agents to use safe operation procedures in operating the equipment and shall further obey and have its employees and agents obey safety instructions given by Seller. If Buyer fails to meet the obligations herein, Buyer agrees to defend, indemnify and save Seller harmless from any liability or obligation with regard to any personal injuries or property damages directly or indirectly connected with the operation of the equipment. Buyer further agrees to notify Seller promptly and in any event not later than ten (10) days after notice or knowledge of any accident or malfunction involving Seller's equipment which has caused personal injury or property damages and to cooperate fully with Seller in investigating and determining the causes of such accident and malfunction. In the event that Buyer fails to give such notice to Seller or to cooperate with Seller, Buyer shall be obligated to defend, indemnify and save Seller harmless from any such claims arising from such accident.

21. MISCELLANEOUS PROVISIONS

(a) If for any reason a provision of a contract is legally invalid, then in such event the rest of the contract shall remain in full force and effect, except that the parties shall try to replace such invalid provision closest to their original mutual intentions. (b) This Invoice and these Conditions of Sale constitute the entire agreement between the parties regarding the subject matter hereof and supercedes all prior agreements, understandings and statements, whether oral or written, regarding such subject matter. No modification to, change in or departure from, the provisions of this Invoice and Conditions of Sale shall be valid or binding on Seller, unless approved in writing by Seller. No course of dealing or usage of trade shall be applicable unless expressly incorporated into this Invoice and Conditions of Sale. Any amendments to any contract or contracts between the parties shall be valid only upon the written consent of both parties.

22. NON ASSIGNMENT BY BUYER

Contract or contracts may not be assigned by the Buyer without prior written consent of the Seller.

23. APPLICABLE LAW AND VENUE

All contracts and their interpretation are governed by the applicable, substantive laws of the State of Wisconsin. Any litigation brought by the Buyer regarding this Invoice or goods purchased hereunder may only be brought in the Circuit Court for Dane County, Wisconsin.

Product Overview

UNICASE™ SPEED REDUCERS

HELICAL IN-LINE

- Foot or Flange Mount
- Torque up to 205,000 lb-in
- Gear ratios – 1.82:1 to over 300,000:1

NORDBLOC®.1 HELICAL IN-LINE

- Foot or Flange Mount
- Torque up to 26,550 lb-in
- Gear ratios – 1.88:1 to over 370:1

PARALLEL HELICAL CLINCHER™

- Shaft, Flange or Foot Mount
- Torque up to 797,000 lb-in
- Gear ratios – 4.26:1 to over 300,000:1

SCP SCREW CONVEYOR PACKAGE

- Shaft, or Flange Mount
- Torque up to 53,100 lb-in
- Gear ratios – 4.32:1 to over 1500:1

RIGHT ANGLE

HELICAL-BEVEL 2-STAGE

- Foot, Flange or Shaft Mount
- Torque up to 5,840 lb-in
- Gear ratios – 4.1:1 to 70:1

RIGHT ANGLE HELICAL-BEVEL

- Foot, Flange or Shaft Mount
- Torque up to 283,000 lb-in
- Gear ratios – 8.04:1 to over 300,000:1

RIGHT ANGLE HELICAL-WORM

- Foot, Flange or Shaft Mount
- Torque up to 27,585 lb-in
- Gear ratios – 4.40:1 to over 300,000:1

HIGH PERFORMANCE MOTORS & BRAKEMOTORS

INVERTER/VECTOR DUTY

- Standard or Energy Efficient
- Integral, NEMA or Metric IEC
- 1/6 to 250 hp

UNICASE™ SPEED REDUCERS

MINICASE™ RIGHT ANGLE WORM

- Foot, Flange or Shaft Mount
- Torque up to 3,540 lb-in
- Gear ratios – 5:1 to 500:1

FLEXBLOC™ WORM

- Modular bolt-on options
- Torque up to 4,683 lb-in
- Gear ratios – 5:1 to 3,000:1

MAXXDRIVE™ LARGE INDUSTRIAL GEAR UNITS PARALLEL HELICAL

- Modular bolt-on options
- Torque up to 2,027,000 lb-in
- Gear ratios – 5:1 to 1,600:1
